## LEGAL

Continued from Page 213

erty the wife must join with the husband in the execution of any instrument by which said real property or any interest therein, is leased for a longer period than one year, or is sold, conveyed, or encumbered; upon the death of the husband, one half of the community property becomes the property of the wife, as to which the husband has absolutely no power of disposition by will.

## Filing on Water

How can I file a claim on a stream of water? Can I procure blanks to be filled out and filed with the proper authorities, and who are the proper authorities?—Subscriber.

A person desiring to appropriate water must post a notice in writing in a conspicuous place at the point of intended diversion, stating therein that he claims the water there flowing to the extent of (giving the number) of inches, measured under a four inch pressure; the purposes for which he claims it, and the place of intended use; the means by which he intends to divert it, and the size of the flume, ditch, pipe, or aqueduct in which he intends to divert it. A copy of this notice must within ten days after it is posted be recorded in the recorder's office of the county within which it is posted. Within 60 days after the notice is posted the claimant must commence the work of diversion and prosecute it diligently to completion. A notice which states the foregoing matters is sufficient even though untechnically worded. Blanks may possibly be obtained at a stationery store. If a stream of water has been used for cattle and domestic purposes for 12 years, has the user acquired a right to the water even though he has taken no legal action? An actual appropriation of the waters of a stream is effective, to confer a prior right as against any person who did not have at the time of the diversion, a superior right. This is true even though there is no compliance nor attempt to comply with the provisions of the code as to notice of the appropriation and such actual appropriation will be good as against any subsequent appropriation for the purposes for which the water has been actually placed to a beneficial use and for those purposes only.

## BEAN GROWERS ORGANIZE

Bean growers producing about 300,000 sacks of beans have organized. Incorporation papers for a non-profit sharing organization have been filed, and it is expected that 90 per cent of the beans grown in the state—excepting Limas—will be marketed through this organization. This will mean nearly 3,000,000 sacks under one management.

The name chosen is California Bean Growers' Association and directors for the year are: George A. Turner, J. M. Bigger and Edward F. Harris of Stockton; Fred W. Kiesel, J. H. Glide, George F. Maddock, Emery Oliver, Lincoln White, A. T. Spencer and Charles F. Meister of Sacramento; Cline Bull and T. W. White of Marysville; Peter Cook, of Rio Vista and J. B. Mendenhall, I. L. Borden, F. L. Hoag and William K. Brown, of San Francisco.

**RHUBARB**  
PLANT YOUR LAND NOW TO WINTER RHUBARB  
You should get big crop by next fall. Others making \$1000 per acre, so can you with WAGNER'S GIANT—plant me other. Get your plants from originator and avoid disappointment. J. B. WAGNER, Rhubarb and Berry Specialist, PASADENA, CAL.

## Chicks by the Thousand

Written for California Cultivator By Jean A. Koethen

**H**OW to get the greatest number of eggs has been the problem of hatcheries from the mud ovens of ancient Egypt down to our own scientifically planned incubator cellars. If the Egyptian hatchery man could keep one egg out of four as pay for hatching and still give the owner of the eggs a profitable deal, our incubator experts of the twentieth century should do better, and they do. At a little hatchery which I visited last week in the environs of Van Nuys the output was running 80 per cent right along. The man who runs the incubators showed me the figures on slips of paper tacked on the front of each machine: "360 eggs; 32 clear, 14 dead germs. 500 eggs; 22 clear, 19 dead germs. 500 eggs; 25 clear, 14 dead germs. 500 eggs; 11 clear, 7 dead germs," and so on. These figures do not include the chicks which fail to get out of the shell, of which there are always a few. Such chicks are never helped out. If they cannot get themselves out they are killed, for they are more profitable dead than alive.

The Holly Poultry Ranch, as one may see by the neat sign over the front gate, was not started originally

as a hatchery, but its owner, B. R. Holloway, found after a number of years as a successful general poultryman that hatching was a specialty he could carry to such advantage that he has gradually increased the size of his hatchery and cut down the other end of the business. A limited number of hens are kept, about 1000 hens and 1000 pullets. The hens are mated to Barron cockerels, one cockerel to 15 hens, so that there may always be fertile eggs ready for the incubators. In addition to the eggs laid by the hens on the ranch many thousands are bought each week from the poultrymen of the Van Nuys district, a weekly trip being made to collect them, so that all may be absolutely fresh.

The capacity of the Holly hatchery is 60,000 eggs. On the first of February it was running at a little less than capacity, about two-thirds of the incubators being full, and a hatch of 4200 chicks had been taken off the previous week. From now on the incubators will run at full capacity.

The hatchery is a long building built of brick. A row of windows on each side near the ceiling provides abundant ventilation without drafts, and there are several doors which can be opened or closed according to the

weather. On cold nights all the doors and most of the windows are closed. This keeps the temperature from dropping as it would in a less carefully arranged building. On warm days every door and window is opened wide to keep the temperature down to 70 degrees, a temperature which is maintained day and night, with little variation during the entire season.

"Three things are absolutely essential to a good hatch," said Mr. West, the incubator operator. "The eggs must be fresh, that is, not over a week old, and they must come from vigorous, mature, breeding stock. If our eggs did not contain vigorous germs to begin with we could not turn out such a large per cent of vigorous chicks. Then we are extremely careful to follow the directions of the incubator manufacturers exactly. Lamps are cleaned every day and eggs turned twice daily. To save time in turning so many eggs we use, till the last two days of the hatch, a self-turning tray devised by Mr. Holloway, which turns the eggs with a single jerk. When the incubators are closed on the nineteenth day the eggs are placed on the regular trays with nursery tray underneath."

Hot water incubators of 500-egg capacity are used. The heat is kept at 102 degrees the first week and 103 degrees the rest of the time. At hatching time the greatest care is used to keep the heat close to 103 degrees. If

it goes much higher than this there will be cripples. In order that there may be plenty of moisture while the hatch is coming off the cement floor is sprinkled at frequent intervals, so that it is never quite dry.

The breeding stock is kept in two long houses, each 120 by 16, and divided into eight sections holding about 125 hens. Every section has its automatic fountain, protected by slats, so that no filth can reach the water, its mash hopper and electric light, for the hens must get to work at 4:30 a. m., and its broody coop. A thick layer of straw covers the floors, but shavings, which are less hospitable to mites, are used for nest litter. Three times a week the droppings boards are cleaned, and when they have been thoroughly scraped they are sprayed with a solution of cresol, one part cresol to 50 parts water. Such persistent cleanliness is bound to have its reward, and the reward in this case is a flock of as vigorous, prolific White Leghorns as can be found in California.

The ration of the breeders is simple. They have the P. C. A. mash, which all Van Nuys poultrymen use, always before them, and are given a scratch feed consisting of 45 per cent kafir corn, 45 per cent barley, and ten per cent split beans. The beans are not fed because Mr. Holloway considers them better than other grains, but because he happens to have them. The green feed is cup up barley.

Chicks from the Holly Hatchery are not sent through the mail. Such a trip is too hazardous. They are delivered by the hatchery's own truck to poultry ranches within 40 miles of Van Nuys, and are not left till they are safely installed in the brooder or brooder house. The boxes in which they are packed for delivery hold 100 chicks each, and each box is divided into four compartments. Twenty-five chicks in one of these straw-padded compartments can travel in great comfort, with practically no danger of crushing. The boxes are of three grades, which Mr. Holloway calls "first air," "second air" and "third air." This simply means that one box has large round air holes, the second smaller air holes, and the third quite small ones. The kind of box used is determined by the weather. If the day is very cold the box with the smallest air holes is used and covered besides, for there must be no chilling on the journey. It is by such care of every detail that Mr. Holloway has built up his business.

### A DOZEN GOOD TIPS TO POULTRYMEN

Do not keep mongrel stock. They are not high producers, and their eggs are not uniform as to size and color.

Keep laying hens separated from setting hens.

Gather eggs carefully twice daily.

Insist that your buyer candle and grade your eggs and that he pay a premium for "firsts" over "seconds." You cannot afford to produce the best and take a flat "case-count" price along with the producers of small, dirty, stale, inferior eggs.

The sale of infertile incubator eggs will never help you to establish a higher market price for your product.

Separate the male birds from the flock except during the breeding season. Fertile eggs are poor keepers.

Keep nests free from filth and provide plenty of them. It is the foul, dirty, unattractive nest that compels the hen to seek the weeds or some other undesirable place.

Market eggs in a standard egg case.

## You Feed The World

And to deliver on this big contract you need the car more than ever.

**A**ND it is important that the car be equipped with the tires that keep it going steadily, the year through at lowest upkeep cost. With Firestone equipment it is practically certain that your car will carry you wherever the work calls. They will get you there in comfort and on time, regardless of road and weather.

**FUEL-SAVING WITH FIRESTONE CORD TIRES.** The added size, with extreme flexibility of Firestone Cord Tires, means remarkable economy of fuel. There is easier, quicker response, an activity that supplements the motor power and gives the long coast with engine idle. This flexibility means, also, shocks absorbed, stone bruise and other injury avoided, longer tire life and they give road grip that means safe and confident travel.

**FURTHER IMPROVED FIRESTONE FABRIC TIRES.** Your car should have the benefit of the Firestone mileage features, the tougher, thicker tread, the added cushion stock and rubber between fabric layers. All these advantages increase resiliency and strength, giving you greatest comfort and longest wear. While doing your best in every hour of a long working day see that you have the most helpful facilities possible. In tires that means Firestone. Ask your dealer.

Los Angeles, Cal.

### AMERICAN SURFACE PIPE

At the bottom of your letter to advertisers just say "California Cultivator" and prompt reply is assured.

Never haul to town over rough roads or in an open basket or pan exposed to the hot sun.

You will have the largest number of "firsts" if you market at least twice a week.

In keeping eggs, provide a dry, cool, well-ventilated place. Fertile eggs must be kept below 68 degrees to absolutely check germination.

Never wash eggs, it destroys their keeping qualities.

Eggs are easily affected by bad odors. Do not keep in a musty grain bin, or in the vegetable cellar, or where they can absorb the odors of kerosene and gasoline.—C. S. Anderson, Colorado Agricultural College, Fort Collins, Colo.

### CONTROL LICE AND MITES

There is nothing that is more detrimental to the health and growth of young chicks than to let parasites gain a foothold in your flock. If you notice them becoming listless, their combs and wattles becoming pale in color and the young birds losing in weight, we advise making an examination of such birds and also of your houses and coops to see if you can discover evidences of either lice or mites. Chicken mites are one of the worst pests found in the poultry yard. The growth of the young chickens depends upon the digestion and assimilation of nourishing food. The blood carries this nourishment to the various portions of the body, and, as long as mites live upon the body of the chick and remove the blood as fast as it is made, there is little chance of growth. There is great danger of mites, especially in the warmer sections of the country. All coops and perches should be regularly examined and brushed with a solution of three to five parts of kerosene mixed with one part of crude carbolic acid or with some of the reliable commercial products which you see advertised.

### WATER IS CHEAP AND IMPORTANT

By T. E. Quisenberry

Neglecting the drinking pan, especially during warm weather, and allowing the chicks to go without water, sour milk or buttermilk during the dry hot days of summer will cause greater injury to the young stock than the lack of sufficient food. Also the use of stale, dirty and stagnant water will often lead to a complication of chick diseases and digestive disorders. Water is very cheap in price and it is pure neglect on the part of the poultry man to allow his chickens to suffer for water. A man who neglects to keep fresh water before his chickens at all times does not deserve to succeed. Moisture is an absolute necessity in the life of the young chick for the following reasons: (1) To soften the food in the crop; (2) to dilute concentrated food; (3) to regulate the temperature of the body; (4) to aid in the digestion and assimilation of the food; (5) to carry nourishment throughout the body; and (6) to carry waste out of the system.

The manures most suitable for asparagus are those strong in nitrogen. Horse, sheep and hen manure are excellent. Nitrate of soda gives good results. Potash is another important element. A good source of it is wood ashes but commercial forms are also good. A good plan is to apply the barnyard manures as a mulch in the winter. In the spring the coarse remains may be worked into the soil, but it is better to rake off the refuse and apply some finely rotted manure.

# HATCH THEM ALL!

A good strong chick from every hatchable egg is what you should demand of your incubator. That's what you are entitled to and that's what you get when you use a Buckeye.

It is built up to a standard—not down to a price. Twenty-five years of development have established the Buckeye as correct in principle and exact in operation. There is no guess work or gambling with valuable eggs and more valuable time. Every machine is sold under this sweeping Guaranty:

The BUCKEYE is guaranteed to hatch more chicks and stronger chicks than any other incubator; to operate satisfactorily in any temperature down to freezing; to require no artificial moisture and no attention to the regulator from the time the hatch is started until it is finished.

Perfect mechanical construction is also guaranteed. Any Buckeye or part thereof that does not fulfill our guaranty will be replaced any time within 40 days.

Used by more than half a million breeders, big and little, it gives universal satisfaction. Our guaranty goes with the first hatch. Beginners with the Buckeye stay in the business because it pays. They grow big by adding more Buckeyes. That is the greatest cause of our tremendous growth of sales.

## Stop Your Brooder Losses

Raise all those good chicks. You needn't lose one if you employ the brooder that is scientifically designed and built to do the work. The Standard Colony Brooder has no rival. It stands alone. Makes three chicks grow where one grew before. Cuts installation and operating cost to less than half—labor to less than a fourth. Burns hard or soft coal. Fire lasts twenty-four hours from one filling. Completely self-regulating.

There is nothing to it but a smooth cast iron stove, a galvanized steel hover and the regulating apparatus. Easy to clean and keep sanitary. No wooden walls or curtains to harbor vermin and dirt. No corners where chicks can be crushed.

## Write Your Own Guarantee

Write down what you want a brooder to do for you. We'll sign it, and will send your money back without argument if your Standard does not fulfill your guaranty.

Buckeye Incubators and Standard Colony Brooders are endorsed by all Agricultural Colleges and Experiment Stations. Sold by over 6000 dealers. Your dealer will be glad to show them in operation.

Write for Buckeye catalog. It contains the most wonderful testimonials of success in poultry raising you ever read, from Buckeye and Standard users.

## FIELD NOTES

Continued on Page 211

the five day butter fat contest there and other prizes. She is one of the 14 Register of Merit daughters of Marigold's Exile King and has a yearly test of 531 pounds of butter fat, 624 pounds of butter. Wanda has three daughters in the Register of Merit with yearly records. Have sold to Mr. James Bioggi of Manchester Gazette's Exile General, No. 149824, sired by Bellevue's General, dam Gazelle of Venadera. Gazelle is also one of the Register of Merit daughters of Marigold's Exile King. She has a test of 403 pounds of butter, 342 pounds of butter fat, made as a two year old with first calf. She is on test again as a five year old, making a good record. Gazelle, like Wanda, is one of the Nettie Underwood family, both being granddaughters of that great old cow, the fountain head of Venadera's leading family.

Bridgford Company, Knightsen, are making more good records with their registered Holsteins as the test season advances, and some of the best prospects yet to freshen. In recent tests in the herd the leader is Countess Katie Hengerveld, a most attractive heifer that made 31.15 pounds butter and over 600 pounds milk in seven days as a senior four year old. She is a daughter of Judge Hengerveld De Kol and out of a 26.60 pound four year old daughter of Johanna De Kol 2nd Lad. The next highest record is being made by Adirondac Wietske Dairy

Maid, just past five years old, who now has over 30 pounds butter to her credit in seven days and is milking at present over 90 pounds per day. She also is a very pleasing individual, and her great capacity connected with the nice increases she has made each time over previous records stamps her as a cow from which still greater things may be expected. She is the dam of Sir Johanna De Kol Rag Apple, the young bull that H. E. Cornwell of Modesto bought in the Second Sacramento Sale last spring. Empress Korndyke Pontiac, the junior two year old whose record was mentioned in a former issue, has increased her seven day butter record to 23.15 pounds and has over 96 pounds to her credit in 30 days. She is a daughter of Spring Farm King Pontiac and out of a daughter of Korndyke Butter Boy and a 28.17 pound three year old daughter of King Segis Pontiac. Nattaline Walker, another heifer that freshened at two years 16 days, made 21.02 pounds butter in seven days and will have about 86.50 in 30 days. She is the daughter of King Walker 5th mentioned in a previous issue. Tidy Abbekerk Korndyke, fresh at two years two months, now has over 18 pounds butter to her credit in seven days and is still gaining. She started off under handicap but is increasing and is a most promising looking heifer. She is sired by Sir Rag Apple Korndyke and is out of Tidy Abbekerk Princess Aline, 26.16 pounds butter in seven days and she is the dam of Changeling Tidy Abbekerk Wayne, 44.29 pounds

butter in seven days out of three-quarters, a world's record.

## NOTES AFIELD FROM BRIGGS

At the Glenn County farm of Chas. L. Leonard the combined herds of S. F. Williams and Mr. Leonard are being managed by these veteran Jersey

crease in wheat, holds its own against its great 1917 record in barley, an increase of 25,000 acres in rice, a ten per cent increase in grain sorghums and a big acreage going into honey sorghum for silo work. Sixty-five silos were built in 1917 and at least 50 more will be built this year according to the present outlook.

Anselmo of Sleepy Hollow

Official record of 32.70 pounds butter in seven days. Highest record daughter of Anselmo. Property of M. Holdridge, Modesto.

breeders, and good yearly records are looked for from the 12 selected cows now on test.

Glenn County has a 5000 acre in-

The annual meeting of the Orland Jersey Cattle Club for election of officers and review of the year's work will be held about March 20. The exact date will be announced later. Several Jersey men from a distance will be present and a banquet will be served.

J. J. Flaherty of the First National Bank of Orland who has done so much to make the Orland district a Jersey center, states that he has received calls for good registered young stock from San Jose and other parts of the state.

E. J. Falk, manager of the Glenn County fair at Orland has set the fair dates for September 16 to September 21. Preparations are now under way to make it a bigger and a better fair than ever. Last year's profits and further appropriations are being used to erect new stock yards and corrals, poultry building and hog quarters. General exhibit will be housed in three large tents.

The A. J. Morey Jersey herd at Orland has a number of heifers coming fresh this year. He and his working partner, Mrs. Morey, plan to build a 100 ton silo and will then test all their milkers.

W. G. Garnett of Orland will build a 100 ton silo this season to care for the needs of his growing Jersey herd. Mr. Garnett says his luck has changed: for a time his cows all had bull calves but of late heifers are the rule.

A Jersey cow in the Orland district, King's Lass of Sunny Bank 238253, owned by W. G. Garnett, has just made a year's record of 521.60 pounds butter fat, dropping a heifer calf 59 days after completion of test. Her previous yearly test that placed her in the Register of Merit was completed on September 15, 1914, making a record of 463 pounds and 12.1 ounces of butter fat with an average per cent of fat of 6.135. She was born August 10, 1909. Her sire was King's Valet and her dam is N. H. Locke's great cow, Empress Lass.

River Garden Farms of Knights Landing, are putting out 250 acres Bartlett pears and about 400 acres of French prunes.

Elmer Armfield of Woodland is planting 450 acres to orchard, 200 acres almonds, 70 acres olives, the balance to Black Mission and Smyrna figs.

About 95 per cent of Yolo County's raisin growers have joined the Association on the new six year contracts.

About 175,000 acres of grain, including rice, will be grown in Yolo County this year. Its present condition is about 80 per cent of normal. Rains within a month will give a normal crop.

Horticultural Commissioner Gould of Yolo County declared war and started a squirrel drive in every sector of his district February 10. He hopes to make a 100 per cent clean up. Gould plans to use all up-to-date

## Silent, Steady, Sure In Its Work

**Lalley-Light  
Brings New Cheer  
to the old Home**

**L**ALLEY-LIGHT, in operation, is practically as silent as light itself. With it in the basement, you can barely hear, on the first floor, the low hum of its running.

It is quiet because its engine is designed and built expressly to run a direct-connected electric generator. That means, in addition, increased economy and efficiency.

Because it has big ball bearings to prevent wear—and noise—at every point where split babbitt or roller bearings are ordinarily used.

Because it has but three moving parts—no valves, no springs, no cams, to clatter and chatter.

Because the engine's patented construction permits it to run as smoothly and steadily as a perfectly governed steam engine.

Lalley-Light—with a record of seven successful years—brings electric light and power to the farm, and with them every convenience and comfort and cheer which electricity has conferred on mankind.

It gives you safe light—and eliminates fire risk in that direction. It is so simple that a woman, a boy, or even a girl, can run and care for it as well as a man.

It is practically two plants at the cost of one—for either the generator or the battery supplies current, independently of the other.

Generating Plant is 27 inches long, 14 inches wide, 21 inches high. Storage battery is included in complete outfit.

Lalley-Light is a complete plant—direct-connected engine and generator, and storage battery. No extras to buy, aside from the wiring, fixtures and bulbs you must supply for any plant.

Consider the comfort of Lalley-Light on the farm. Unlimited light always and instantly at your command, in house and barn; power for pump, churn, separator, and so on. Greater convenience and labor-saving than you have ever had—all for a few cents' worth of gasoline per day.

Do not put this paper aside until you send us a postal card with your name and address. In return, we will send you, free, our book completely describing and illustrating Lalley-Light; and tell you what the plant complete will cost delivered at home.

We will also tell you the nearest place where you can see Lalley-Light in actual operation. Be sure to write today.

Lalley Electro-Lighting Corporation  
1858 Mt. Elliott Ave., Detroit, Mich.

# LALLEY-LIGHT

ELECTRIC LIGHT AND POWER FOR EVERY FARM

German devices against the enemy from poison to gas.

Horticultural Commissioner Gould of Yolo County and his corps of assistants have inspected about 500,000 trees for this spring's planting. About 400,000 of these trees were grown in the county. They are of fine quality, the county being free of peach borer and other insects.

#### AUCTIONING THE HOGS

Continued from Page 207

"Sometimes the hogs are knocked down to the farmers' own buyer and in that event the farmers through the farm bureau own the hogs collectively. There is usually room for only a slight difference, which is usually adjusted on a give and take basis, making things satisfactory all around. Where the bureau has its own auctioneer and pays its own bills there is a minimum of expense connected with the selling."

Asked about cars Mr. Kreutzer told of one serious but amusing incident occurring after a recent sale:

"We had arranged everything we thought and had cars promised three days before the sale which was very successful. Evening came with the yards full of hungry, squealing, disgruntled hogs and no cars. The farm bureau got busy with telegrams and I think everybody but Herbert Hoover and President Wilson who had anything to do with transportation got telegrams from us as long as the recent declaration of war. It took \$52 worth of rolled barley at a meal to feed those hogs and we fed them four times before we got our cars and we were doing business on a one per cent margin. The hogs ate all the barley and considerable of a hole in our reserve fund but we are still doing business. The farm bureau always has more hogs at each sale than are expected. There will be several more sales in the county in the near future due notice of which will be given."

#### BIG TRACTOR DEMONSTRATION AT UNIVERSITY FARM

On April 17, 18 and 19 a tractor demonstration, that promises to draw visitors from every part of the Pacific Coast, will be held at Davis, on the University Farm. The demonstration will be under the auspices of the California Tractor and Implement Association, an organization composed of the manufacturers, and California representatives of manufacturers, of tractors and tractor implements. The association was formed for the chief purpose of securing cooperation in the conduct of a demonstration that would be educational in its nature and that would really show the visitor what the tractor is capable of doing and

what equipment is offered for various kinds of work.

The days chosen for the holding of the demonstration are the Wednesday, Thursday and Friday preceding the Annual Farm School Picnic on Saturday, April 20, so that farmers who attend the demonstration may remain over for the picnic without having to make a special trip.

Several features will mark this demonstration that are entirely novel and that will greatly increase its interest for the farmer. Particulars will be given next week.

#### COUNTY HORTICULTURAL COMMISSIONERS

President Sharp of the state association of county horticultural commissioners announces that he has appointed Commissioner Brock to succeed Roy K. Bishop on the executive committee. The committee is now composed of Chas. F. Collins, chairman, Fred P. Roulland, John P. Coy, A. A. Brock and F. W. Waite.

#### THE FARMERS FIGHT

The Farmers' Protective League of California has been a power in California during the past four years and proposes to continue to look after the welfare of the farming interests, i. e., providing the aforesaid interests wish it. But as it has some problem the league is issuing the following statement or appeal to farmers:

#### LAST CALL—LEAGUE WANTS HELP!

The Farmers' Protective League is entering into its fourth year. For three years it has fought the farmers' fight, through two elections and before two sessions of the legislature. It has accomplished much. You have been benefited by it unbeknown to yourself. It is the only body of its kind in the state, organized and officered by farmers alone, for legislative work. As in frequent affairs of this kind, it has no entangling alliances or leadership by other interests who generally lead and gently exploit the farmer.

In the coming year there occurs an election of legislative members and a governor. More members of our calling from rural districts are desired in both houses of that body. Rural matters are largely in the hands of officials incompetent to understand rural needs, and ever ready to see that farmers do not fill such places. The fault is our own. The organization of all classes of farmers, of all callings of the industry, is essential, that each may help the other in his needs.

The present officers of this league have labored unremunerated, long and hard for the good of any and all classes of farmers in this state. In many instances, in fact in most in-

stances, thanks have not even been forthcoming for their efforts. Voluntary praise and appreciation has been received sparingly. They have carried the load as long as possible. More help, new blood, new directors on the board and more enthusiasm is now needed.

You, who read this, it is your affair. You must take hold of it in your locality. Workers are necessary in each of the 58 counties of the state to organize at once. Time is short. A fund of \$50,000 is desired. This is a stingy small sum if properly divided among all farmers. If a few have to bear it it is a large one.

What does it matter how large crops we raise or the price obtained if we permit others to make laws practically confiscating our efforts? This organization is a going one. It is ready with files of information and data, with experience and understanding. If it should be compelled through your lack of interest to cease activity, you will sustain a loss not replaceable without great expense and time.

Every reader has a duty. That duty is to get busy in your own community and county to the end of organization. It will mean some work, but it will mean just as much a part of business as to plant and harvest.

One without the other is work and effort incomplete.

Last call. Are you all done! If you are, the hammer falls!

## PACIFIC REDWOOD PIPE

embodies these advantages:—

It has 20% greater carrying capacity than either riveted steel or cast-iron pipe, costs much less and lasts at least as long as the latter and several times as long as the former.

Redwood is immune to the attacks of insects, acids and alkalies.

It is not affected by heat or cold. Arid or humid climates do not reduce its life.

Here we have long life, continuous service, complete satisfaction, and at a cost so low that none should lay any other than Pacific Redwood Pipe.

Our engineers will be glad to give you an estimate of the cost of the pipe you should have, if you'll tell us the conditions creating your needs.

### RED-ROBED FRANCE

The Huns stripped off my own green gown  
And left me stark and bare;  
My sons, they spread a red robe down  
And wrapped me in it there.

The garb they brought was red as blood—  
The robe was red as flame;  
They veiled me in it where I stood  
And took away my shame.

Was ever web so costly wove  
Or warp so glorious spun?  
I'll wear no vestment prized above  
That wide and scarlet one.

Though younger sons, some happier day,  
Weave me a fair green gown  
Anew, or bid me don array  
Of corn-ripe gold and brown.

The names (like breads, told one by one)  
My heart will still repeat;  
Will call, with tears, each dear, dear son  
Whose red robe wrapped my feet!  
—Everybody's Magazine.

### NOW WHICH IS THE HUSBAND?

F a woman's husband and her brother trade heads, then which is her husband?

Such is the rival of the riddle of the Lady and the Tiger now put forth for people to puzzle over. This perplexity is set forth in one of the fairy tales of ancient India just translated from the Sanskrit by Professor Arthur W. Ryder, head of the department of Sanskrit of the University of California, and now published as a volume entitled "Twenty-two Goblins."

"Long ago there was a king named Glorybanner. His city was named Beautiful. On a certain day in each year a great crowd of people came there on a pilgrimage to bathe in the lake called 'Bath of Gauri.'

"One day a man named White came there from another village to bathe, and the youth saw a maiden who had also come there to bathe. Her name was Lovely. She robbed the moon of its beauty and White of his heart. His father went to the house of Lovely's father and asked that the girl might be given to his son. Then when the time came, White was married, and went happily to his father's house with his sweet bride.

"Now one morning White set out for his father-in-law's house, together with his brother-in-law and Lovely. When they came to the city Beautiful they saw the great temple of Gauri. And leaving them without, White went in and bowed before the goddess whose 18 arms had killed the horrible demons and whose lotus feet were set upon a giant that she had crushed. And when he had worshipped her an idea suddenly came to him. 'People honor this goddess with all kinds of living sacrifices. Why should I not win her favor by sacrificing myself?' And he fetched a sword from a deserted inner room, cut off his own head, and let it fall to the floor.

"Presently his brother-in-law entered the temple. When he saw his brother-in-law with his head cut off he went mad with grief, and cut off his own head in the same way.

"Then Lovely entered the temple, and when she saw her husband and her brother she cried 'Alas! this is the end of me! What is my life good for now?'

"Before attempting to kill herself she prayed to the Goddess Gauri. Then she tied a rope to an ashoka tree, but while she was arranging the rope about her neck a voice from heaven cried 'Do nothing rash, my daughter! Leave the rope alone! Though you are young, I am pleased with your unusual goodness. Place the two heads on the two bodies, and they shall rise up again and live through my favor!'

"So Lovely left the rope alone and joyfully went to the bodies, but in her great hurry and confusion she made a mistake. She put her husband's head on her brother's body and her brother's head on her husband's body. They then arose, sound and well, like men awakened from a dream.

"Then Lovely noticed that she had made a mistake in their heads, and she was troubled and did not know what to do.

"Now, then, which was her husband.

### MIL O MUFFINS THE BEST EVER

If you haven't yet tried milo meal, make haste, you're missing something extra good. The Cultivator force has been enjoying muffins, hot cakes, etc., from milo meal sent in by W. H. Macy of Orland who grinds the yellow milo on his own farms, as you may have noted in last week's Cultivator.

Here is one recipe that was very satisfactory:

One and one-third cups of milo meal, two-thirds cup flour, two heaping teaspoons baking powder, pinch of soda, one cup sour milk, tablespoon sugar, pinch salt, two tablespoons shortening (if drippings are used, add no more salt). Bake in hot greased muffin pans in quick oven.

Here is another, using eggs:

One pound milo maize flour, one pound wheat flour, one-half pound shortening, one and one-half ounces baking powder, four eggs, four ounces sugar, one quart milk. Cream sugar and shortening, add eggs, milk, milo maize and flour and baking powder sifted together. Bake in muffin pans.

### More Recipes Wanted

If you have tried milo, kafir, feterita, rice flour, barley meal, or any other wheat substitute in quick baking powder breads, tell the rest of us through the Cultivator how you did it. As you will note we are also asking this week for yeast bread recipes, using substitutes for wheat flour.

For these bread recipes, either for yeast or quick breads, we will continue subscription to the Cultivator three months. Please send with your recipes name and address of one to whom you wish extension credited.

### HOUSEHOLD QUERIES

#### Bread with Wheat Substitutes

Please give us proven recipes for making the new kind of bread from white flour and substitutes combined. —Subscriber, Pomona.

To this subscriber we sent copies of the Cultivator of January 19, 1918 in which on Page 92 are two recipes for yeast bread, substituting one-third corn meal and one-third stale bread crumbs; Cultivator of December 15, 1917, Page 621, substituting one-half oatmeal, one-half barley, one-half mashed potato, or equal amount of rye; Cultivator of October 13, 1917, two-thirds corn meal.

The Cultivator will be glad to receive from our housekeeper subscribers other recipes which they have tested and found good for making bread with wheat and substitutes. A three months extension of subscription will be placed to the credit of all sending such recipes that are published in the Cultivator.

### PROOF

Sponge: "I think a street car has just passed."

Blotter: "How yuh know?"

Sponge: "I can see its tracks."

## The Cultivator Patterns

8723—Ladies' Slip-on Blouse. Cut in sizes 36, 38, 40 and 42 inches bust measure. This is a slip-on blouse with kimono sleeves; the front and back panels are in square apron effect.

8117—Child's Box Plaited Dress. Cut in sizes 4, 6, 8 and 10 years. This little dress is cut in one piece from shoulder to hem and it is slashed in front for slipping on over the head.

8702—Ladies' Dress. Cut in sizes 36, 38, 40 and 42 inches bust measure. The simple waist has a graceful shawl collar and square vest of contrasting color and material; the skirt has two gores, and it is slightly gathered all around.

8117—Child's Box Plaited Dress. Cut in sizes 8 years. This is a one piece dress belted in long waisted effect and may be made with long or short sleeves.

8703—Girls' Dress. Cut in sizes 6, 8, 10, 12 and 14 years. The waist is draped in surplus effect; a one-piece skirt with straight lower edge is gathered to the underwaist.

8173—Ladies' House Dress. Cut in sizes 36, 38, 40, 42 and 44 inches bust measure. A plain waist and three-gored gathered skirt are joined at the normal waistline.

8705—Ladies Four Piece Skirt. Cut in sizes 24, 26, 28, 30 and 32 inches waist measure. The front gore is in panel effect and the side and back gores are gathered.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH.

### HOW TO ORDER PATTERNS

Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2 cent) stamps for each number. In order to furnish our readers with the very latest New York City styles, all pattern orders are filled in New York City. Therefore, we promise to deliver all patterns ordered within two weeks; we guarantee safe delivery of all patterns. Address

CONTRIBUTED SANDWICH  
RECIPES

Ida R. Wehmeyer, Vista

Grind raisins and half as many nuts as raisins. Mix with enough cream to make a thick paste. Spread between thin slices of bread. A date paste may be prepared in same way, only adding a little lemon juice.

Another: Cold fried liver makes delicious sandwiches. Chop very fine, season rather highly. Add minced onion, a hard boiled egg and dressing enough to spread easily. Serve with lettuce leaves between thin slices of rye bread.

Minnie G. Childs, Tustin

Avocado and Walnut Sandwich—Peel and mash avocado, season with salad dressing, mixing to consistency of thick cream. Spread on thin slices of unbuttered white or brown bread, sprinkle with chopped walnuts, press bread firmly together and cut in triangle shape. Make plenty, they are good.

Hot Cheese Sandwich—Cut bread thin, butter sparingly, cover with sliced or grated cheese. Press firmly together. Have ready a hot skillet, place sandwiches therein, turning them so they will be a very delicate brown on both sides. I brush the skillet with a little butter to prevent sticking. A delicious sandwich to serve with hot cocoa on a cool evening. Cut in long pieces and serve on hot plate.

Mrs. C. W. Leeper, Lancaster

War Sandwiches of 1918—Take a rabbit (jack rabbit), soak in salt water over night to remove blood. In morning remove from salt water, cut slime off or scrape well, then par-boil in soda water 30 minutes or perhaps a little longer, being careful not to cook soda into meat. Take out, put on some more water, simmer awhile to take taste of soda out, then cook until tender in the third water, after adding two bay leaves, and some like sliced onion too. When meat is tender chop fine or run through food chopper, place in vessel (crockery, enameled or porcelain), cover with lid, which fits down tight on meat and place heavy weight on same. Put in cool place (let freeze if cold enough). When pressed well it is ready to slice and use in sandwiches. Forget not to salt and pepper to taste before pressing. Rabbits of any kind will do, but in most places the jack rabbits are more plentiful. If for any reason you find the meat is too dry you can put a little of the last water it was boiled in with the meat before pressing, or better still perhaps use some salad dressing.

DELICIOUS BEAN-OLIVE  
CROQUETTES

Try this and see how you like it.

One pint boiled blackeye beans, mashed, one egg, one-half cup ripe olives, two tablespoons flour, dash of red pepper, or part of chili cut fine, salt and black pepper to taste. Form into small cakes and fry.—Mrs. M. H. Dewey, Oroville.

## REAL PENALTY

"I have come here," said the angry man to the superintendent of the streetcar line, "to get justice; justice, sir. Yesterday as my wife was getting off one of your cars the conductor stepped on her dress and tore a yard of frilling off the skirt."

The superintendent remained cool. "Well, sir," he said, "I don't know that we are to blame for that. What do you expect us to do? Get her a new dress?"

"No, sir. I do not intend to let you off so easily as that," the other man replied gruffly. He brandished in his right hand a small piece of silk.

"What I propose to have you do," he said, "is to match this silk."—New York Times.

## MAKING HOUSEWORK EASIER

Written for California Cultivator by  
Ellen C. Cannady

Spread old newspapers down where they will catch dirt, ashes, lamp trimmings and soot. If the range is wiped with soft paper after cooking greasy food, and washed with suds once or twice a day, it will look better and be cleaner than if it is kept blackened. Old papers may be used to lighten many a disagreeable task and save the hands wonderfully.

If the housewife will wear sleeve protectors, oilcloth aprons and rubber gloves while washing dishes, dusting or mopping the floor her laundry work will be greatly lessened. Cover the pantry shelves with oilcloth and the kitchen table with zinc or heavy tin, and it will be easy to keep them clean.

The equipment and tools for a certain kind of work should be kept together. If there is a closet near the range for the kettles and pans, and shelves above the work table for baking powder, sugar, spices and things used in making bread or cake, you will not have to walk back and forth across the room for everything that is needed. Use glass fruit jars for cereals, coffee, tea and cocoa, and they can be kept dry and airtight. It will not be necessary to label them, for one can see at a glance what they contain.

A soft soap made by pouring one gallon of boiling water over a pint of Gold Dust washing powder will be a great labor saver. It is excellent to remove grease from the kitchen sink; add a little to a pailful of warm water when you mop the kitchen floor or wash the painted woodwork. Nothing will clean oilcloth or linoleum so quickly without injuring the colors. In fact you will find a great many uses for it, and after you have tried it you will not be willing to do without it in your kitchen.

If sheets are folded straight and even when they are taken from the line, and the hems and selvedge edges ironed, they will be ready for use.

Have a high stool in your kitchen and use it instead of standing while preparing vegetables, beating eggs, making cake and ironing. You can do the work just as quickly and as well.

If you will put the ground coffee in a perforated aluminum cup with a tight fitting lid and lower it into the boiling water in the coffee pot, it will answer every purpose of an expensive percolator and is easy to care for. After it has boiled a few minutes the cup is taken out and the coffee is set where it will keep hot without boiling until it is served.

## HE UNDERSTOOD

The pale-faced passenger looked out of the car window with exceeding interest. Finally he turned to his seat-mate.

"You likely think I never rode in the cars before," he said, "but the fact is, pardner, I just got out of prison this mornin', and it does me good to look around. It is goin' to be mighty tough, though, facin' my old-time friends. I s'pose, though, you ain't got much idea how a man feels in a case like that."

"Perhaps I have a better idea of your feelings than you think," said the other gentleman, with a sad smile. "I am just getting home from Congress."—Argonaut.

## SPEAK SOFTLY

Speak softly; it is better far

That angry words be barred.

Speak softly wheresoe'er you are—  
But keep on thinking hard.

Rough, lb., 3.9¢@4c.  
Cleaned, central, No. 1 hard, 6.90¢@7.00.  
Brewers' and screenings, nominal.

#### MAY

Under date of February 9, Scott, Magner & Miller says:  
Receipts past week, 1192 tons. Demand is very light in San Francisco and although receipts are firmly held prices are lower than asked for same grade in the interior, to say nothing of the freight which must be added. The demand from the lower Coast sections where very little rain has fallen continues good, and we believe that should this section get a good drenching in the next week the demand for hay from there would increase because everyone would then figure on feeding their stock until such time as grass was available. Without rain many, on the contrary, will probably have to allow their stock to perish, as it would be next to impossible for them to ship hay in at the present prices to keep them going. Although we have had very nice weather with from one inch to three inches of rain in the Bay sections very little rain has fallen in the

southern Coast section and the lower San Joaquin Valley where it is so badly needed. Referring to the proclamation of the president recently issued pertaining to the licensing of hay dealers, we are just in receipt of a telegram from Washington stating that only those who handle in the aggregate \$100,000 worth of feed stuffs per annum, including hay, will be required to take out the license. This will relieve many of the small dealers from the trouble of making out monthly reports of sales.

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the hay market. For prices to consumers charges of cartage, commission and handling must be added according to conditions.

Fancy Wheat Hay, (light 5 wire bale) ..... 29.00@30.00  
No. 1 Wheat or Wheat and Oat Hay ..... 27.00@29.00  
No. 2 Wheat or Wheat and Oat Hay ..... 25.00@27.00

Feed ..... 3.00@3.10  
New Black ..... 3.25@3.50  
Rye, Utah ..... 4.00@4.25  
Wheat—Government prices: Common white hard, base price is \$3.50 per central, or \$2.10 per bushel of 60 pounds delivered in terminal warehouses in bulk; soft wheat, base price 2 cents per bushel less, or \$2.08 per bushel; white club (including Sonora), \$2.06 per bushel. If wheat, after cleaning, weighs 60 pounds or more to bushel, base price stands; if 58 to 60 pounds to bushel, 3 cents per bushel reduction; if 56 to 58 pounds, 6 cents per bushel less; if less than 56 pounds, grain becomes sample grade and sells on its merits up to within 1 cent per bushel of 56-lb. wheat. Sacked wheat 4 cents per bushel more, less tare for weight of sacks.

#### FEEDSTUFFS

These prices applicable to San Francisco, with \$1.00 less at Sacramento and Stockton, are for cash at the mill in carload lots, and include sackage, with an additional rate of 50 cents per ton in less than carload lots.

Wholesale prices per ton. Prices fixed by food administration as San Francisco price; Sacramento and Stockton \$1.00 less on carlots at mill door:  
Bran ..... 34.00@35.00  
Middlings ..... 41.50@42.50  
Mixed Feed ..... 37.00@38.00  
Shorts ..... 35.00@36.00  
Rolled Barley ..... 66.00@67.00

#### SEEDS

Prices in round lots, lb.:  
Millet, recleaned ..... 4½¢@5½¢  
Alfalfa ..... 20¢@21  
Flax ..... 6¢@6½¢  
Hemp ..... 4½¢@5½¢  
Rape ..... 2½¢@3

#### Citrus Fruit Market

Los Angeles, Feb. 13, 1918.

The weather is moderating in the East and orange prices are improving. A few cars of frosted fruit still on hand are selling around \$1.00, but good Navels are

bringing around \$5.00 for small standard sizes; large sizes heavily discounted. The small crop in California and the traffic congestion have matched up this season; if California had had her usual heavy crop to move, there would have been much red ink from delayed and spoiled fruit. Of course some cars caught in the Eastern blizzards have been frozen and sold at a loss, but on the whole the returns in cash to the growers of the state are estimated this year at about 75 per cent of normal, although the crop is showing up about 40 per cent in volume. Mild weather is maturing the Valencias early.

Lemons are bringing good prices in all markets, and a big yield is expected from the next two months' pickings. Heavier shipments of foreign lemons are being received than last year.

#### Shipments

Shipment of oranges from Southern California to date since November 1, 1917: Oranges, 3535 cars; lemons, 840; total, 4375. Last season same date: Oranges, 6402; lemons, 1418; total, 7820. From Central California to date: Oranges, 1881; lemons, 102; total, 1983. To same date last season: Oranges, 3894; lemons, 146; total, 4130. From Northern California to date: Oranges, 202; same date last season, 842.

#### AT THE AUCTIONS

February 6  
New York: 5 cars Nav., 1 Val., 1 Lem. Nav. \$4.00-\$6.05, Val. \$2.65, Lem. \$2.45-\$3.75.

February 9  
New York: 8 cars. Nav. \$3.70-\$5.20.  
February 11  
New York: Nav. \$3.85-\$4.75.  
No sales in Boston or Philadelphia.

#### THE TRUCK CROP SITUATION

For the week ending February 1, 1918. R. G. Risser, assistant truck crop specialist reports that for Southern California personal field inspection showed the cabbage crop in a more thrifty growing condition, but aphids still present. Growers are receiving from \$50 to \$65 per ton, representing a strong advance.

Cauliflower is needing rain. The height of the season has been reached, but three or four months of shipping are still expected. Aphids have been checked.

Lettuce is showing frost injury around Los Angeles, necessitating trimming of heads. Size and color of shipping stock are below normal. Imperial lettuce is making half of a normal yield. Size and quality is variable. Some heads are making seed stalks. Some immature stock is going out but efforts are being made to prevent such shipments.

#### WITTE IRRIGATING ENGINES

#### Kerosene-Distillate 2 to 22 H. P

Pump your water with a WITTE. All you need is a centrifugal and my Special Model Kerosene-Distillate Engine. I can lay your engine down at least cost. Save the middleman's profit—Get your engine NOW, while prices are still low. Have reliable power for all your work. Made in standard sizes—2, 3, 4, 6, 8, 12, 16 and 22 H. P. Battery or magneto equipment. I am in a position to offer you the best prices and make immediate shipment. 30-Day Trial—5-Year Signed Guarantee. Largest exclusive engine factory in the world selling direct to user. Cash, Payments, Bank Deposit or No Money Down. Suit yourself as to terms. Don't make a deal until you have investigated my offer.—Ed. H. Witte, President.

# THE SANDUSKY TRACTOR

"THE LITTLE FELLOW WITH THE BIG PULL"

## The Tested and Guaranteed Tractor

With An Organization That Stands Back Of It

### An Appreciation

November 8, 1917.

I have been highly gratified by the treatment I have received from all your local and traveling representatives.

Your substantial branch house building first drew me, after which an examination of the machine convinced me that you had yourselves first paid the price in producing a tractor worth selling and now I find that the service which your representatives have so cheerfully and conscientiously given me since buying my Sandusky is the best proof possible of your determination to make The Sandusky Tractor of real value to your customers.

I shall certainly never be afraid to put myself in your hands when looking for farm machinery of any kind.

Very cordially yours,

(Signed) N. J. NOBLE.

(Address furnished upon request.)

Mr. Noble's letter reproduced herein carries a worth-while message to the man who is thinking of buying a tractor. An examination satisfied him that we had "first paid the price in producing a tractor worth selling." Our free service, he adds, "is the best proof possible of your determination to make The Sandusky Tractor of real value to your customers."

Last, but not least, Mr. Noble says: "I shall certainly never be afraid to put myself in your hands when looking for farm machinery of any kind."

There are thousands of Sandusky Tractor users who are just as enthusiastic about, and as appreciative of, the ideals that our President, Mr. J. J. Dauch, started striving for more than fifteen years ago.

First, to satisfy himself on his own work that he had a tractor "worth selling," and then standing back of it in such a way as to make it of

### "Real Value To The Customer"

This same spirit has been developed throughout the entire institution, from the engineers and mechanics in the factory to the men in the field, including the many dealers who are now establishing Sandusky Sales Rooms and Service Stations throughout the country under our policies and guidance.

Both the 10-20 Model J and the 15-35 Model E Sandusky Tractors are tested and guaranteed—tested through years of practical experience in the field and guaranteed by an organization capable of fulfilling its guarantees—one of the oldest exclusive tractor manufacturers in the country.

Our booklets "Power On The Farm," issue J-74 covering the 10-20 Model J, and issue E-74 covering the 15-35 Model E Sandusky Tractor, cover in detail their excellent design, high-grade construction and exceptional abilities.

Write for either or both copies today. Outline your local conditions and requirements fully so that we may know whether your land is adapted to power farming and if so, what tractor to recommend. Our recommendation is an UNQUALIFIED GUARANTEE OF SATISFACTORY OPERATION. We give you an opportunity to TRY IT ON YOUR OWN WORK, and back this up with the only GUARANTEED FREE TRACTOR SERVICE plan in existence. Write today.

## TEAGUE QUALITY CITRUS TREES

AWARDED THE GOLD MEDAL AT FOUR INTERNATIONAL EXPOSITIONS.

For Productive values, fine quality of fruit and vigorous growth Teague's bud-selected, (pedigreed) properly trained and carefully handled orange and lemon, pomelo and lime trees are the trees to plant. An experience covering a third of a century warrants the assertion that Teague Quality Citrus Trees possess these qualifications in a superlative degree. All the standard commercial sorts, and garden and ornamental varieties; the largest assortment of citrus trees in America. . . . We invite correspondence from intending planters. . . . Consultations on citrus planting by appointment. 1918 Price list just out; send for a copy.

## Spread Your Straw

It has big plant-food value. Let it help you get bigger yields. Use it to top-dress winter wheat, rye and similar crops. Straw acts as a mulch—prevents winter killing—keeps plants from smothering after heavy sleet—keeps the soil from blowing away from the plant roots. Spread your straw with this two-in-one machine. Get a

## JOHN DEERE SPREADER with Straw Spreading Attachment

This simple attachment spreads all kinds of straw—does a real job. Spreads it uniformly, heavy or light, as you desire.

It has this big advantage—it handles perfectly the heavy, partly rotted straw found in the bottom of straw stacks.

One man can load and operate it. Only two levers—one lever puts both beaters in and out of gear, the other regulates the quantity.

To spread manure take off the Straw Spreading Attachment—a thirty minute job for one man and you have the regular John Deere Spreader.

If you have no straw to spread at this time, get a John Deere Manure Spreader now and get the Straw Spreading Attachment when you need it. This attachment can be furnished for all John Deere Spreaders now in use.

### Write for Free Package MS-44.

and get full information about this wonderful Straw Spreading Attachment and also special four-color folder, describing the John Deere Spreader. Booklets tell you all about straw and manure, their fertilizing value, how and when to spread it. Write today.

## "Right-About Face" with FULL POWER!

Remarkable Performance  
with Small Tractor

BEFORE you write out your check for any tractor, note how the Bean TrackPULL turns right around into the same row with tools down deep all the way, without pivoting, or overloading one side of the tractor, or doing anything else that is injurious, or difficult, or that a tractor shouldn't do. Note how this tractor takes its turn with its full load, just as easily at it takes the same load down the straight-away. Note the reason for this in this tractor's single track with which it pulls and you steer. See how easy it is to steer, and how that great PATENTED SINGLE TRACK FEATURE also makes the TrackPULL Tractor as flexible as the best team you ever had.

## Bean TrackPULL Tractor

With Patented  
Front-Drive

"Almost Like  
Animal Intelligence"

"Mine acts like it understood—almost animal intelligence," is the way one man puts it—and you'll want that, too, in a tractor. For ease of handling, as well as the ability to make right-about-face turns with full power, has got to be in the tractor you use in an orchard or vineyard or in the field, where there's a lot more than just straight-away work to do.

Be careful about "acrobat" tractors—for tractors that will spin around at a fair aren't necessarily tractors that will turn short with a full load in the field. Make them demonstrate to you with their tools hitched on.

Send right now for the Bean TrackPULL catalog, learn the price of this great machine, and get the name of the nearest factory-agent who will demonstrate how the Bean TrackPULL Tractor does the kind of work that's waiting for it on your place. Mail us this coupon, now before you forget it. Find out the truth about tractors right now!

### Editorial Correspondence

**Q**UESTION: What do you mean by alternating current, and—what is electricity anyhow?" That and numberless other questions reminded me of the little old red school house days back in old Ohio when we used to snap our fingers

a corps of efficient tractor men from factory and salesroom of eight different makes of tractors; Bean, Best, Cleveland, Holt, International, Sampson, Waterloo Boy and Yuba, make up a most efficient educational force.

I am tempted to write; "It's the biggest ever," but will refrain. However, there are 210 registrations and every

each tractor supplied by the manufacturer. All the class gather in the lecture room of the citrus experiment station at eight o'clock each morning. The lesson starts with lecture, one and one-half or two hours, by Prof. Davidson. He is aided by charts, drawings, photos, magnetos, engine parts and, in fact, whole tractors, and occasionally by a good story. All units are in this one class. When Professor Davidson has finished the units are taken in hand by the factory instructor on the tractor. Various parts of the machine, its principles, manner of handling, are all explained. There is no "talking shop," no sales are being made or attempted, but the how of tractoring is given. It's an operator's course and has no more

of shop work or mechanics than is necessary to make an efficient farmer operator.

The university men all speak highly of the spirit shown by the representatives of the various tractors. They are teaching tractoring and not "my particular tractor."

Then comes luncheon. As the station is some two or three miles out from Riverside, the cold school lunch or "bite" suffices.

At one, sharp, class convenes for another lecture, then more practical work with tractor, or, as on this, Wednesday afternoon, Prof. L. J. Fletcher gives field talk and demonstration of the dynamometer and explains how the layman may determine as to horse-

Continued on Page 231

Coming Down the Line

The tractor with dynamometer is making its test of horsepower requirement. Class lined up on either side with stop watches and notebooks ready for computation.

and preface our questions with "Please may I speak?" For nearly every question asked at the tractor school at Riverside was prefaced with "Question—What, etc.," and be assured "Question" brought quick and satisfactory answer—unless possibly the occasional unanswerable.

It is a really truly school. Professor J. B. Davidson of the University Farm at Davis is master. L. J. Fletcher, R. B. Lundy, R. S. Vaile and

fellow—or lady, for there are eight—is on hand with pencil and notebook. There have been two other schools in this state, at the University Farm. The last, which was the largest, had an enrollment of 187 for two weeks. Arizona and Colorado are scheduling schools which may be large, but when they beat 210, they will have a large school.

The class is broken up into eight units; about 25 in each unit, one for

Explaining Use of Dynamometer

Tractioneering class in the field computing horse power required to pull two bottoms through experiment station soil. The plows are connected with the tractor by the dynamometer attachment, and Prof. L. B. Fletcher, instructor in agricultural engineering at Davis, is showing class how to make the computation.

## Cauliflower Profitable

**A** GENUINE surprise is in store for the dairyman, the orchardist, the small fruit grower, or anyone who has been farming along the older established lines, when he takes a look into some of California's specialized productions. California is a

wonderful state in opportunity for the farmer who believes in diversification. It seems to be even more wonderful in the possibilities which it offers to the specialist. We believe there are even more farmers engaged in specializing in California than in any other state in the Union. There is the mushroom

Compton, Los Angeles County, Growing Hundreds of Acres. Shipped to Eastern Centers Cooperatively

grower, the asparagus grower, the breeder of pure bred live stock, the grower of raisins, of prunes, of cherries, and so on through the entire range of food crops of the world.

One of the newer of these special crops is cauliflower. The photographs on this page give a better idea than

we can give otherwise, but here are a few notes to add to the interest:

The place is Compton, chosen because it is proving a producer of wonderfully fine cauliflower. The crop is handled cooperatively, almost entirely. In the association, the California

Continued on Page 250

One of 57 Varieties

This is evidence of the labor shortage. The Heinz Pickle Works' plant is immediately behind the camera as view is taken, and this great pile is surplus over what the works is handling. The men are removing outer leaves from the heart or edible portion. The casks are filled with two grades of cauliflower, only the very finest being used under the "57" brand.

Saved for Seed

Here is a head of cauliflower which is not going to market. As noted, the leaves are pushed back to give a view of the hard, compact, fine-grained cauliflower. It is not abnormally large, but its quality is the highest. Ideal cauliflower must not only be compact and white and hard, but the leaves must gather together over the top to prevent staining, or weathering, of the edible portion. In other words, it must be kept almost a pure white.

# Farm for Profit

## and Help U. S. Win the War

Authoritative tests have proved that as high as 50 per cent increase in crop production may be expected from proper use of fertilizer. Do you realize what that increase means? Fertilizer is the basis of crop production, and compared to the prices of the crops they help to produce, fertilizers were never so cheap as they are today.

### MORE CROPS

will be raised in America this year than ever before. Make every acre you own or rent, produce to the limit. Fertilize your land—the increase in yield and price of crops will more than pay all the fertilizer expense—it will enable you to farm with profit. Don't spend your time working worn out land. Make it pay—Fertilize with Hauser's Organic Fertilizer.

## Clovers for Cover Crop and Forage

A SUBSCRIBER at Modesto has written the Cultivator for information as to uses of the common white clover and "Indica." This was referred to Prof. Jno. W. Gilmore of the University of California, who answers:

"It is true that in California there are two kinds of so-called sweet clover, and there are several other kinds which are not abundantly grown in this state. These two kinds of sweet clover mentioned also are known under various other common names such as White Sweet Clover, Bokhara Clover, Siberian Melilot and Honey Clover. The yellow flowered kind is sometimes called bitter clover. The principal uses made of these two kinds of clover in California are: for the white flowered kind, green forage, hay and as a cover or green manure crop. The yellow flowered kind is used almost exclusively as a green manure or cover crop in the citrus sections of Southern California. The white flowered kind, to which most commonly the name of sweet clover is given, is a perennial and is adaptable to a very wide range of soils and climates. It is also quite drouth resistant but responds readily to applications of water, and under such circumstances gives an abundance of green forage or pasture. It can be cured for hay but the relative coarseness of the stems prevents the securing of hay of most excellent quality. When fed green or pastured the cattle do not eat it very readily at first but have to acquire a taste for it. After the taste for it has once been acquired it is highly relished and is nutritious. In feeding it green or in pasture one must be careful since it causes bloat-

ing when eaten in considerable quantities. After cattle have become used to it, however, the danger from bloat-ing is somewhat reduced.

"Since it does not produce so good pasture or hay as alfalfa it would seem desirable to grow sweet clover only on those lands upon which alfalfa may not be grown because of poor soil or lack of water. Under conditions, however, of light soils and lack of water, it may be grown with variable success and result in the enrichment of the soil as well as furnishing spring feed.

"The yellow flowered clover, sometimes called bitter clover and technically known as *Melilotus indica*, is an annual and in California is grown exclusively as a cover or green manure crop on those lands where organic matter is decidedly deficient. It grows well, however, along many roadsides and waste places throughout Central and Southern California. It has little or no value as a forage crop, mainly because of the small leaf, abundant stem and other characteristics of its growth. As a cover crop it should be planted early in the fall in order that it may germinate with the first rains, or oftentimes it is planted in the latter part of the summer and germinated by irrigation. When treated in this way it produces an abundant cover early in the spring which permits of early plowing and preparing orchard lands for the summer cultivation and irrigation.

"The seeds of both of these kinds may be secured in the market and that of the indica or bitter clover is relatively cheap in comparison to the amount of green material that it will produce."

## Watching the Pests

S TATE Horticultural Commissioner George H. Hecke is in Southern California looking after citrus matters. Especially is he giving attention to any possible infestation of the dreaded citrus canker. Of course it is known that it is now infesting Florida, nearly all of the Gulf states, especially Texas, and both California and Arizona are dreading its march to the West. As a step in the fight against this pest, Avery S. Hoyt spent several months studying its habits at first hand in Florida and the Gulf states. We have given in the Cultivator some of Mr. Hoyt's findings, with illustrations which were certainly convincing of the deadly nature of the disease.

Now this fight against citrus canker is being somewhat affected by war conditions, that is, through the taking of some of Mr. Hecke's most efficient helpers from the ranks of the producers into the trenches. Mr. Strong, who has been in the Southern California office at Los Angeles will

soon be in the engineering corps. Mr. Hoyt will volunteer for special work, C. P. Claussen, at the head of the branch of the insectary located at Alhambra, has also joined the fighting forces. While the work of the commission is far from being demoralized, it is seriously affected. However, Mr. Hecke is doing his best to keep the remainder of the force in working condition and is making such substitution as is necessary. It is to be hoped that Mr. Claussen, Mr. Hoyt and Mr. Strong will soon again be in the force of the state horticultural commission and aiding in the work of reconstruction.

The work of the state commission is being enlarged almost every day. The new squirrel legislation has given additional work to every commissioner in the state, and some very thorough work is being done in squirrel eradication. It is expected that at the next session of the state legislature more effective weed control legislation will give the commission better control of the weed pests which have wrought such havoc in many sections of our state.

## Refining of Inferior Olive Oils

By W. V. Cruess and C. C. Scalione

The most common defects of poor olive oil are: (a) Disagreeable or "rough" taste, (b) disagreeable odor, (c) dark color, and (d) high viscosity. Usually two or more of these defects are present in the same oil.

A study of Californian oils has been made during the past two years with the objects of determining why they

have not sold as well as imported oils and how the defects of many of the oils of this state might be remedied. The recommendations for treatment given in this article are based on both laboratory and factory experiments and have been well tested. The defects and methods of refining the oils to overcome these faults will be taken up in the order noted above.

**Flavor**

Many olive oils possess what is variously termed a strong "fruity" flavor, a strong "vegetable" flavor, or a "rough" flavor. The cause of this flavor lies in the quality of the fruit used. Such oil is not unfit for table use, but is merely considered a second grade product. It is, however, difficult to sell such oil in normal years.

More serious defects in flavor are those caused by improper methods of manufacture. The most common faults in manufacturing methods are: (a) Fermentation or molding of the olives in bins or sacks before crushing; (b) use of machinery that has not been thoroughly cleaned and which may contain rancid pulp and oil; (c) proximity of pomace piles or other material giving off disagreeable odors; (d) standing of oil too long in contact with the black liquor after pressing; (e) bacterial decomposition of the oil during storage; and, (f) rancidification of the oil because of too long or improper storage. These may all be avoided by the manufacturer in ways that will be self-evident to the experienced oil maker. To discuss this side of the situation adequately would mean a complete dissertation on the principles of oil manufacture. The present publication deals only with the treatment of oils which for the above reasons are of poor quality.

\* \* \*

The writers of the article refer to tests on the treatment of oil of poor flavor with bone black, wood charcoal, superheated steam and other methods and give much technical information as to correcting disagreeable odors, dark color, reducing viscosity, and end with the following summary:

**Summary**

(a) California oils possessing a "rough" or disagreeable flavor may be refined by treatment with bone black, soda ash and water at 180 degrees to 190 degrees Fahrenheit for two hours, followed by cooling, filtration with kieselguhr, and aging several months.

(b) Disagreeable odors may be removed by the same process together with the use of a stream of carbonic gas.

(c) Excessive color is a common defect of Californian oils. It is removed by treatment given under ("a"), or if excessive color is the only defect, by bone black and filtration alone.

(d) "Thickness" or high viscosity is caused by the presence of large amounts of stearin and palmitin. These may be removed by chilling the oil below 32 degrees Fahrenheit and filtration of the chilled oil. The equipment necessary seems too expensive under present conditions, but the process may prove practicable and profitable should the oil industry expand greatly.

**A FUNCTION OF SULPHUR IN FRUIT PRODUCTION**

By R. R. Snowden

An earlier conclusion of the writer's seems to be confirmed by actual experience.

In your issue of July 8, 1916 the writer said: "I have found that a decided deficiency of sulphur in the soil of an orange orchard is inimical to the quantity of fruit rather than the quality. Apparently the fruit tends to lose its power of clinging to its stem, and consequently dropping is more or less in evidence." The 30 acre Navel orange grove of H. E. Gilley near Porterville was treated after deficiency of sulphur was found by analysis of the soil with two tons gypsum per acre and nothing else. Now Mr. Gilley reports that he had

this season 65 per cent of a full crop, while the neighboring groves had but 15 per cent, the loss in each case being due to the prevailing "drop."

Mr. Meaker of Glendale makes the same kind of report on his grove, but he had no drop at all.

**Retarding or Hastening Blooming**

I have found that application of manure in conjunction with a dearth of moisture in the soil will cause an orange tree to bloom earlier; and I hold that the converse must be true. This is a reasonable conclusion, for moisture is conducive to tree growth, while on the other hand whatever is inimical to the prosperity of the tree will stimulate the function of reproduction.

In accordance with this conclusion the groves should be kept moist to retard blooming so as to escape the belated frost which we are so apt to have yet.

**SIZE OF FARM BUSINESS**

The number of acres is an important factor in the size of the farm business. Notwithstanding all that has been said and written on the advantages of the small farm it is generally true that a fair acreage in crops is one of the essentials in securing adequate size of business. This means the land on which crops are planted and harvested during the year. The large size of farm does not indicate that a man is doing a large business.

It is the land that is actually being used which has an influence in increasing the volume of business. The size of the crop area which is most profitable will vary with the type of farming done. And it must be remembered that the arguments in favor of large size of crop area do not conclude that all farms should be large or of one size. Men vary in their capacity to manage land. Also, some men prefer to operate a small farm at less profit, than a large farm at more profit.

Of course, everyone knows that the crop area of a farm might be increased to the point where it would be no longer profitable. It is apparent that the farms having large crop areas have a better opportunity to utilize labor profitably. Many of the same operations are required in preparing for planting, tilling and harvesting a small area as for a larger area. Also, the small area often requires more turns in working the field in proportion to the larger area. Then, the machinery requirements are usually higher per acre on the smaller area. All these items enter into a higher cost of producing crops. To a certain extent, therefore, the advantages are with a large crop area.

The Stanislaus Fig Growers' Association in its recent meeting at Ceres elected Walter Case president and J. W. Buck, secretary-treasurer.

**FUMIGATING OF NURSERY STOCK**

Fumigation of nursery stock as a means of pest control is becoming recognized in California as an economic proposition. It is one of the best known methods of destroying woolly aphids scale pests and other injurious insects. If handled properly it does not injure the stock or affect its growing qualities. We recommend that the nurserymen in California give serious consideration to this method of pest control. If nursery stock is treated at point of origin and a certificate of fumigation sent with each shipment, we believe that the satisfaction of customers, the reduction in condemnation at point of delivery and the assurance that the fumigation is done properly will more than pay for the cost. Fruit growers should be willing to pay extra for fumigated stock for it gives them a reasonable assurance that they will have no infestation of scale or woolly aphids.

**PRETTY TIGHT PLACE**

A stingy millionaire in New York was solicited to contribute toward raising a statue to Washington. The miser refused with the excuse:

"I keep Washington always in my heart."

"Well," replied the indignant applicant, "I don't believe the father of his country ever got into such a tight place as that!"—Pittsburgh Chronicle Telegraph.

**BEST IN THE LONG RUN**

*World Standards*  
*Wheat -*  
*Gold -*  
*&*  
**GOODRICH**  
**TESTED TIRES**

**A** wheat is the standard and measure of food, and gold of money, so Goodrich Tested Tires, are the standard and measure of tires the world round. Wherever you see that name and trademark on a tire, you can be sure you will get maximum service in that tire, backed up by the good faith of the maker.

In the purchase of any product, experience dictates you put your buying faith in a standard brand. It safeguards you from deceiving appearances. Nowhere are appearances more deceiving than in tires; and your best protection is Goodrich, the name which for a half century has stood for the best in rubber.

Whether you need an automobile tire, large or small, a tire for your truck, motorcycle or bicycle, trust the trustworthy brand of Goodrich. You are sure of the service because it is a service proved the nation over by Goodrich Test Car Fleets. The teeth of the roads of the nation have gnawed at Goodrich Tires and the tires, fighting back, conquered with phenomenal mileage.

Get Goodrich pneumatic tires for automobiles, motorcycles, or bicycles, and get the greatest tire strength and mileage for your money.

Get Goodrich Truck Tires and you get truck tires that in actual test have outworn steel. Trust in the Goodrich brand, and you will save time and money, and gain comfort by it.

## Land Settlement in California

Commission Selects Tract Near Chico, Butte County. Hundreds of Prosperous Farms Will be Built

**T**HE last session of the state legislature made appropriation of \$10,000 for the expenses of maintaining the land settlement commission and enabling it to make a trial of the Australian method of subdividing tracts of land into small holdings, not exceeding probably 100 acres and selling this land to bona fide farmers on long time payments at low rate of interest, thus building up the state and giving farmers a chance to farm on a basis which gives a living chance for success. With this appropriation was another and greater, for \$250,000, to be used in financing the movement.

Northern California has the honor of furnishing the first land, description of which is given to us by Dr. Elwood Mead of the commission. Dr. Mead writes:

"Our board has bought 6000 acres of land near Chico. It is a part of the Stanford University lands and the Lott Ranch, both tracts being parts of an old Spanish grant. Owing to the refusal of these two owners to sell or subdivide, these lands have been held intact while the country adjacent has been subdivided, closely settled, and is highly developed. Chico is only six miles away, reached by two highways, one being the state highway, so that the people on this tract will have the advantage of a state normal school and excellent high schools. We hope to secure the establishment on the tract of an agricultural school under the vocational training act. The Northern Electric railway crosses the land; the state highway and Southern Pacific adjoin it. One gravel road crosses it east and west; another one is to cross it north and south. A part of the land now leased rents for \$20 an acre. A part of it is in crop and a considerable part has been levelled and is ready for irrigation. The price paid was \$100 an acre. That includes land, water rights and improvements. It will be sold on conditions which will simply enable the state to receive back the money loaned to help this development, and that means that the people will get the land at far better figures than any private subdivider could give. The terms will be 20 years time on amortized payments, the interest being five per cent, payment on the principal three per cent, so that the settler who pays eight per cent per year will get his farm free of all encumbrances. The same interest will be given on money to help build barns and other improvements. If a settler wants a longer time he can obtain it by securing a loan from the federal land bank, but it is not believed that settlers will need a longer time on these lands.

"The applications on file insure a demand for much more land than the state can furnish in this settlement or with the appropriation made by the last legislature. It means that there will be not simply a few, but hundreds, of men equipped by character, experience and money to succeed and to build up fine communities in this state and increase our production immediately, but which we will have to turn away because the board has not the funds with which to meet the initial payments on land and give the help which the act provides for promptly equipping the farms.

"That is only half the story. There was offered the state a considerable number of tracts of land admirably suited to closer settlement. They ran all the way from Siskiyou County to Imperial County. The three tracts which the board finally considered, which the experts of the University declared suited to the purposes of the act, would all be successful communities if subdivided and sold under the act's conditions, and the board believes the kind of organized community development which this act provides for is the type of development which this country, and especially California, needs, and that it is unfortunate that it is not in a position to extend the area so that settlements could be car-

ried out on all three tracts, because there is every reason to believe that suitable settlers for the entire area of all three would be ready to utilize these opportunities."

With his letter Dr. Mead encloses the following circular which the board is sending agricultural engineers and others interested in rural organization and advancement:

One of the most important of the board's duties is the preparation of plans for farm houses and farm buildings and for the grouping of these buildings. We wish in doing this to mobilize the experience and knowledge of this country and hope that we will have the cooperation of all who are interested in making rural life more attractive, so that nothing which will contribute to the success of the state's plan will be overlooked. The cost of these houses will range from about \$800 to \$1000 for farm laborers' houses, up to \$3000 for farm houses. Within these limits of cost we wish to erect homes which will be convenient, sanitary and have something of beauty. Wood is the cheapest material in California, but it is not believed that the cost of concrete and masonry construction is prohibitive.

The farm buildings will include hay sheds to hold 100 tons of hay; dairy barns for 10 to 30 head of cows; houses and sheds for hogs up to 200 in number; and sheds and shelters for sheep up to 500. The climate of California is an open one, with no freezing weather but with considerable rain. Farm buildings will be erected to conform to these climatic advantages.

In pursuance of its plan, the land settlement board solicits contributions of photographs of farm houses and farm buildings, pamphlets giving plans and estimates of farm buildings and references to investigations or reports on this subject. The board hopes, with the interest and assistance of the public, to make these farm colonies of California an illustration of what can be done, by preliminary study and organization, to lessen the expense and increase the attractiveness and profit of rural life.

The California Associated Raisin Company guarantees present prices of raisins to August 1.

power required, or being used, to propel the three 12 inch bottoms.

Or perhaps Prof. Lundy demonstrates babbitt pouring, or pipe fitting, or soldering, or general overhauling of a tractor.

Then another "recess" (with the accent on the re) and all break for town. After dinner all gather in Poly auditorium and listen to address by Dean Hunt on "Agriculture in Canada," or by Prof. Vaile on "Irrigation," or other practical talk, till every attendant is ready for bed.

Two high school classes with teachers have transferred their week's work from Pomona and Ontario High Schools to this school. A Connecticut visitor in California is taking advantage of the opportunity, and two Kansas men delayed return home a

Prof. J. B. Davidson  
Prof. Davidson was in charge of the tractor school at the citrus experiment station. He is professor of agricultural engineering at the university farm school at Davis.

couple of weeks to attend this school, so with attendants from nearly all California the "graduates" of this institution will have wide influence on agriculture.

Request has been made for continuance another week, but that probably will not be. Within another year another will be held however, for the interest shown here is proof of its worth.

**AGAINST THE BORER**

In a communication from Sacramento we note: "Methods for inspecting all deciduous fruit nursery stock grown in Alameda, Santa Clara, San Benito, Monterey, Santa Cruz, San Mateo, Napa and other counties, where the peach tree borer, a native pest, is found, were outlined recently in a resolution adopted at a meeting here of county horticultural commissioners, nurserymen, fruit growers and state officials.

"The action grew out of a difference of opinion which developed between county commissioners and nurserymen as to the method of procedure, to guard against the spread of the pest. The resolution was presented at the meeting by a committee appointed by Geo. H. Hecke, state commissioner of horticulture.

"It provides that two inspections shall be made by county commissioners prior to shipment of nursery stock and that a final inspection shall be made by the county commissioner at the point of destination, at least two weeks after the shipment has been dispatched. It is further provided that all shipments shall be rejected in the final inspection where there are five or more larvae on the roots or where the stock is two per cent or more infected."

# L. A. Auto Tractor Attachment

**With Enclosed Gear and Perfected Cooling System**

The L. A. Tractor Attachment is an established success, having performed all kinds of farm work, and placed itself through sheer value as the cheapest tractor unit to buy, and operate, on the market.

It has proven its ability to do the work of three or four horses in any soil.

Repeated tests show that in plowing, harrowing and all farm work our tractor will accomplish three to four times the work of your horses.

At slight additional expense, depending on make of car, the L. A. Attachment can be fitted to other cars besides the Ford.

**ENCLOSED GEARS:** The greatest improvement in tractor attachments since their inception is the enclosing of the driving gears, an exclusive feature found in the L. A. Tractor Attachment only. The wheel is cast with a solid web in the

**Price \$275 f. o. b. Los Angeles**  
Including cooling system, new high efficiency tractor radiator, high duty fan, and automatic water circulator.

L. A. Auto Tractor Co.,  
Los Angeles, Cal.  
Gentlemen:—I am more than pleased with your Tractor Attachment and was certainly surprised at the power it developed when attached to a Ford.

It will easily pull anything that 4 to 6 horses will. I would advise the same tools that four horses are used on.

I know one man who has used your attachment through one season on a second-handed Ford and up to the present time has had no trouble, either with the Ford or the Attachment. At that rate I could afford to buy a second-hand Ford every year. It will not hurt the car any more than if it were used on the road.

For a cost of about \$50.00 I had an extra pair of Pinions made to fit a Mitchell car, and now I can use it on my Ford or the Mitchell as I choose.

I am very much enthused over the Attachment. Very truly,  
(Signed) PHILIP H. HAYES, Cupertino, California.

center, and the ring gear is made with a ledge against which the felt lined dust shield bears, retaining the oil and keeping out all sand and grit. Gears protected in this manner from dirt and well lubricated will last indefinitely. Open gears cannot last, no matter how good the material. This has been proven hundreds of times.

**THREE POINT SUSPENSION:** Our method of attaching to the Ford axle is on the true three point suspension principle which maintains the gears in perfect running alignment at all times, regardless of the irregularities of the surface of the ground or when crossing furrows at any angle. There is no strain on the car, as is the case when one part is attached to the Ford axle and the other part to the frame.

Do not confuse the L. A. Tractor Attachment with any other. There is a vast difference, in the principle and in the quality of the machine. The L. A. Auto Tractor Co. are the originators and patentees of this attachment.

# Olive TREES

**Well Rooted**  
Insure You a Uniform Orchard

Roeding's "true trees" are scientifically grown under ideal climatic and soil conditions. Whether you are going to plant an Olive, Citrus or Deciduous orchard, you rightly want the best trees.

**Write for 96 Page Book**  
Tells all about preparation of soil, planting, pruning, irrigation, best trees to grow for home or commercial purposes. It is the largest, most interesting and practical book on horticulture ever published for FREE distribution on the Pacific Coast.

**Varieties**  
The three most commonly planted varieties of olives are: Mission, Manzanillo and Ascolano. The Sevillano, or better known to the trade as "The Queen," is also a favorite with some.

**Demand**  
The demand for California Ripe Olives and California Olive Oil more than keeps pace with planting. A much larger acreage in this state should be planted at once if we are going to supply the trade.

**Fancher Creek Nurseries**  
211 Holland Building  
**Fresno, California.**

## Big-Scale Harvesting

ONE of our customers, who realized that his opportunity had come for cutting out a lot of the old delays, worries, and high costs of his yearly harvesting, invested in a **Deering Harvester-Thresher**. This letter of his describes the good average experience:

American Falls, Idaho, Aug. 23.  
"The Deering Harvester-Thresher, purchased from the International Harvester Company, has proved very satisfactory, having cut about 150 acres, averaging about 15 acres per day, with but one man, cleaning and saving the grain better than any thresher I have operated. The machine is very economical, being the cheapest way of harvesting I know; the same is true of the cost of help. The saving in my thresher bill for this year will more than pay for the cost of the machine; in addition, a great saving of work in the house has been made, and in the feeding and help that is required for the old-time way of harvesting.

Yours truly,  
Martin Garn."

Do your harvesting and threshing in one operation, turning the old unnecessary threshing expense into clear profit, saving time, doing away with the risks of long-drawn-out harvest. Own a **Deering Harvester-Thresher** for this year's harvest. Let your threshing-bill saving pay for it. Write for folders.

## The Evolution of Irrigation

Just as the Open Irrigation Ditch was superseded first by wooden, and then by concrete flumes, so were the latter in turn forced to give way to the "K-T SYSTEM" of underground conduits, equipped with gates and valves. This provides for a perfect distribution of the water at the exact spot required, and at just the time it is needed. It also eliminates the constant losses resulting from evaporation, seepage, and ditch choked with weeds—wasting land, water, time and money.

Write today for our Special Booklet,  
which gives complete detailed information.

## Questions and Answers

ANSWERS BY EDITOR AND STAFF

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

### Treating Cloth with Oil

Please tell me how to prepare a solution to use on muslin for cold frames to make them rain proof and prevent mildew and rot. Should it be applied with a brush or should the cloth be dipped in the solution?—Subscriber.

There is no satisfactory treatment for cloth. That is, if oil is used it is hardened and is liable to "burn," though it does effectually prevent mildew. Treating with creosote, which is an effective remedy for mildew, is rather expensive. Where the cloth is over a frame and not in danger of breaking from handling, raw, hot linseed oil is used. We have seen canvas stretched and treated with hot oil which makes an excellent roof, even shedding rain, and will last several years. Have the oil only hot enough so it will penetrate. If boiling or especially hot it will scorch and destroy the cloth.

### Home Made Peanut Butter

Please tell us how to make peanut butter at home in a small way.—Subscriber, Garden Grove.

The ordinary home food chopper is very satisfactory, running peanuts through first with a coarse knife then with the fine meal or paste knife.

### Paste for Labels

What is the best paste when used for pasting labels on honey cans?—Subscriber, Hemet.

As a rule ordinary flour paste is used. However here is a formula in "Successful Canning and Preserving" as given by Powell and published by the Lippincott Company, Philadelphia: One cup flour, one teaspoon powdered alum, one cup cold water, one-half teaspoon oil of cloves, three cups boiling water. Mix flour and one cup cold water thoroughly. Add boiling water and bring slowly to boiling-point, beating all the while to prevent lumps. Boil for five minutes. When cooked, add the alum and oil of cloves, pour into glasses with covers.

### Coating for Orchard Heaters

What is the best coating for orchard heaters or fire pots when stored away for the summer?—Subscriber.

This question was referred to James D. Culbertson, assistant manager of the Limoneira, Santa Paula, and he answers:

"To protect the bottoms of our oil pots we have adopted the policy of dipping them in hot asphaltum after thoroughly cleaning off all old paint or asphaltum and dirt. Rust spots are carefully scraped and inspected before dipping. This gives a thick, heavy coating, impervious to moisture, if well applied. The pots are dipped in this hot asphaltum to a depth of about three or four inches. Above the asphaltum dip we paint them with orchard heater enamel which we have been purchasing through the Supply Company. It is more expensive than an asphaltum paint such as we might make with distillate and asphaltum, but very much more durable in the sun and rain. It is also more nearly fireproof, though we have found no paint that will withstand the heat where the pot approaches a red heat. This enamel may be applied either hot as a dip, or with a brush. A slight

warming improves its spreading qualities when being applied in the latter way. Before dipping pots into the hot asphaltum we first scrape from the bottom the previous year's coating, only removing the roughest of it in this way. Then we place the pot for a minute or two over a burning pot to burn off the remainder of the paint, and heat it well for the dipping. A hot pot dips much better than a cold one."

### Concrete Fence Posts

Are concrete fence posts a success? Are there any bulletins published on the subject?—Subscriber.

Concrete fence posts have proven completely successful, the only objection being the cost, but length of life of the concrete posts considered, the cost is perhaps lower than for wooden posts. There have been bulletins published on this subject. Write U. S. D. A., Washington, D. C., for Farmers Bulletins 403 and 481. Also write to Portland Cement Company, 111 West Washington Street, Chicago, for bulletin on Concrete Fence Posts.

### Feed for Balancing Hog Diet

What food when mixed with corn would give the best growing results for small hogs?—Subscriber, Julian.

Alfalfa will be the best. Also to balance your corn you could use skim-milk, tankage, restaurant and hotel wastes. See articles by J. M. Bomberger of Green Gold Ranch, in the issues of May 11 and June 15, 1917, of the California Cultivator.

### Milk Substitute for Calf

What good mixed meals could be used as a substitute for milk to feed very young calves?—Subscriber, Escondido.

There are many excellent calf meals on the market which many of our subscribers have found satisfactory. "Feeds and Feeding" by Henry and Morrison gives the following as substitutes for milk: "Several different concentrate mixtures have been used with more or less success as substitutes for milk in calf feeding. While carbonaceous grains are better supplements to skim-milk than are concentrates rich in protein, substitutes for milk must supply an abundance of protein, as does milk itself. At the Pennsylvania Station Hayward fed calves whole milk for seven to ten days and then gradually substituted a home-mixed calf meal consisting of 30 parts wheat flour, 25 parts coconut meal, 20 parts skim-milk powder, ten parts linseed meal, and two parts dried blood, the mixture costing about three cents per pound. One pound of the mixed meal was added to six pounds of hot water, and after stirring for a few minutes, cooled to blood heat before feeding. With careful feeding the calves receiving the calf meal made as good growth as others fed skim-milk. Hayward points out that calves raised upon a milk substitute should have warm, dry quarters as they are apt to be less resistant to disease than milk-fed calves."

### Rabbits not Breeding

What is the matter with does that will not breed? The fault is not with the male, for I have bought a new one of entirely different stock, still no results. Does in good condition, not too fat, plenty of green feed, dry alfalfa, bean straw, and beet tops. No grain

for nearly a year. Oldest three years old.—Subscriber, Anaheim.

Does overfed will often fail to produce young. If your rabbits are not too fat and your bucks not barren specimens, then try the following system: Forced matings are rarely successful. If does continue to refuse the buck, leave them (one at a time with him) over night in a hutch that has previously been occupied by a buck and feed soaked peas. This will help to produce the desired results. Never permit the buck to be placed in the hutch of the doe, but put the doe in the buck's hutch, and never permit the buck to pull or bite the doe. About five days after the mating try them again, and if the doe refuses, it is a pretty sure sign that she will kindle. In some cases the doe will accept the buck up to within a few days of the time she is due to kindle. In breeding it is most important to have your stock in the best of condition as regards their fur, and if a little thin instead of too fleshy, so much the better. If your doe repeatedly fails to breed, repeat above performance a couple of times, and if she still fails, dispose of her. It may be possible you are overworking the service of your bucks, as three does a week are sufficient for the service of a buck during the breeding season.—R. V. M.

Pump Connection

Please inform me as to pumping plant with direct connection, that is without belt, having engine and pump down in pit, as I think the direct connection will eliminate the slipping of belt. What I would like to know is does the atmospheric condition have any effect on the engine? That is, will there be air circulation enough for engine with buildings over it? And where can such an outfit be bought?—Subscriber, Kingsburg.

Pumping plants with an electric motor connected directly to the pump are sometimes used but we do not know of any such plants run by gasoline or distillate. There can be no objection to connecting a gasoline engine directly to the pump except the difficulty of installation and the fact that the speed of the engine and pump cannot be changed to suit the variation of the water level. This also applies to direct connected electric motors. If proper sized pulleys are used there need not be more than 2½ per cent loss of power from engine to pump, and if the proper width of belt is used, and properly installed, the loss from slipping will be negligible.—J. B. N.

Depraved Appetite

Cows that are fed on home grown alfalfa, pumpkins, uncured beet pulp, and bran do not seem to be satisfied. They chew the roof shingles, fences, and other pieces of wood. They also have salt and sometimes green barley. What remedy could be applied for this condition?—Subscriber, Anaheim.

This is a desire which may result in starvation unless treated. The cattle will often eat old rags or even droppings from other cattle, soil or other strange and unappetizing material. The following treatment is recommended in the book called Diseases of Cattle issued by the department of agriculture:

"The aim in such cases must be to improve the process of digestion and to supply the animal with a sufficiency of sound and wholesome feed. The following should be given to the cow three times a day, a heaping tablespoon constituting a dose: Carbonate of iron, four ounces; finely ground bone or 'bone flour,' one pound; powdered gentian, four ounces; common salt, eight ounces; powdered

fenugreek, four ounces; mix. In addition to this, three tablespoons of powdered charcoal may be mixed with the feed three times a day, and a piece of rock salt should be placed where the animal can lick it at will."

We may add, by the way, that every owner of a cow should write to the congressman of his district, Washington, D. C., and ask for a copy of this book. We believe the Division of Publications will mail it on the payment of 75 cents or \$1.00, but no doubt the congressman will be glad to send it from his allowance.

Another book, "Productive Feeding of Farm Animals," by F. W. Woll also gives much the same mixture and sug-

gests plenty of sunlight, fresh air, sanitary stalls or boxes, scald pails daily and never let feed ferment.

Grafting Cherry

I have a Spanish cherry tree which does not bear. Can I graft another into it that will bear? How do you graft? Must the tree be cut back?—Subscriber, Puente.

Cut the top off and graft in the branches the same as you do other trees, only put in all the grafts you can so as to take the sap rapidly. Cut the branches off high enough to get into the small limbs. Saw across the corners of the stumps and trim out with a knife or chisel and cut the

scion to fit. Incline the tops of the grafts out slightly, thus making sure that the inner barks of the scion and stalk match. Rewax if signs of cracking appear.—J. W. M.

Eggs in Water Glass

Last summer I put up a lot of eggs in water glass in jars according to directions in California Cultivator. In some the water glass made a thick white jelly and the eggs are keeping well; in others the whole jar remained transparent and in these the eggs are not so fresh and some even run together when broken into a cup. I mixed the solution all at one time. Is the solution too weak or was it not mixed well? The directions on the can say

Continued on Page 250

He's Learned Something

Only a few years ago this orchard was planted. And now it's only fit for kindling wood. It's coming out, roots and all. It's coming out in a hurry too, not only because it isn't worth the space it occupies but also because the man who owns it has learned something. (Something that perhaps you already know.) He has learned the value of dynamite on the farm. He is saving time, labor, and money by blasting out the old trees with

HERCULES DYNAMITE

And when he plants his new orchard he's going to plant it right—in holes blasted with dynamite, not dug with a spade. Here too he saves time, labor, and money. But, more important, he plants the trees as they should be planted. He gives the roots a chance to grow through receptive soil. They don't have to fight for every inch they make. That's waste of energy that ought to go into fruit.

The new orchard will bear a year earlier

than any of his others have. It will give finer fruit and more fruit. It will be a real money-maker.

"And how did this man come to use dynamite?" you ask. He answered an advertisement just like this one. He got a free book, "Progressive Cultivation." He read it. That's the story. Your copy of the book is waiting for you. Fill out and mail the coupon below. You'll get "Progressive Cultivation" by return mail.

We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscribers must have mentioned the Cultivator when writing the advertiser.

**THIS WEEK'S COVER**

With more than 200 registrations the management of the tractor school feels that the time and effort expended was justified in the case of the school just closed at the citrus experiment station. From early Monday until late Saturday pencils and notebooks were kept busy by one of the most inquiring bunch of pupils we have ever seen. The picture shown on the cover gives one a faint idea of the attendants at the school, for their interest was manifested in their faces and in their intense application to the problems before them. There were men and women from nearly all sections of the state, and a more patriotic bunch is seldom brought together, for every moment was used to prepare for more and better California production.

**INCOME TAX**

The time for filing income tax returns has been extended until April 1. Nevertheless, everyone who can get within reach of the internal revenue collector's office should make immediate returns if possible.

**SUGAR BEET HEARINGS**

The hearings in Los Angeles are ended. The evidence covers thousands of pages and report will be made to Washington. Meantime it is hoped that the rains and the probability of a fair price being secured will induce general planting.

**FARM BUREAUS**

Two important farm bureau meetings were held during the past week in the southern end of the state, one at Holtville and one at Los Angeles. Both will be referred to more particularly next week. This

latter was the first in the county and was largely attended. Dean Hunt gave his address on "Canada at War," from which quotations will be made.

**STRENGTH TO HIS ARM**

California's live wire, Senator Johnson, has delivered some hot shot in the senate regarding using the people's money to pay eight per cent interest on the watered stock of great railway corporations. The farmers feel that the cost of living has been held down at their expense, with no guarantee as to their investment, and now in addition to take their earnings to pay long profits to railways is the last straw. They are hoping for more enlightenment in this situation from our senator.

**IT RAINED**

It did not rain as much as we would wish—and human nature perhaps has not the capacity for being satisfied with the blessings given us—but from Shasta to San Diego a twelve months drouth, the longest in the history of the state, has been broken by liberal rains. As this is written, on Tuesday, the rain has only amounted to about one inch in some sections; in others reaching to one and a half inches or even more, but there is still promise and sufficient length of season for abundance of rain and for abundant crops.

**SPECIAL CROPS**

It takes a specialist to grow a special crop, but results sometimes justify the specializing. On the third page of this issue is a story of how one section is making a name and no little wealth for it is now growing one of California's most successful special crops, cauliflower. The cauliflower industry has been developed within a very few years, and the particular section described has only been a commercial producer for about four years. But once it was found that the Compton district was adapted to cauliflower culture some of the brightest farmers of the section started investigating varieties, methods of culture and methods of marketing. Real success, however, was not secured until cooperative marketing was taken up. Now hundreds of carloads of some of the finest cauliflower ever shipped is being sent out and with profit to the grower.

**ANNUAL ASSEMBLY**

The farmers club, the farm bureau, the Grange, and every other organization which brings producers together to discuss farm and marketing methods is accomplishing great good for the producing interests. It has been our pleasure to attend the last two annual assemblies of the Imperial County farm bureau, and we have attended no similar meeting or convention in California which has made more of the opportunity. The one held this year at Holtville called from the state university at Berkeley, from the quarantine office of the state horticultural commission at San Francisco, from the state marketing bureau at Sacramento, from the department of agriculture at Washington, and from other organizations interested in agriculture, well qualified speakers, everyone bringing inspiration in the information given directly and in the showing made that the state and nation is aiding agricultural advancement.

The Holtville meeting will be given

more particular attention in next week's issue with some photographs taken for the Cultivator. For the present it is sufficient to say that it was a great meeting and we believe could have been greater had the sessions been extended over two days instead of being crowded into one with simultaneous sessions in different parts of the town.

**A BETTER MARKET**

The farmer often feels that in the present marketing situation he is between the deep blue sea and—another deep blue sea in his effort to make both ends meet. This situation was faced at the recent meeting of the National Milk Producers' Association, one of the newer organizations of the country, of which the California Dairy-men's Association is a member through its representative, Mr. Ayers.

In the resolutions adopted at this meeting is the following paragraph:

"We voice the opinion that the time is come when in order to quiet the feeling of unrest among producers the federal government should insist that farmers of every class receive their costs of producing plus a reasonable profit or the ultimate production will be reduced to the danger point."

Of course patriotism is appealed to and is sufficient to induce many to do their utmost, but there are limitations even to human effort.

**GO TO SCHOOL**

As we look out upon the problems growing greater every day it seems that the circumference of the world is increasing. Fortunately there never was a time when the opportunities were so many for securing information or ability to solve these problems as today. The nation, the state, and local organizations vie with each other in planning for all of us opportunities for growing. Perhaps many of us recall looking forward to the time when the duties of the school-room would be passed and we would be free from such irksome labors, but as we have heard many a farmer remark within the past few months, we never get free from the necessity of learning new lessons. Our own university has for some years conducted a correspondence school so that the busy farmer has been able to continue with his studies. The department at Washington and the food administration have given a great fund of information which is helping on some of the problems now before us, and the farm bureaus with their farm adviser leaders are likewise helping to meet the increasing difficulties, for as feed for livestock goes up and as the cost of labor and of all farm implements becomes almost prohibitive the full use of our abilities is surely demanded.

**TO LESSEN TENANCY**

One of the newer agricultural organizations of the country is the American Association for Agricultural Legislation of which a Californian, Dr. Elwood Mead, is president. Wishing to know more of the purpose of this organization we wrote to Dr. Mead, and he tells us that the aim was to "form an association to promote legislation which would give broader opportunities for men to own the land they cultivate and to lessen the growing evil of tenant farming. Subsequently it was expanded to include all agricultural legislation because of the belief that our agricultural community life needs to be reorganized, that the marketing of products is only less important than the conditions under which they are grown, and that by leaving this entirely to agencies which have no direct relation to either the consumer or producer there has been built up in this country a situation especially favorable to speculative manipulation, and it is a cumbersome and costly method of distribution. These are the main ideas of this association."

**This Week's War News**

The Italians have been aggressive and at various points have driven back the Teutons.

There have been three air attacks on London during the past week with only nominal damage.

The campaign against the I. W. W. and German spies is being prosecuted with greater vigor in this country.

Bolo Pasha, the French traitor, has been convicted and sentenced to death and Senator Humbert, charged with being connected with him, has been arrested and placed on trial.

The ship builders strike has been declared off, but not before President Wilson took a hand and suggested that to continue the strike at this time was nothing more nor less than treason.

There have been no important sinkings during the past week, and the submarine campaign is still being shown ineffective. Slight damage was caused to Dover by submarine shelling. Less than a dozen casualties were reported.

The Ukrainian forces have been driven from Kiev by the armies of the Reds, and the strange situation of the Rumanians, Ukrainians and the Austrians fighting against the Bolsheviks prevailed for a time. It appears that Rumania is under entire control of the Central Powers, and humiliating peace may be made.

The Turks are announcing that since the Russian armies have been withdrawn from the Armenian country the Armenians are brutally slaughtering the Ottomans. This is taken as the first announcement of slaughter of Armenians which the Turks propose to carry through. The former massacres were preceded by similar announcements.

The condition in the Central Powers appears to be practically the same as last week, though so far as known the strikes and rioting have been largely brought under control by the army. Whether they are to make their long advertised attack on their West front or, as anticipated by some, attack the allies at Saloniki and in northern Italy, is as yet a matter of guesswork.

It is now rumored that the Kaiser is demanding an immense indemnity paid in wheat by the Russians, and that peace with the Kaiser is the order of the Bolsheviks. Presumably the Kaiser will still insist on a controlling hand in Poland and other border states to be erected. Meantime the internal conditions of Russia are approaching civil war, and thousands have been slain.

The French and Belgian front has shown no particular activity during the week. So far as reported the American boys have acquitted themselves with honor, and have shot down one German airplane during the week. Artillery action has been almost incessant, and an aggressive movement is anticipated as soon as winter breaks. A number of German prisoners were captured in a raid made by French soldiers aided by American artillery in the Champagne district.

**CHISEL TEETH**

America had better look out after this war. I shall stand no nonsense from America after the war. — The German Emperor to Ambassador Gerard.

And ye have heard men say, Blessed are the peacemakers, but I say unto you, Blessed are the war-makers, for they shall be called, if not the children of Jahve, the children of Odin, who is greater than Jahve.—Neitzsche.

There is really only one nation that the United States should be afraid of in this war, and that is procrastin nation. — St. Louis Star.

# Agricultural News Notes of the Pacific Coast

## Northern California

Eldorado County received a two inch rainfall last week.

Petaluma is still shipping carlots of eggs to New York City.

Sutter County is ready for the appointment of a farm adviser.

Berkshire congress and sale, University Farm, Davis, February 21, 22.

The second annual auto show is scheduled for San Francisco this week.

Butte County peach growers are giving heavy irrigations to their orchards.

More than 500 cars of rice have been shipped from the Sacramento Valley.

April 17-19 are dates of the great tractor demonstration at Davis, Yolo County.

The government has confirmed titles to holders of land sold by the state on Eel River.

Supervisors of Butte County have appropriated the \$2000 necessary expense for a farm adviser.

Because of the mild winter lumber camps of Humboldt County have been operating to almost full capacity.

Butte County is to have a farm adviser, the board of supervisors having appropriated the necessary expense money.

Sacramento County viticulturists shipped over 48,000 tons of grapes last year; the net receipts were \$1,847,847.

The annual University Farm picnic will be held at Davis, Saturday, April 20. It will be preceded by a three day's tractor demonstration.

The Sutter County farm bureau is assured as a sufficient percentage of the farmers have been signed up and paid their dollar membership.

A. E. Miller of Mosquito, Eldorado County, is reported to have erected last year the first silo in that county. There are several now and more are being planned.

An alfalfa meal mill is to be established at Woodland, Yolo County, and a small portable plant is to be secured which will work in various portions of the county.

The Ferndale dairying section of Humboldt County has produced 23 per cent more milk during the month of December, 1917 than during the corresponding month in 1916.

The food administration grain corporation is notifying holders of grain that where unsatisfactory prices are secured the corporation will undertake to sell and secure full value.

Strawberry growers of Castella, Shasta County, have developed an extensive business in selling strawberry plants to growers at Watsonville. Last season they totaled \$10,000 for these vines.

At the last meeting of the Humboldt Dairymen's Association held at Ferndale, the growers decided on account of scarcity of carrot and beet seed that they would in the future raise their own.

The California Wool Growers' Association is backing the plan to establish an advanced registry for sheep in California. Those desiring to take advantage of this registry should notify Prof. R. T. Miller at the University Farm, Davis. Prof. Miller is the secretary of the California Wool Growers' Association.

## Central California

Fresno will observe Raisin Day as usual.

Large fig plantings are being made in Fresno County.

Seed potato buyers are finding demand lower than anticipated.

Farm Adviser J. F. Grass of Merced County is planning a campaign for increased production of hogs.

A bunch of 25 head of cattle were poisoned, it is thought with strychnine, on a ranch in Auberry Valley, Fresno County.

At a recent meeting of cattlemen at Fresno it was reported that plenty of alfalfa was available in San Francisco at \$28.50 per ton.

Oakdale, Stanislaus County, is planning early use of irrigation water and reports the flow at the head gates less than any preceding year.

Fort Romie, Monterey County, grange has just installed officers for 1918. The master is W. H. Boswell; the secretary, Mrs. Jennie Dudgeon.

Modesto ranchers are still holding meetings asking for consideration of irrigation district taxes which they think should be exempt from income tax.

Investigation as to dairy conditions near San Jose has brought out the fact that sanitary conditions in practically all Santa Clara Valley dairies are excellent.

It now appears that the castor bean demand is not so insistent as was anticipated, and producers who had contemplated extensive plantings are thinking the second time.

The California Grape Protective Association recently met at San Francisco. President Swett presided and made appeal for the preservation of the wine industry of the state.

The newly formed California Egyptian Cotton Growers' Association estimates that more than 10,000 acres will be planted in the San Joaquin Valley to Egyptian long staple cotton.

California alfalfa buyers have been notified that quarantine against alfalfa from Colorado has been extended to include Delta County in that state. The quarantine now covers all of Utah, eight counties in Idaho, four counties in Wyoming.

High schools of Monterey and Santa Cruz Counties are planning for working through farm bureaus arrangements for work on farms at vacation time. To the end that best information as to labor may be had a regular campaign of enlistment is planned.

The regular meeting of the Stanislaus County Duroc-Jersey Swine Breeders' Association at Modesto resulted in a resolution protesting against method of fixing prices according to "pork-corn ratio." J. M. De Vilbiss is president of the association.

Kings County's fresh peaches brought her \$180,000 while her dried peaches brought \$740,000—nearly a million to the good from the peach crop, besides nearly a half million from apricots. The same county's raisins netted her over a million and a quarter.

President Roeding of the Kings River conservation district called a meeting of Fresno district land owners at Fresno last Thursday to consider the Pine Fat project. The dry weather has emphasized the necessity of conserving the water of the Kings River.

## Southern California

Fumigation in practically all citrus orchards has ceased for the season.

There is much interest in Pomona in proposals to erect a dehydrating plant.

The supervisors of Riverside County have awarded contract for building of roads in the Coachella Valley.

Imperial Valley recently made one shipment of 49 cars of live stock in special train to Los Angeles market.

The farm center at Corona, Riverside County, has succeeded in securing the improvement of a bad piece of roadway.

A temporary embargo was placed on citrus fruits because of Eastern congestion. All trains are now moving regularly.

Licensed food dealers of Southern California met Commissioner Merritt in Los Angeles last week to discuss the new food regulations.

Fruit growers around Lankershim, Los Angeles County, are hoping to have cooperative cannery in operation for next season's pack.

County Horticultural Commissioner Waite of Imperial County announces that ladybirds are now ready for distribution in the barley fields.

The Riverside County farm bureau organized a farmers patriotic rally which was held at the boys' polytechnic high school at Riverside last Tuesday.

Owing to injuries received in the Ojai Valley fire last summer another death is now recorded, which makes the twelfth death as result of that great conflagration.

Blythe, Riverside County, has endorsed a project calling for the issuance of \$1,250,000 bonds for forming a protection and drainage district along the Colorado River.

Robert Reese, cow tester for Imperial County Association, has made report as to January tests, with long list of cows producing 45 or more pounds of butterfat.

Farm Adviser Essig of Ventura County is making a live stock survey. He asks all cattle owners to notify his office at Ventura of amount of feed needed and kind wanted.

J. A. Prizer, for years in charge of citrus orchard properties in San Diego County, has taken work with the citrus experiment station, taking work formerly conducted by W. M. Mertz.

The commission appointed by Food Commissioner Hoover to investigate the sugar beet situation has finished its hearings in Los Angeles and will now go to sugar beet section of Central California.

The commission appointed by Mr. Hoover to investigate as to cost of producing sugar beets in Southern California is now holding its hearings in Los Angeles. It will later go to other beet producing sections.

The Fruit Growers' Exchange of Southern California are issuing warning to ranchers not to delay irrigation of groves in hope of rain. It is necessary to put on the water at once to get a satisfactory setting of oranges.

The action brought in the United States district court involving validity of the lye peeling process patent will be brought to trial May 1. All cooperative canneries in California and many independents are uniting in this action.

## The Coast and General

Chicago is now offering Japanese eggs on the market.

Yakima, Washington, will hold a dairy products show February 28 to March 2.

Nearly a half million people used Pike national forest in Colorado for recreation every year.

One-third of the apple crop of Hood River, Oregon, is still in cold storage plants and warehouses.

A new sugar factory is being built at Rigby, Idaho. It is offering \$9.00 per ton for sugar beets.

A census of lumber produced in this country during 1917 is to be made by the national forest service.

A three days meeting of live stock producers of the Northwest closes today at Spokane, Washington.

Fuel Administrator Schwabacher is appealing to railway firemen and to all others to conserve to the utmost all fuel.

Farmers at Pilot Rock, Oregon, are planning erecting of a \$12,000 grain elevator. It will be cooperatively owned.

A half million acres of federal land have been thrown open for pasturage of New Mexico live stock. The stock will be admitted on March 11.

Every enlisted man in the army will be given an identification number. Numbers will begin at one and run consecutively without prefix or affix.

Farmers under the Roosevelt Dam, Arizona, can now secure funds through the federal land bank. John Orme of Phoenix has been appointed appraiser.

Utah farmers have agreed with the sugar manufacturers on a price of \$9.00 per ton with a fifty-fifty split for any advance on the price of sugar over \$7.45 per cwt.

The annual "round-up" of farmers and their families at Lehigh, Utah, brought out an attendance of over 500. Greater production and more perfect conservation were discussed.

The Farmers' Union of the three counties of Nez Perce, Lewis and Clearwater, Idaho, has elected C. W. Booth of Nez Perce, president, and R. L. Anderson, also of Nez Perce, secretary-treasurer.

There was a very enthusiastic meeting of the Agricultural Federation of Idaho, at Lewiston. O. M. Tronaas of Bliss, Idaho, was elected president. There was much discussion as to the labor question.

The cotton growers of the Salt River Valley are contemplating an organization which will aid, not only in marketing but growing, to better advantage. The labor question will be most serious next season.

California grew in 1917, 9000 acres of onions and was surpassed by only one state in the Union, New York which grew 9800 acres. In bushels California surpassed, as her lesser acreage produced nearly 1,000,000 more bushels than did New York. California's total was 3,546,000 bushels.

Storage supply of meats has been greatly decreased during the past few weeks by enormous demand on the part of our allies, and in addition demand for salt water fish has been greatly increased, and shipments are being made to greater distances from sea ports than ever before.

## Tractor Demonstration

Notice was given in last week's Cultivator of the holding of a big tractor demonstration at the University Farm at Davis on the three days preceding the annual farm picnic, April 17, 18 and 19.

There will also be a large showing of tractor tools in order to demonstrate the broad scope of modern power farming and to demonstrate the extreme versatility of the present-day tractor. There will be plows, disk and drag harrows, special types of cultivators, land levelers, sub-soilers, scrapers, checkers, and so on. The showing of tractors will include practically every machine sold on the Pa-

the numerous uses of the tractor as a stationary power plant. A big tent will accordingly be provided, around the edges of which will be grouped saws, feed mills, seed cleaners, and other similar equipment for the small tractors and big threshers, pumps, etc., for the large tractors. Inside the tent will be still other accessories of the modern power-equipped farm which, while not directly related to tractors, will serve to show the extent to which man and horse labor may be dispensed with in present-day agricultural operations. Among these exhibits will be motor trucks, electric-light plants, power-driven dairy and

Tractor Efficiency

Double disk harrow is an efficient orchard implement at this period.

cific Coast, the following tractors already being entered: "Caterpillar" Tractor, Yuba Ball Tread, Best Track-layer, Waterloo Boy, Cleveland Tractor, Samson Sieve Grip, several models of International Harvester Company, Avery and Case Tractors, Monarch Tractor, Bean Tractor, Moline Tractor, Wallis Cub, Fageol Tractor, Sandusky Tractor. Implement lines will be shown by the John Deere Plow Company, Oliver Plow Company, Pacific Implement Company, Baker and Hamilton, as well as I. H. C., Moline Plow, Case, Avery, Holt and Yuba that build plows and other tractor tools as well as tractors.

But the scope of the demonstration will be still broader than this, for an effort will be made to show some of

household equipment, etc. The oil companies will also have extensive exhibits.

The demonstration committee having the show in charge is composed of W. H. Gardner of the Yuba Company, chairman; G. M. Walker of The Holt Manufacturing Company; W. E. Price of the Pacific Implement Company; W. D. Boswell, tractor distributor; and Professor J. B. Davidson of the University of California. Mr. Eugene Smith will manage the demonstration.

The tractor is occupying the center of the field of economical agricultural production. We want to know all there is to know of its possibilities. More of this demonstration will be given in later issues.

## A New Farm Loan Ruling

The federal farm loan board at Washington writes that the financing of small farms has presented a rather puzzling problem as some farms yield much larger returns than others per acre. Also there are tracts of land which are too small to produce a living for a family. Where a small tract is intensively and skillfully cultivated and maintained in the highest possible state of fertility it often yields surprising returns. These returns, however, depend largely upon the man and not upon the land. A piece of land which may produce a gross return of \$1000 per acre under one man's management might fall off under the control of another to only a few dollars an acre. A tract intensively cultivated by a man who thoroughly understands intensive cultivation might produce an annual income which would pay interest on a valuation of several hundred dollars per acre, but it is, of course, unsafe to make that man a loan on any such basis unless the land itself, under average conditions, has a very high value. Suppose that the surrounding land is worth an average of only \$50 an acre. Take the spe-

cially skillful man away from the very productive tract and it will soon fall in value to about the average of the neighborhood.

And yet the farm loan board feels that the intensive farmer should be financed wherever possible. He must be financed, however, on a basis which will render the loan safe even if he should die the day after the loan is made and the land pass into hands in which it will give only average farm land returns. It is for meeting this situation that the board has made and promulgated the following ruling for the guidance of the 12 land banks:

"As a basis of determining what area constitutes a farm for loaning purposes the board requires the following test:

"First, Generally: The farm must be of sufficient area to yield at the hands of an ordinarily capable farmer, putting it to the use to which it is generally adapted and using average methods, an income sufficient to maintain the family of the applicant and discharge the interest and amortization payments.

"Second, Specially: Where through

intensive farming or the practice of  
a specialty a sufficient income has  
been regularly derived from a tract  
deficient in area for ordinary farm-  
ing, or where the application of the  
prospective borrower shows that he is  
by experience capable of producing  
such an income from such a tract,  
such area may be accepted as suffi-  
cient, provided the land has a stable  
and permanent market value sufficient  
to warrant the loan applied for. This  
ruling does not apply to fruit and  
orchard lands which have already been  
the subjects of definite rulings by this  
board."

### NEW GRANGE IN SISKIYOU

State Master Joseph Holmes writes  
that he has just organized a grange  
at Little Shasta Valley, Siskiyou Coun-  
ty, with a charter membership of 40.  
It is called "Big Springs Grange after  
the big spring from which is irrigated  
considerable land in that locality. The  
settlers are clearing the land of jun-  
iper trees and are growing and plant-  
ing alfalfa which is the principal crop  
and does well as is evidenced by the  
big stacks of it still standing in sev-  
eral places.

"On account of the open winter live  
stock look well, especially when we  
take into consideration that some of  
them do not get anything to eat ex-  
cept what they pick up on the outside.  
At Sisson there was no snow, which at  
this time of the year is usually from  
four to six feet deep.

"The officers of the newly organized  
grange are: Master, Joseph Stallcup;  
overseer, A. M. Snyder; lecturer, Mrs.  
Joseph Stallcup; steward, Orlo  
Dwinell; assistant steward, Harold  
Morrison; chaplain, M. L. Johnson;  
treasurer, J. P. Dwinell; secretary,  
Olympa Roberts; gatekeeper, Rolan  
Little; Ceres, Mrs. R. P. Winters; Po-  
mona, Mrs. E. Morrison; Flora, Miss  
Flora Neate; lady assistant steward,  
Miss Jemima Roberts; pianist, Miss  
Neva Dwinell.

### NEW FOOD ADMINISTRATORS APPOINTED

Food Administrator for California  
Ralph P. Merritt has appointed Louis  
M. Cole food administrator for the  
city of Los Angeles; G. H. Welch,  
food administrator for Los Angeles  
County; Paul J. Pitner, food adminis-  
trator for Pasadena. A fish commis-  
sioner for Southern California will  
soon be named. As to the fish situa-  
tion Mr. Merritt says:

"All salt-water fishermen must ob-  
tain a federal license before the first  
of March if they intend to remain in  
the business. In order to assist the  
fish industry and to keep a careful  
watch on these fishermen I will ap-  
point before the end of the week a  
fish commissioner for Southern Cali-  
fornia. His district will be the Mex-  
ican line on the south and Point Con-  
ception on the north. This man will  
be a friend of both sides—the fisher-  
men and the packers—and will know  
the fishing industry thoroughly. This  
is being done to assist in the develop-  
ment of the canning and fresh fish  
industry. It is an extremely import-  
ant matter, owing to the rapid de-  
velopment of the canning industry in  
this section. Also because Southern  
California is at present receiving a re-  
stricted quantity of fresh fish. Much  
good has been done by the local coun-  
ty council of defense and we propose  
to use the data collected by them.

"The food administration will not  
attempt to regulate the price, lacking  
the power to do so, but we do propose  
to increase the supply of fish, thus  
lowering the price. This price will  
not be exorbitant, but will yield a fair  
profit to the fishermen."

Mr. Merritt also intimated that  
there was soon to be an investiga-  
tion by the state fish and game com-  
mission, and others interested in the  
fish industry, relative to the changing  
of the present laws in regard to the  
three-mile limit and restricted fishing  
grounds.

We Manufacture Levelers for Any Power From 6 Horses to a 75 H. P. Tractor

## A Schmeiser Leveler of the "Giant" Type

WILL WORK WONDERS ON YOUR FARM

Moving immense amounts of dirt daily, and working on ground too tough  
for horses and Fresno to tackle, SCHMEISER POWER LAND LEVELERS  
are now being used with utmost success by a great many ranchers, large and  
small—also by contractors—saving their owners time, labor and money.

WE SEND THEM ON THREE DAYS' TRIAL

So extremely simple, a child could operate one, as a simple twist of the  
wrist raises and lowers the bucket or holds it stationary, as the case may re-  
quire.

Send today for full information and our  
latest catalog of earth-moving machines.

## Schmeiser Manufacturing Company

22 Mechanic St.

Davis, Cal.

Manufacturers of

Sure Pop Almond Hullers and Separators, 3 sizes; McGarvin Fruit and Olive  
Graders, any size; Schandoney & Harrington Equalizing Hitches, any size;  
Diamond Special Harrows, Baker Clips, Clevises; Martin Farm Ditcher and  
Road Grader, and Schmeiser Portable Automatic Hay Derricks.

## Kill Squirrels Gophers

The only exterminator that is 100  
per cent efficient and guarantees results  
or money back, is

## KILMOL SQUIRLGOPHENE

It contains special chemicals. Kil-  
mol fumes not only asphyxiate the  
squirrel or gopher, but eat away their  
lung tissues. Even should the animal  
reach fresh air, he can't survive. No  
other exterminator is as effective as  
Kilmol. That's why Kilmol costs a  
little more—but economy in labor  
warrants the advanced price. For best  
result use prepared waste balls saturated  
with Kilmol.

New formula of U. S. Govern-  
ment Poisoned Barley is effective in  
dry weather. Kilmol and U. S.  
Government Poisoned Barley are used  
and endorsed by the biggest and most  
successful ranch owners.

Remember, results guaranteed or  
money refunded.

Germain's Hairy Peruvian is a thoroughly tested and proven plant. It has been tried out and endorsed by State experiment stations and by experienced growers in both hot and cold countries.

Germain's Hairy Peruvian produces large leaves from the top to the crown of the plant, and as the leaves contain the greatest and best part of the food value — every grower who wants bigger and better crops should plant it. Don't fail to place your order at once. Send for illustrated folder containing testimonials.

## Who's Who

With the issue of August 11 the Cultivator started its series of "Who's Who" articles to bring before its readers some of the livestock producers of California who are responsible for the large development of the industry. Where did they come from and how long have they been engaged in California development, also how do they look, so pencil and camera are to be used, and some homely, everyday photographs and notes regarding them will bring us closer together. Bear in mind we say "homely photographs" and not photographs of homely people. The idea we wish to convey is that so far as possible we will secure photographs in everyday surroundings at the homes of the livestock producers.

Written for California Cultivator By C. A. Briggs

### W. S. GUILFORD

**W**AY up on the west side there is one of the state's livestock live wires. Always on the go, always full of life, good nature, helpfulness, general joy of living. One of his names is pep; the other is Guilford, though his friends, and that includes everybody, call him "Gil."

W. S. Guilford has crowded much of success into his 35 years. As a boy he gained experience with stock at the

W. S. Guilford

Lakeside Stock Farm and local stock yards and decided then to be a breeder of fine stock. He graduated from the Storm Lake High School and from the University of Wisconsin college of agriculture, was editor of the Wisconsin Agriculturist at Racine, Wisconsin. In this capacity he came

in touch with leading breeders, educators, newspaper men and others interested in live stock and agriculture, and his quick, active mind gained much from the association. At this time he was a member of the executive committee of the National Live Stock Association for Wisconsin. Later he acted as general agent for the Seabury Live Stock Company of Denver, covering the territory from Canada to Texas, widening his experience of stock and stock men. He was assistant general manager of the first three National Live Stock shows held at Denver; director of agriculture Twin Falls, N. S. Light and Water Company at Jerome, Idaho; director of agriculture Superior California Farm Land Company, Willows, California, where he is at present employed; these are some of the important positions he has held, all adding to his experience as a stockman and agriculturist. Mr. Guilford has directed the purchase and breeding of the Berkshire herd of the Superior California Farm Lands Company at the Monroeville Orchards in Glenn County, and of the Shorthorn, Berkshire, Shropshire and Pony herds at the Butte City Ranch at Butte City. In addition to his other activities he is president of the Glenn County farm bureau, president of the Glenn County Berkshire Breeders' Association. He has served one term as president of the Western Berkshire Congress, and is a member of the International Live Stock Association and the Saddle and Sirolo Club of Chicago. Whew! how does he find time to do it all and always have time left for a pleasant word, smile and a helping hand for every one?

## Northern California Live Stock Notes

Written for California Cultivator by W. S. Guilford

### IMPORTANCE OF RESERVE FEED EMPHASIZED

**T**HIS has been a very trying year for stockmen who depend on grass exclusively for their feed. We have had two storms that have helped a little, but the ground is dry, except for an inch or two, and grass has made very little growth. Dry weather and drying north winds have been the rule all winter. We have had a little rain this week (ending February 9), and it came just in the nick of time. Some stockmen were talking about selling. Hay is scarce and very high in price.

All of which emphasizes the fact that it is a good thing to have a reserve stock of hay or silage on hand for emergencies like this that cannot be foreseen. On our ranch we never want to see the bottom of our hay barns, and it does not make us feel badly to carry over silage. The stockmen who are in the best position in Glenn and surrounding counties today are the small farmers who have both hay and silage. A number of big operators have told me that they never will be caught again in the shape that they now are, even if they have to cut down to such numbers as they can run on irrigated alfalfa land.

### LOTS OF LAMBS COMING

Lots of lambs are being dropped now, and the weather conditions have been very favorable. More and more ewes are being lambing in sheds and barns where there is no danger from exposure in case of storm and where it is easy to give attention to any ewes that have trouble in lambing. There is considerable guessing as to what lambs and wool will be worth. With the high prices that ewes have been selling for and with feed conditions as they are both will have to be high if sheepmen are to make any money.

### EXERCISE IMPORTANT FOR SOWS

There have been a good many hogs in the rice fields all winter. The dry weather has made it possible for them to make a splendid clean up of the rice stubble. Now some of the sows are having pigs, and the size and vigor of the litters from these sows that have travelled miles every day during their period of pregnancy is a great argument in favor of plenty of exercise.

We had another case in point come up recently. A customer who had bought a number of sows said, "Can you tell me why it is that the pigs we

are getting from the sows we bought from you are so much bigger and stronger and more vigorous than those from our sows?" (The sows in this

## THE SELF-OILING WINDMILL

has become so popular in its first three years that thousands have been called for to replace, on their old towers, other makes of mills, and to replace, at small cost, the gearing of the earlier Aermotors, making them self-oiling. Its enclosed motor keeps in the oil and keeps out dust and rain. The Splash Oiling System constantly floods every bearing with oil preventing wear and enabling the mill to pump in the lightest breeze. The oil supply is renewed once a year.

Double Gears are used, each carrying half the load. We make Gasoline Engines, Pumps, Tanks, Water Supply Goods and Steel Frame Saws.

## IRON AGE

GARDEN TOOLS

Answer the farmer's big questions: How can I have a good garden with least expense? How can the wife have plenty of fresh vegetables for the home table with least labor?

IRON AGE Combined Hill and Drill Seeder solves the garden labor problem. Takes the place of many tools—stored in small space. Sows, covers, cultivates, weeds, ridges, etc., better than old-time tools. A woman, boy or girl can push it and do a day's handwork in 60 minutes.

30 combinations, \$4.50 to \$30.00. Write for booklet.

Batemann M'F'g Co., Box 40C Grenloch, N. J.

Dixon & Griswold, Agents for Iron Age Tools  
148-48 North Los Angeles St., Los Angeles, Cal.

other herd have been rather closely confined.)

Our only answer to the question was that the sows had been in a big woodland pasture, and that they were in fair condition, their flesh was firm, their muscles hard, and they had had to get lots of exercise in order to make their living. Then they had access to a wide range of feed—roots, berries and wild feed in addition to alfalfa and grains.

A LITTLE CARE AT THE RIGHT TIME

It is frequently possible to save an entire litter, or a part of a litter of pigs, by being on hand to give a little attention at the right time. In most cases it pays to take the pigs from the sow as they are dropped and keep them in a box by themselves until the sow is through farrowing. If, however, she is too long about it, it may be necessary to let the four or five that are out have a suck before the balance come. If the weather is cold it is a good thing to have a warm brick and some dry sacks in the box, which should be one with high sides so that the pigs cannot jump out. After the pigs all have a "bellyful" of warm milk and the sow has settled down, they can be left with her. There is a big difference in sows as to their ability to take care of pigs. Some seem to be just naturally clumsy, while others are natural mothers. They hover the litter as a mother quail does a covey of young and are careful not to lie down on the pigs. A sow of this kind has a high value that is demonstrated only by experience and should be sold only in an emergency. This is the kind of animal that the Register of Merit is meant to include.

MUCH GOOD LOOKING GRAIN

In spite of the very dry season and the fact that the ground is dry all the way down, a large part of the grain acreage looks good, and if we have plenty of rain from now on, and a long, cool spring, we may have a big crop again. It is the observation of many old timers that a so-called dry year is generally better than one that is too wet, especially during the early part of the season.

### DAIRY COMPETITION FOR CALIFORNIA CULTIVATOR PRIZES

Prof. F. W. Woll, in charge of the State Dairy Cow Competition, sends the following report for January performance of herds competing for the three \$100 prizes offered by the Cultivator:

Owner	No. Cows	Ave. Lbs. Butterfat
Herds of 10 to 25 Cows		
Floyd Beebe, Woodland	19	31.21
J. W. Coppini, Ferndale	20	26.57
Herds of 26 to 50 Cows		
Iver Iversen, Arcata	37	37.51
W. Terkelsen, Ferndale	27	29.91
G. E. Trigg, Ferndale	35	20.48
Herds over 50 Cows		
Coppini & Coppini, Ferndale	43	17.21
John Hansen, Loleta	87	27.73

It is planned to hold a Dairy Farmers' Conference at the University Farm, March 15 to 16, the central feature of which will be the awarding of the prizes offered in the dairy cow competition by Dean Hunt at the evening session of March 15.

Silo building demonstrations have been held during the year by county agricultural agents in Navajo, Yavapai, Maricopa, Pima, Pinal, Cochise and Graham Counties, Arizona. In consequence many new silos have been erected this year, and many more are planned. The pit silo, described in a recent Cultivator, is a favorite in Arizona.

# ALPHA PUMPING ENGINES

1½ to 28 H. P. For Gasoline and Heavy Distillate

DESIGNED for maximum power on the lowest fuel consumption. The finest materials are used—perfectly machined and fitted to give long uninterrupted service. The ALPHA will require practically no attention and is insurance against expensive delays and breakdowns during the pumping season.

## Home Cheese Making

IN RESPONSE to several requests the Cultivator gives here directions for making a cured cheese from whole milk. It is necessary for success to follow directions exactly.

### Aeration and Cooling

The best time to make farm dairy cheese is immediately after milking. First pour the milk from one vessel to another in some locality where the air is pure and fresh, raising the vessel well so that the air can pass through the milk as it is poured out and carry off the animal heat and odor. Then pour the milk into the vat, or, if no regular vat is at hand, use a large wash boiler.

### Coloring

If it is desired to have more than the natural color, so that the cheese will look rich, add about a teaspoon of cheese color to 16 gallons of milk. To do this properly take a large dipper half full of milk, mix in the color thoroughly, and stir the whole into the vat of milk.

### Rennet

Now add rennet extract at the rate of one ounce to 100 pounds, or 12 gallons, of milk. Mix the extract with half a dipper of cold water and then pour into the milk. Rennet tablets may be used instead of the extract, one small tablet for every five gallons of milk, or one large tablet for 25 gallons. Small tablets are about the size of a dime; large tablets are about as large as a silver quarter of a dollar. Dissolve the tablets required in a small quantity of cold water, then pour into the milk. The rennet extract or the tablets may be procured from any dairy supply house and at many drug stores.

### Temperature

Great care should be taken not to have the milk at a temperature below 86 degrees Fahrenheit nor above 90 degrees when the rennet is put in.

### Curdling

After the rennet is put into the milk, stir gently two or three minutes, then let stand until the curd is firm enough to cut. The milk should begin to curdle in from ten to 12 minutes. To ascertain when the curd is ready for cutting, push the forefinger into the milk at an angle of 45 degrees until the thumb touches the milk; make a notch in the curd with the thumb, then gently raise the finger; if the curd breaks clean across the finger without any flakes remaining on it, the curd is ready for cutting. A little practice will soon enable the operator to tell the best time to cut.

### Cutting

For cutting, regular cheese knives are best, one with horizontal blades and one with perpendicular blades. In case it is intended to make only a few cheeses, a wire toaster may be used, the wires only about a half inch apart. First cut lengthwise, then crosswise of the vat or boiler, until the curd is cut into cubes about the size of small kernels of corn.

### Cooking

After cutting, stir the curd gently for about three minutes, then heat slowly to 98 degrees or 100 degrees Fahrenheit, constantly stirring gently while the curd is being heated. Keep the curd at this temperature for about 40 minutes. To tell when the curd is sufficiently cooked, take a handful and press it gently, hold for a moment, then open the hand, and if the curd

falls apart it is firm enough. As soon as the curd is sufficiently cooked, draw off the whey. Then the curd is ready to put into the cheese mold, or hoop.

### Molding

Fill the mold by taking a double handful of curd at a time and pressing in gently until the mold is full and well rounded up. Regular Gouda molds are best, but any tin or wooden receptacle will answer if small holes are made in it to allow the whey to escape. The cheese should be from eight to ten inches in diameter and about three inches thick. Then take the cheese out of the mold and turn it upside down and replace it. Put on the cover and put the cheese to press.

### Pressing

The press may be about 12 feet long; a broken wagon tongue answers the purpose very well. Set a strong box, on which the mold may be placed, about three feet from a wall, post, or tree; on the latter nail a slat and under it put one end of the lever. Put a circular board about six inches in diameter upon the mold and on this rest the stick or lever. A pail containing a few cobblestones will answer for the weight. Do not apply full pressure at first, but let the weight hang about halfway between the mold and the outer end of the stick. Let the cheese remain a few hours in the press; then take out and dress.

### Dressing

To dress a cheese, first put it in warm water for a few moments and then wipe dry and rub smooth. Take a piece of linen cloth about six inches wide and long enough to go around the cheese and lap over a few inches. Wrap the cloth smoothly around the cheese, folding the edges down carefully over the sides; then put a circular cap of cloth of suitable size on each side. Replace the cheese in the mold, with the bandage or dress all smooth, and put it under the press, moving the pail to the end of the stick. Leave the cheese in the press for about 20 hours; then take it out and salt it.

### Salting

The cheese may be either dry salted or brine salted. Brine salting is the better way. Make a solution of salt and water as strong as it can possibly be made; put the cheese into this brine and sprinkle some salt on the surface which is exposed as it floats. Leave the cheese in brine for two and a half days, turning it over every 12 hours. For dry salting rub salt onto the cheese, and all over it, twice a day for three or four days.

### Curing

Next, put the cheese on a shelf in the cellar for curing. It must be turned and rubbed with the palm of the hand every day for a week or two; after that twice a week will suffice. While curing, cheese should be occasionally wiped with a cloth dampen in warm water, and if it gets a rough rind smooth it by using a brush and warm water. The temperature best adapted for curing is from 55 degrees to 65 degrees Fahrenheit, and the air should be as moist as possible. A cellar with a suitable and even temperature and not too dry is therefore a good place for curing. The cheese will be ready for use in from two to four months. The lighter the cheese is salted the sooner it will be ready for use, and the more the curd is cooked the slower it will be in ripening and the longer it will keep.

## Good For Man And Beast

Kendall's Spavin Treatment has now been refined for human use. Its penetrating power quickly relieves swellings, sprains, bruises and all forms of lameness. It is just what you need around the house. Write for many letters from users to prove its effectiveness.

B. Young, Franklin, Va., writes: "I have been getting such good results, I now use your Spavin Treatment as an all purpose family liniment, and have found it to do all you claim and more."

## Kendall's Spavin Treatment

For Horses — And Refined for Man

has been used by horsemen, veterinarians and farmers for over 40 years. Its worth has been proved, for spavin, splint, curb, ringbone and the many other hurts that come to horses. Read this letter from John Freezer, Henryton, Md.

"I recently used Kendall's Spavin Treatment on a colt that had been kicked. Before I had used half the bottle the swelling was all gone and he has completely recovered. I also find it good for bruises, sores, burns and colds on the chest."

Get Kendall's Spavin Treatment at any druggist's. For horses \$1.10 bottle — 8 for \$5.50. Refined for man, 55 cts. — 6 for \$2.75. "Treatise on the Horse" — Free from druggist, or write to

## Bottle Fed Lambs

Written for California Cultivator By C. A. Briggs

IN THE spring of 1917 the J. S. Gibson Company Ranch at Williams fed 440 lambs on the bottle and Gion W. Gibson, the ranch manager, states that 350 of them made strong healthy sheep, a little smaller than ewe fed lambs, but this can probably be accounted for by the fact that they were all the runts of twins, in every

tried but proved a failure, the lambs being unable to digest it. Feeding was at the rate of one-half pint five times a day for the first ten days, a little more than one-half pint four times a day for the second ten days, then a pint three times a day the rest of month, when ration was increased to a quart twice a day. Better results would have been secured by feeding

Method of Arranging Bottles for the Lambs

case the smaller, feebler animals being chosen, leaving the better lamb with the mother. Special racks were made to hold the bottles which were fitted with ordinary nursing bottle nipples of the Ware type. Whole milk was fed for ten days, one-half whole and one-half skim for 20 days, skim milk for the final 30 days. Five per cent of lime water, or one quart

oftener during the entire period.

The lambs were a cross between Shropshire bucks and Merino and Mexican ewes. Better results can be obtained with smaller numbers of lambs, not to exceed 25 on a farm. Lambs should be collected, one of twins, weaklings likely to die on the range, and orphans, and given out to farmers that can care for from one to 25

Bottle Fed Lambs

Satisfactory method of raising motherless lambs and making valuable property from waifs.

in 20, was used with the milk after the first 30 days. At this time he began to keep bran, ground barley and rolled oats constantly before them. At all times they were allowed to run out in good weather on grass. They were kept warm and sheltered at night and in stormy weather. Lamb meal was

in good shape. The children on the farm can care for them; valuable animals can be saved and a profit made. This should be done in every sheep raising section and no lamb lost through neglect. The experience on the Gibson ranch proves that it can be done in a wholesale way; it can be done even better in a small way.

## Avoid Maggot Injury

Careful methods of live stock management with some shifting of seasonal activities will greatly decrease the losses of animals due to the larvae of flies, according to Farmers' Bulletin 857, "Screw Worms and Other Maggots Affecting Animals," by F. C. Bishopp, J. D. Mitchell, and D. C. Parman, just issued by the United States department of agriculture. Among the preventive measures advocated to minimize injury from maggots are the burning or deep burying of carcasses of animals; the arranging of breeding operations so that young stock will be born in late fall, winter, or early spring; the carrying on in winter and early spring months of branding, de-

horning, and other operations resulting in wounds; the taking of steps about pens and fences and on range or in pasture to prevent injury to live stock; the destruction of ticks; and the poisoning and trapping of flies.

### Burn or Bury Carcasses

The burning or burying of carcasses is important, it is pointed out, since it is on such material that the maggots infesting wounds are chiefly dependent for propagation. If all decaying animal matter could be destroyed, the troublesome blowflies—the insects bringing about maggot infestation—would be practically exterminated. arrangement of breeding practices so

## MORE WORK FROM YOUR HORSES

Heavy spring work takes the surplus flesh from the horse. His collar no longer fits. His neck and shoulders chafe and gall. He can't do his full share of work and you lose money. Prevent these evils by using TAPATCO Pads.

### A NEW AND BETTER HOOK ATTACHMENT

Consisting of wire staple, reinforced with felt washer (note where arrows point). This gives the hook a better hold and prevents pulling off. The weakest point is made strong and life of pad greatly lengthened.

## How to double the life of your engine

THE life of your engine—whether in motor car, truck or tractor—depends on the lubrication it receives.

Any well-built engine can run, after a fashion, for weeks, sometimes for months, on inferior oil—but with rapidly decreasing efficiency. And then come troubles, in endless succession; worn and broken parts, requiring costly replacements, and, finally, the scrap heap.

Do you want this to happen to your engine?

### Sediment in ordinary oil means wear

Ordinary oil causes rapid wear because it breaks down under the terrific heat of the engine—200° to 1000°F.—forms large quantities of black sediment and evaporates rapidly through the oil filler pipe.

Sediment is the greatest cause of friction and consequent shortened life of automobile, tractor and stationary engines. It crowds out the good oil that should form a

Note that the ordinary oil contains five times as much sediment as Veedol

protecting film between moving metal surfaces. As sediment has no lubricating value, these metal parts grind together, producing friction and wear.

### How the sediment problem was solved

For years prominent engineers and chemists sought a new method of refining which would produce a lubricating oil that would not break down and form sediment under the heat of the engine, and that would give greater mileage due to minimum evaporation.

The result of their research was the discovery of the Faulkner Process. By this process—exclusively used by this company—was produced Veedol, the lubricant that resists heat.

### An 80-page book on lubrication for 10c

The most complete book ever published on engine lubrication, written by a prominent engineer and used as text book by many schools and colleges. Also contains Veedol Lubrication Chart, showing correct grade of Veedol for every car, winter or summer. Send 10c for a copy. It may save you many dollars.

that young animals are born during the cool months of the year and the management of dehorning and other operations so that wounds are made during the cool season only, would minimize the danger of infestation, since most of the flies are scarce at such times. The elimination of projecting nails, splints, and barbs on buildings and fences and the clearing out of thorny underbrush on the range and in the pasture would prevent many accidental wounds in which maggots might develop.

### Destroy Blowflies

Flies often lay their eggs in blood spots formed on the hides of animals by the crushing of engorged ticks, and the maggots on hatching are enabled to enlarge the punctures made by the ticks and so enter the flesh. The destruction of ticks, therefore, reduces the liability of maggot infestation. Many blowflies can be trapped by exposing the carcasses of small animals or pieces of meat in traps about barnyards, in pastures, near water holes, etc. The bait should be changed every three or four days to prevent maggots reaching full development, and the flies caught should be killed also. By poisoning with arsenic the carcasses of large animals which can not be promptly burned or buried, large numbers of flies can be killed. The animals should be partly skinned, the flesh slashed, and a solution of one pound of white arsenic boiled in five gallons of water should be applied freely. After a few days the animals may be turned over and the other side treated similarly. The carcasses should then be burned or buried.

### Treatment of Wounds

Stock should be carefully watched and when the presence of maggots is discovered in wounds or in soiled wool appropriate remedies should be applied. Chloroform is the best remedy to apply to kill the maggots in wounds. After the wound is cleansed some effective fly repellent such as pine tar should be smeared over the wound and about its edges.

### HOG SHIPPING REGULATIONS AMENDED

Amendment 3 to B. A. I. order 245 effective January 2, 1918, which provides for interstate shipment of hogs for purposes other than slaughter makes some changes, one of which will doubtless stimulate trade in stock hogs to no small extent. Amendment 1 to this order effective July 1, 1917, requires that hogs given "simultaneous inoculation method" of treatment for prevention of hog cholera be held under supervision for a period of seven days before shipment. The new amendments eliminates this period of supervision and provides practically the same restriction as for hogs treated by the "serum alone method." All such shipments however must be made to states the regulations of which provide for the segregation of imported hogs for at least three weeks and subject of course to all other state regulations at destination. Minimum doses of serum and of virus are also designated in the new order.

### SHIPPING LIVE STOCK BY EXPRESS

A carload of 28 fat cows and bulls were shipped by express from Omaha on January 22 to a dealer at Brighton, Massachusetts, to fill an order for live cattle to be slaughtered for Kosher purposes. This novel means of making the shipment was adopted to avoid delay due to bad weather and to freight congestion in the East. A few days later two additional cars were received by the same dealer via express from Chicago. The cattle in the shipment from Omaha were given two feedings en route and when slaughtered dressed an average of 754 pounds to the carcass. Those received in the first shipment from Chicago averaged 903 pounds dressed weight.

### HEREFORDS Unregistered Herds

4000 Head Both Sexes Same Breeding as Registered Herd  
Elevation 3000 Feet

Scharbaaur & Eldson, Midland, Texas

Field Notes From the  
Live Stock Men

H. E. Cornwell, Modesto, has rebuilt his herd of registered Holsteins up to about 35 head, including a number of fine young daughters of Prince Hiske Walker.

J. A. Pelanda, Modesto, recently headed his good herd of registered Holsteins with a son of the noted show bull, Hazelwood Posch Ormsby, grand champion at Panama Pacific Exposition, out of a granddaughter of Beauty Pietertje Butler King.

E. F. Young, Modesto, is building up a promising herd of registered Holsteins headed by a good record son of the great young sire, Dutchland Sir Pietertje Creamelle.

A. M. Bibens, Modesto, has a herd of registered Holstein females of which great productive records may be expected, including a number of daughters and granddaughters of Sir Skylark Ormsby Hengerveld. One of the sweetest things in the herd is a young daughter of Prince Hiske Walker out of that great cow, Abby De Kol of Eastbank 2nd. The head of the herd is a splendidly bred young bull that is rapidly developing into a choice individual. This is Aaggie Cornucopia Pauline Count 40th, son of the famous bull Aaggie Cornucopia Pauline Count and the 27.37 pound cow, Nixola Nannette 2nd that milked 657.1 pounds milk in seven days.

E. E. Freeman, Modesto, has an exceptionally pleasing herd of deep, broad hipped registered Holstein cows and heifers, most of the breeding cows being granddaughters of Ignaro De Kol. The herd sire is Segis Pontiac De Kol Dutch, son of Segis Pontiac De Kol Burke and Miss Dutch who made over 30 pounds butter in seven days and 1025 pounds in one year, and her dam is Miss Blaney, 1008 pounds butter in one year. His three nearest dams thus all have yearly records above 1000 pounds butter in one year and also average over 30 pounds butter in seven days.

Luther Thompson, Modesto, is selecting a foundation herd of registered Holsteins with more than average care, building along lines that are bound to make this herd a factor among breeding herds of the state. The splendid young bull heading this herd was mentioned in a recent issue of the Cultivator, son of Sir Chima-cum Wayne and out of the 29.84 pound junior three year old, Chima-cum Maud.

Creamcup Holsteins, owned by M. Holdridge, Modesto, have recently made some remarkably good official records. The great 33 pound cow Tula De Kol Netherland Pietertje came back at past ten years of age and made 34.24 pounds butter in seven days under conditions that were not at all favorable for a high record. Her daughter, Creamcup Tula Pietertje Pontiac, made 29.70 pounds butter in seven days, thus becoming the highest record daughter of her sire, King Pontiac Ruby Burke.

Winifred Hotaling 2nd made 33.92 pounds butter in seven days and 30.54 pounds milk and 131.84 pounds butter in 30 days. She had a previous record of 874 pounds butter in one year, and is the highest record daughter of Brom Bones and out of Winifred Hotaling who is also dam of Winifred Hotaling 3d, 32.19 pounds butter in seven days.

Anselogess of Sleepy Hollow made 32.70 pounds butter in seven days, having a previous record of 897 pounds butter in one year. With this record she becomes the highest record daughter of Anselmo.

Mercedes Barbetta, owned by D. and H. Rowles, was also tested in the Holdridge herd and made 31.70 pounds butter in seven days.

Not only are these records great individually and as a group, but the cows themselves are all of remarkably good type and quality.

CHANGE IN STOCK SHIPPING REGULATIONS

The railroads west of the Mississippi river are revising their livestock contracts to conform to a recent ruling of the interstate commerce commission which becomes effective March 1, 1918, and is of considerable importance to shippers of ordinary livestock in the territory affected. According to the new form of contract shippers of ordinary livestock are not required to declare its value or to pay rates dependent thereon provided the

shipment is described as "ordinary livestock," or the kind or kinds of stock specified in detail. Animals valuable for special uses such as racing, breeding or show purposes should be so described in the contract if special valuation is expected in cases of damage.

Quick Plowing and Deep Cultivation Mean Bigger  
Crops for Uncle Sam and More Profits for You

NOW—more than ever before—you must work quickly and well. Farm and firing line must fight together.

America's acres must yield more than ever before. But the task of stimulating production is hedged about by difficulty.

Munition plants and factories have steadily drained labor from the fields. The new regulations place unskilled farm hands in the first draft class. Over a million horses already have been shipped abroad and the needs of our own army are yet to be filled.

You must replace muscle with machine.

The Cleveland Tractor will plow 3½ miles an hour—8 to 10 acres a day. That equals the work of three good 3-horse teams and 3 men.

This same time-saving speed, so profitable in plowing, is of equal advantage in harvesting, mowing, discing, spreading manure and other hauling work.

The Cleveland not only conserves time and labor but it does better, cheaper work.

Traveling on its own tracks, this sturdy little machine will go practically anywhere—even through ditches or gumbo, sand and gravel.

It will not pack the soil, nor mire, slip or flounder.

It weighs less than 3200 pounds and has 600 square inches of continuous traction surface.

Although small enough for work in orchards and among small fruit trees, the Cleveland develops full 12 h. p. at the drawbar for hauling.

At the pulley belt it gives 20 h. p.—plenty for stationary work such as shelling corn, cutting ensilage, filling silos, pumping, and many other uses on the farm where power is needed.

Rollin H. White, the famous motor truck engineer, designed the Cleveland Tractor. He uses only the best materials. Gears are the same quality as those of the finest trucks and are protected by dirt proof, dust proof cases.

Mr. White has so constructed the Cleveland that it steers by the power of its engine.

It will turn in a 12-foot circle. And can be housed in less space than it takes for a horse.

Put yourself in a position to produce the record crops called for by Uncle Sam—and incidentally to make more money for yourself.

Write to us today for complete information on the Cleveland Tractor and the name of the nearest Cleveland dealer. Address Dept. BF or use the coupon.

## Bean and Pea Weevils

Written for California Cultivator by E. R. de Ong

HERE are three species of weevil common in this state, which attack beans and peas. These insects lie dormant in cold weather but become active in early spring, at which time all stocks of beans not intended for immediate consumption should be examined for the presence of this insect, even though none were seen when the crop was stored. If weevil is found in any variety of small beans steps should be taken immediately to check them for this insect breeds in dry beans and a few insects present in February may mean almost a total loss of the stock by planting time. Their presence means not only a shrinkage in the food value but a serious loss in germinating qualities. Infested seed should never be planted for not only will this mean weaker plants but the weevil will be present

bean, and possibly peas, the work being similar in appearance to that of the common bean weevil. This species does not breed through the winter, but emerges from hibernation quite early in the spring, usually in March and April. The eggs are laid through April and May on the young bean pod which is now beginning to form, as this bean is usually grown in California as a winter plant. After the egg hatches the young larva bores through the pod and begins feeding on the young bean, emerging only when it has transformed into the weevil in the late winter or early spring. There is but one brood a year, there being no increase while the beans are in storage.

### Pea Weevil

The pea weevil (*Bruchus pisorum*) has but a single generation a year; the adults appear early in the spring and deposit their eggs inside or on

EFFECT OF WORK OF WEEVIL ON BEANS

when the new crop is setting and thus continue the trouble.

The life history and manner of feeding of all of them are somewhat similar. They range in size from one-eighth to one-quarter of an inch long, the color being gray or brownish with light markings. The head is held at right angles to and beneath the body; the wing covers are short so that the tip of the abdomen is exposed.

### Small Bean Weevil

The small bean weevil (*Acanthoscelides obtectus*) attacks especially our small varieties of beans. The adult weevil feeds on dry beans through the winter, except in the coldest weather, becoming active in the spring and laying its eggs first on the dry beans in the storehouse and later in the year on the green pods or the young bean when exposed by the cracking of the pod. The young larva hatching from these eggs bores into the green bean, causing a slight wound which heals readily and leaves only a slight mark. The larva hollows out the bean as it grows and finally pupates inside this chamber. At this stage the injury can readily be seen, the insect being protected only by a thin membrane. Several of these larvae or grubs may develop at the same time in a single bean, thus ruining it both for food and seed purposes. This weevil breeds readily in dry beans so that seed which is but slightly infested when stored in the fall may be valueless by planting time the following spring or summer.

### Broad Bean Weevil

The broad bean weevil (*Bruchus rufimanus*) attacks the broad or horse

the surface of the newly formed seed pods. The young larva or grub hatching from these eggs bores into the green pod, hollowing it out and leaving only a thin membrane over the entrance to its chamber. Usually there is but a single larva or grub to the pea, this infestation occurring in the field; there is no breeding in the dry pea as in the case of the small bean weevil, hence the extent of the damage is largely determined by harvest time. The adult insect hibernates throughout the winter, becoming active only with the coming of spring.

The damage to both peas and beans is similar; the weevil destroys from one-fourth to one-half the food value of the seed attacked, ruining its market value and injuring its germinating qualities, particularly the ability to mature a crop. The latter point is especially to be noted, for it is a common characteristic of all "weevilly" peas and beans that even when a fair stand is secured from such seed the plants are either sterile or set a very small crop. The injury to the germinating power of peas is very marked even though only a single larva develops in a pea, but with both the small and horse beans two or more larvae may be found in a single seed, and in case of the heaviest infestation the ability of the bean to produce a fruitful plant seems to be destroyed.

Prevention of attack by any species mentioned consists of harvesting the crop as soon as possible, and if infestation has already occurred, of fumigating with hydrocyanic acid gas at the rate of one ounce or more of sodium cyanide to every 100 cubic feet of space, the amount used varying with the tightness of the room.

## Ornamental Garden Notes

Written for California Cultivator by Ernest Branton

## The Primrose Jasmine

When I am asked what is the most satisfactory "really good vine" for general purposes my mind generally suggests *Jasminum primulinum*, the latest introduced and the best of the several species of jasmines. It grows the fastest, has the showiest flowers, has the heaviest and best colored foliage and also flowers in mid-winter. What more can we ask? I have seen it in many parts of California and it always gives satisfaction and is quite hardy. The flowers are large, borne in abundance and in color are a good primrose yellow, also semi-double, a really valuable evergreen climber for all purposes where a vine is needed.

## South American Shrubs

We get few shrubs from South America; the more common, no doubt, are the cestrum but these are not so desirable in any way as some of the escallonias or shrubby saxifrages. Then there are escallonias and escallonias. A half-dozen species are fairly common in California and four of them are white-flowering. Among these *E. Montevicensis* is by far the best and best of all species so far

tried in this state. It is a shrub that looks well at all times and under all circumstances and will fit into any scheme of planting where shrubs are wanted. This species at times flowers so heavily as to become an almost solid bank of white. It is not so easy of propagation as the other species and for that reason other and poorer species masquerade under the name *E. Montevicensis*.

## The Best Broom

The best broom is the one that sweeps away all competitors. This is what *Cytisus candicans* does at all times. It is, in common with all *cytisus*, also known as *genista* and is more commonly sold under the specific name of *fragrans* than under the rightful name of *candicans*. It grows to be the largest, most dense, and most free-flowering, at least in the southern one-half of the state. When well grown it is at time of blooming a solid mass of yellow and is very fragrant. In two years it grows in local gardens from two feet to ten feet in height and is standing alone; will grow to as many feet in all dimensions. Of about ten species I know fairly well I consider this the best.

## So-called Evergreen Dogwood

Some nurserymen have been accused in their respective catalogs of harboring an evergreen dogwood, but I have yet to see one, though local dealers have 'em. This species is not so decidedly deciduous as others, but is not entirely evergreen. It is, however, a very fine shrub which will rise to 20 feet in suitable soil and flowers just as does the fine so-called "flowering dogwood" of the Eastern states. This species is a native of the Himalayas and in addition to its proper name of *Cornus capitata* is also known as *Benthamia fragifera*. It is not hardy in the East, as are the more common sorts but is hardy enough throughout California. While it does not shed all its leaves in winter it "comes mighty near it."

## The Fox-tail Lilies

I feel quite confident that *eremurus*, the fox-tail lilies, may be grown in California and they should be given a trial. It is probable that they should have partial shade, a well-drained soil, be planted deeply and the soil kept cool and moist by a heavy mulch. Fine specimens to the height of 15 feet have been grown in states along the Atlantic Coast. In the damper climate of England and Ireland they thrive splendidly and it is quite probable that in California they will need a copious supply of water. They are still rare in America.

Carbon disulphide may also be used at the rate of ten pounds per 1000 cubic feet if the room is only approximately gas-tight; if not, double the amount of chemical used, or if the room has been especially constructed for fumigating purposes, three pounds of carbon disulphide to 1000 cubic feet of space or three-fourths of an ounce of sodium cyanide to 100 cubic feet should be sufficient at a temperature of 70 degrees Fahrenheit or above. A water-tight barrel covered with two or three thicknesses of glazed paper or tarpaulin tied down tightly may be used where small quantities are being treated. To operate, the barrel is filled with the material to be fumigated and a saucer or shallow pan containing about one-third of a cupful of carbon disulphide is placed on top of the pile, or the liquid is poured over the contents. The barrel should be kept covered for at least 12 hours and preferably for two or three days, for seeds that are to be used in planting the minimum time of exposure should be used. The material is examined carefully for any live insects immediately after treating and again in two or three weeks; if any are found the fumigation is repeated using a stronger dosage or a longer exposure, or else the work must be done at a higher temperature. The fumigated material should be protected against further infestation.

Hydrocyanic acid gas is to be pre-

Hand Cultivators Valuable

Opening furrows for fertilizers in beans and peas.

ferred for fumigating beans or peas to be used for planting as there is less danger of injuring the germinating qualities with this material than there is with carbon disulphide. Moist seeds should not be fumigated with either chemical, particularly in damp weather. It is especially important that infestation of small beans should be treated early, since two or three generations might develop from the time the crop is harvested in the fall to planting time the following summer.

The hot water treatment of beans and peas is quite satisfactory for small lots and may be readily applied to infested seed before planting. The method as recommended by Parker, in U. S. Bureau of Entomology Bulletin No. 96, is to suspend the beans in a cloth sack in a kettle of cold water, quickly raising the temperature until the thermometer reads 140 degrees Fahrenheit, when the beans should be removed immediately. The sack should be suspended in such a way that the sides do not touch the kettle and thus overheat any of the seed, and the beans stirred during the heating process. They may now be planted or dried and stored.

When but a single generation occurs, as in the broad or horse bean and pea, the weevil may be destroyed by holding the seed over from one year to another in tight bins or well-tied sacks, as these species attack only green peas and beans. When more than one generation occurs, as in the weevil attacking the small beans, nothing is to be gained by holding the seed for eventually the weevil will destroy every bean in the sack although only a few beans might have been infested when stored.

This Sign has helped \$10,000,000 worth of "Z" Engines to sell over 150,000 farmers of America who demand the best for their money

LOOK FOR THE DEALER- WHO DISPLAYS THIS SIGN

SEE this sign at your local dealer's where this \$10,000,000 "Z" Engine is in action. Get acquainted with the famous "Z" Engine for which 150,000 farmers of America have paid over \$10,000,000 in backing their judgment.

They had seen all engines — they decided — and "Z" engines are proving the wisdom of their choice everywhere today on their work.

3 & 6 H.P. Use Economical Kerosene

Also Distillate — Coal Oil — Tops — Gasoline

—These 150,000 practical Farmers saw the advantages of the "Z" Built-in Magneto, everything complete, no batteries to fuss with or buy.

—They figured out the savings using Kerosene, at half the cost of gasoline, getting more than rated power in the "Z."

—They wanted the strength, simplicity and staunch durability of the "Z" Engine with its gun-barrel cylinder bore—its leak-proof compression—quick starting—low first cost—low upkeep—Fairbanks-Morse Quality.

—They bought on demonstrated performance in action—regardless of price to get the biggest dollar-for-dollar values per H. P. ever built into an engine. They acted wisely.

The Service You Get When You Buy From Your Local Dealer

Your local dealer has just the type "Z" for your needs in stock—waiting for you. Buy from him. He is prepared to give prompt delivery and personal service right where you live.

### TREES

**For Sale**—Extra fine Valencia trees, ½ to 1½, all sour root, high buds, very thrifty, clean and straight, not fertilized, excellent soil for balling, nothing better grown. Can supply a limited acreage yet closing out entire lot of these fine trees. S. R. Coate, 564 S. Los Angeles St., Anaheim, Cal. Phone, Anaheim Pacific 403-J.

**Eureka Walnuts are the Best**—Grafted on native black roots. We also have some grafted on paradox roots, which means a hardy root system and a very prolific grower. Prices reasonable, write today, tomorrow never comes. Geyer Bros. Walnut Nurseries, 214 S. Alhambra St., Alhambra, Cal.

**Here is Your Opportunity to Secure A-1 citrus trees.** We offer several thousand 2-year-old lemons; Eureka and Villa Franca, also Washington navel; also several hundred Valencia on sweet root. We call these good trees and we know whereof we speak. ALBERT JACKSON, Upland, Cal.

**For Sale**—Fancy and standard varieties of Grafted Walnuts and Pecans. Largest variety of Walnut grafting wood in U. S. We are the oldest and most extensive propagators of walnut varieties in the U. S. Prices reasonable. Tribble Brothers, Lodi, Cal.

**For Sale**—8000 Valencia Oranges and Eureka Lemons, selected stock two and three year buds on sour roots. Large stock never culled nor neglected. 65c while they last. Nursery, Montebello, opposite Grammar School. Address L. F. Thurston, R. D. 3, Orange, Sunset Telephone 35J4.

**For Sale**—Bartlett Pears on Japan blight resistant roots 4-6 and 6-8 ft. Placencia Perfection and Eureka Walnuts on California Black root. All stock of very best quality. Prices reasonable. Write or phone your orders now. Los Nietos Valley Nursery, Downey, Cal. Phone 692.

**Let Us Show You Our Ideal** twelve hundred acre orchard from which these perfect yearling citrus trees were propagated. Healthy straight stock, budded one foot high on sour root growing in our own whittier. References. R. R. Morris, East Whittier, Cal.

**Walnut and Almond Trees**—Mayette, Franquette, Concord, and Willson Wonder on Northern California Black root. Texas prolific and Drake seedling almonds on almond root. Stock is first class, cannot be better. Write for prices. Ekstein Nurseries, Modesto, Cal.

**For Sale**—Valencia Orange and Marsh grapefruit trees. Stock propagated only from Performance Record Trees of best type. Trees that will bear and insure profits. Write today. L. V. W. Brown, Riverside, Cal.

**For Sale**—5000 Royal Hybrid and Black Walnut trees, two and three years old, ½ to 1½ inch caliper, 3 to 8 ft. Also Grafted Eureka and Eureka grafting wood. John Miller, R. F. D. 4, Box 278, Lodi, Cal.

**Pear Trees**—Offer several thousand Bartlett, 2 and 3 feet, heavy caliper at 9c each. French prunes. Trees of all kinds. No agents; we sell direct. Write for price list. Carlton Nursery Co., Carlton, Ore.

**By Far the Lowest Priced means of reaching a buyer for what you have to sell is through classified advertisements in California Cultivator.** The cost is only 3 cents per word per issue, with a minimum of 35 cents.

## HOGS

**The Billiken Brand of Chester Whites**—There is right now a big shortage of swine in California. The output of 1918 will show even a greater shortage unless the farmers of this state get busy and raise more hogs. Good breeding stock is scarce and hard to get. **THE BILLIKEN BRAND** represents the best obtainable; they are of that mellow type that mature early and are such satisfactory easy feeders. Get started with this strain and help out the Food Administration and your own pocket as well. Write me your wants—do it today. I can still furnish first class animals at reasonable prices. C. B. Cunningham, Mills, Cal.

**Grape Wild Farm Berkshires and Guernsey Bull Calves**—Only a few more boars left from 6 months to a year old, sired Grand Leader 2d, the Grand Champion of the world. Also a few of the tops from our fall litters by Royal Superbus and Fashion Longfellow 27th, and a few bred gilts. Our herd won the Premier Breeders' Ribbon at the P. P. I. E. A. B. Humphrey, Escalon, San Joaquin Co., Cal.

**Bernsteins Herd**—"One of the Best in the West" has three great herd boars. King's Big Bone Leader, Young Jumbo, and King's Massave Orange. Watch for the sensational offering of sows bred to this great trio which sell in the Big sale of the Kings' County Poland-China Breeders at Hanford, February 20. Bernsteins Ranch, Hanford, Cal., W. Bernstein, Proprietor.

**For Sale**—Several four and five months old Poland-China boars, registered. Something that you will be proud to place at the head of your herd. Write for price and information. Address H. B. Peake, Manager, 358 11th St., San Bernardino, Cal.

**Superba, World's Grand Champion Poland-China boar** and one of the greatest sires of the breed. Spring boars ready for service, also few sows bred to this noted sire, reasonably cheap. Rough's Greenfields, Arlington Sta., Riverside, Cal.

**Duroc-Jerseys**—Sold out of bred gilts. Two service boars. One of them an outstanding individual for sale. Also Fall Pigs, both sexes. Twenty-three ribbons on 11 entries, including 6 championships, State Fair, 1917. Frederick M. Johnson, Napa, Cal.

**Berkshires**—First prize junior boar; first and second senior boars including junior champion; fifteen spring and fall open gilts sired by Ames Rival 115, champion boar; and two junior yearling bred sows priced cheap for immediate sale. F. D. Hall, Perris, Cal.

**We Pay Cash for Hogs of All Sizes**, weights and breeds. Any number from one to several thousand considered. What have you? Durbin and Forbes, 722 San Fernando Building, Broadway 4170, Los Angeles.

**Duroc-Jerseys**—The blood of champions such as Defender, Orion Chief, Taxpayer "13," Golden Model. A few choice fall gilts of Grand Champion. Breeding at reasonable prices. T. R. Bond, Tip-ton, Cal.

**For Sale**—18 Poland-China brood sows, 3/4 pure bred, 8 with litters. 1 registered pure bred Berkshire boar. 66 pigs 3 months old. All vaccinated except sucking pigs. H. R. Greene, Riverside, Cal.

**Chester White Thoroughbreds**—2 1/2 months, \$10.50; 4 1/2 months, \$20; also 3 fine 9 months gilts. Cedarhurst Ranches, R. D. 2, Sacramento.

**Large Yorkshires**—The ideal hog for the progressive farmer. Service boars and fall pigs, both sexes, for sale. A. L. Tubbs Co., Calistoga, Cal.

**Recorded Poland-China boar**, 18 months old, sired by Superba. Bargain at \$50.00. Immuned, and tried breeder. C. R. Hanna, Riverside.

**PLW Durocs**—Golden Models and Great Wonders are the most consistent winners at every show. Peters, Lamson & Walker, Devore, San Bernardino County, Cal.

**Large Type Poland-Chinas** are prolific and profitable. Can furnish boars any age at reasonable price. J. A. Crawshaw, Hanford, Cal.

**Rancho Rubio Durocs** all sold out except some choice fall boar pigs. Write for prices. Elmer Lamb, Ceres, Cal.

**Greenwood Farm Durocs**—"Size with Quality." H. C. Witherow, Palo Cedro, Shasta County, Cal.

## TURKEYS

**Just One Grand Champion Sweepstakes** Special offered for the best pair of turkeys in the show at the California State Fair, 1917, and that prize was won by GOLD NUGGET STRAIN GIANT BRONZE TURKEYS. They again proved their superiority by winning at three great shows, California State Fair, 1917, Texas State Fair, 1917, Los Angeles, 1918. Gold Special Sweepstakes at all three shows. Each judge pronounced them the best in the show, all breeds competing.

Remember it was the Gold Nugget Strain that won at America's greatest turkey show, World's Fair, San Francisco. Three prizes on four entries. Large turkeys can be raised at practically the same cost as small ones. My toms will give you an increased weight of five pounds the first year. Either stock or eggs will give you vitality, size and beauty. Address all communications to J. Will Blackman, 607 East Third St., Los Angeles, Cal.

**Turkey Breeders Attention**—I have a few very choice young toms for sale for breeding purposes from the finest flock of Giant Bronze turkey stock in the state. Goldbank the 2nd stock. **Mammoth Bronze turkey** leaders of Imperial Valley toms, 8 months weight 26 to 30 lbs., price \$15.00 to \$25.00 each. E. V. Blaschko, Silsbee, Cal.

**Eggs—Bourbon Red and White Holland** turkeys, Toulouse geese, Guineas, Buff Orpington chickens. E. A. McKinley, R. D. Ukiah, Cal.

**Giant Bronze Turkey Eggs** from America's leading strains. M. M. Reiman, Planada, Cal.

**For Sale**—White Holland Turkeys. Fine breeding stock. \$5.00 each. 135 S. Aurora Ave., Watts.

## FOR EXCHANGE

**For Exchange**—80 acres rich level soil. Casa Grande Valley, Arizona, for smaller acreage in California. Address L. F. Beatty, Bremerton, Wash.

## CATTLE

**CALVES — CALVES — CALVES** I will have about 3000 head of calves for sale this spring. Can furnish a number of extra fine heifer calves from dams producing as high as 70 lbs. milk daily. Can also furnish some beef calves, mostly bulls. Will guarantee safe delivery to all railroad points in California. Send for prices at once as calf season is on at this time. Smith, the Calf Man, Tillamook, Ore.

**Guernseys**—We will sell stock from our prize winning, high producing herd, at reasonable prices, valued according to individuality and breeding. Our supply is limited but if the buyer wants a number of animals and will write us we will furnish him with particulars. Revada Guernsey Farm, Yountville, Napa Co., Cal.

**SHORTHORN CATTLE, SHROPSHIRE SHEEP, Berkshire Hogs and Shetland Ponies.** Get our prices and descriptions before buying. Butte City Ranch, Box C, Butte City, Glenn Co., Cal. W. P. Dwyer and W. S. Guilford, Owners.

**45 Hereford Bulls (Weaners)**—All purebred mountain raised, priced around \$125.00 head. Not blowed up with fat and air to sell them but in their everyday clothes. You won't be disappointed when you see them as they are as good as lots of people will ask around \$300 for. C. B. Johnson, Raymond.

**Pedigreed Bull Calves**, Registered \$50.00, unregistered \$25.00. Service bulls \$75 and up. Good individuals from producers. Cows with yearly records at a profit, tuberculin tested. Write or come and select. Horses. N. H. Locke Co., Lockeford, Cal.

**D. O. Lively Stock Farm, Inc.**, 215 Hobart Bldg., San Francisco. Breeders of Hereford cattle. A few choice heifers for sale. We buy and sell live stock on commission. Farm at Mayfield.

**Veramont Stock Farm**—Pure Bred Herefords. Only 2 pure bred and 2 grade bulls left. One 11 month Hampshire ram. Prices right. H. M. Barngrover, San Jose.

**Am Offering Registered Holstein A. R. O.** cows and bulls of serviceable age. Write for particulars. J. W. Benoit, Route C, Modesto, Cal.

**Registered Holstein Bulls** from high producing dams for sale at reasonable prices. Also a few choice females. McAlister Sons, Chino, Cal.

**Venadera Jerseys**, the herd with official yearly records. Calves of both sexes for sale. Guy H. Miller, Route 1, Modesto, Cal.

**Ayrshires (registered)**—A few young bulls, heifers and cows in milk at a bargain for quick sale. A. MacMinn, Phoenix, Ariz.

**Young Holstein Bulls**, bred right, grown right, priced right. Creamcup Herd. M. Holdridge, Modesto, Cal.

**Sunshine Farm Jerseys**—Bulls from officially tested dams for sale. E. Greenough, Merced.

**Registered Holstein Bulls** of various ages for sale. Millbrae Dairy, Millbrae, Cal.

**Registered Jerseys**—Both sexes for sale. J. R. Carhart, Fullerton, Cal.

## FARM LANDS FOR SALE

**Buy Land Where They Raise the Prize Crops**, in Snohomish County. 40 acre farms, \$25 per acre. Ten yearly payments, 6 per cent interest. Visit our offices and see the great exhibit of PRIZE WINNING Vegetables, Fruits, Grains, Alfalfa and other Grasses raised on adjoining farms. They prove our claims that this is the best land in Western Washington. Paved roads. Four passenger trains a day. Graded School, Cannery, Creamery, Cheese Factory. Plenty of work for the laboring man in the mills and camps, where 75 settlers are all boosters. DON'T LOSE A DAY in asking for our illustrated literature.

BROWNELL LAND CO., 904 Third Ave., Seattle, Washington.

**For Sale**—In Indian Wells Valley, Kern County, 160 acres relinquishment. Good level valley land, all tillable. 60 acres cleared. 40 acres plowed and fenced. Well. Near live railroad town in new community. Telegraph, express and post office, two stores, garage, blacksmith shop, electric power, schools, grapes, alfalfa, cotton, etc. Plenty of pumping water. Good prospects of gravity water system. Owner not able to develop. Price \$10 per acre. Might consider light or medium weight auto as part payment. Address Owner, care of Cultivator.

**NO PAYMENT FOR TWO YEARS** RICH, LEVEL, TEHAMA SILT LOAM, IRRIGATED LAND AT \$150 PER ACRE. INCLUDING WATER RIGHT. NO BETTER ALFALFA, FRUIT OR NUT LAND. ONLY 3 MILES FROM RED BLUFF, CITY OF 5500 PEOPLE, ON STATE HIGHWAY. NO PAYMENT FOR TWO YEARS. 8 YEARS TO PAY. WRITE FOR BOOKLET AND SOIL MAP.

F. D. BURR CO., 219 MONTGOMERY, SAN FRANCISCO.

**For Sale**—400 acre hog and cattle ranch. Santa Monica mountains. 30 miles from Los Angeles. Several springs, partly fenced. A bargain at \$35 per acre. Jno. R. James, 602 O. T. Johnson Building, Los Angeles.

**Oregon, California Government Lands**—Booklet Free. Tells "How, Why, Where." Write Joseph Clark, Sacramento.

**For Sale**—10 acres, 3/4 acres grapes, fig border. House, barn, pumping plant. \$1000 cash, \$2000 mortgage. Edith Hyatt, Clovis, Cal.

## AUTOMOBILE TRAILERS

**All Sizes.** See our stock. Immediate deliveries. Lowest prices. Arnott & Company, Inc., 112-118 So. Los Angeles St., Los Angeles.

## GEESE

**Mammoth Geese**—I am booking orders for eggs from my mammoth geese at 25c each. Ship any time. Order all you want. PEA FOWLS—Still have a few pair of young pea fowls at \$10 per pair. Order now, they won't last long. Chas. McNeely, Alpaugh, Cal.

## MACHINERY

**REMANUFACTURED PIPE** All sizes, standard pipe, and wrought iron screw casing. All kinds of fittings. Guaranteed good as new. Write for prices. WEISSBAUM PIPE WORKS, 169 Eleventh St., San Francisco.

**Gasoline Engines**, the largest stock of used gas engines in California from 2 h. p. to 100. Thoroughly overhauled. Machinery Exchange, 733 North Spring St., Los Angeles.

**For Sale**—Holt caterpillar tractor, John Deere disc plow and harrow. W. O. Tingle, 456 North Lake Ave., Col. 6177, Pasadena.

**For Sale**—Bull tractors, on time payments; best small tractor made for all farm purposes. Will trade for dairy cows. P. J. Weisel & Co., Anaheim.

## AGRICULTURAL IMPLEMENTS

**IMPLEMENTS AND RANCH SUPPLIES.** Samples and slightly used. Four floors. Large stock. Liberal credit. Save 50 per cent on some. No branches. ARNOTT & COMPANY, INC., The Yellow Front. Established 1892 112-118 S. Los Angeles St., Los Angeles.

**For Sale**—Bean Sprayer with four holes, complete. Almost new. Reasonable. Address C. P. Stone, 1393 W 8th St., Divisadero, Cal.

**For Sale**—2 Royal Wheel Scrapers No. 2 complete with foretruck in good shape. Price \$75.00 McDill Bros., Indio, Cal.

## LIVE STOCK

**For Sale or Exchange** for land near coast, large black registered Jacks and Jennets, good as can be found in California. Address A. J. Allen, Perris, Cal.

**Registered Shires**—Blackhawk Stock Ranch. Importers and Breeders. Easton & Ward, Burlingame, Cal.

**Wanted**—Thoroughbred white Angora goats for breeding. E. C. Rogers, Chowchilla, Cal.

## GOATS

**Toggenberg Milch Goats**—Rae P. Williams, Federal Realty Building, Oakland, Cal.

## KILL GRUBS IN BACKS OF CATTLE

If the grubs which cause the lumps or swellings under the skin in the backs of cattle are allowed to remain they will complete their growth, drop to the ground and transform to heel flies, which may re-infest the cattle during the spring and summer. The grubs weaken the cattle, cause them to fall off in flesh and milk, and decrease the value of the hide. The beef in the immediate vicinity of a grub becomes slimy and of a greenish color and is known to the butcher as "licked beef." The damage to the hides is usually placed at one-third their value, and the loss of beef to each infested animal ranges from \$4.00 to \$6.00 in pre-war times. The cattle are also injured in the spring by the presence of the fly which causes them to fret and stampede. The grubs injure the hides and beef from January until June.

T. J. Talbert of the University of Missouri College of Agriculture offers the following suggestions for eliminating warbles: The grubs may be pressed out through the opening at the top of the swelling. A sharp knife and a pair of tweezers will often facilitate the work of removing the grubs. Care should be taken to crush all the grubs removed to prevent their future development and transformation into flies. It is advisable to examine the cattle for lumps or swellings over the back every two or three weeks during the late winter and early spring in order to destroy the pest. Various oils are often used, which may be either smeared over the infested regions or applied to the mouth of the breathing hole of the grub. One or two applications are usually sufficient.

The treatment may also be given wild cattle by driving them through a chute with a man on either side of the chute equipped with an oil can filled with kerosene, mercurial ointment or turpentine. As the cattle pass through the hand is pressed over the backs of the animals and each lump or swelling is treated with the oil by inserting the slender nozzle of the can in the opening at the top of the lump.

Arsenical preparations and tobacco decoctions are often used as sprays or washes for the backs of cattle, but the greasing lotions and oil sprays are usually more effective because they are more penetrating.

## 540 Egg "Pioneer" \$10 Down

then \$10 per month for four months. The "Pioneer" is the best and highest class hot water incubator made in America. Send today for free illustrated catalog.

### BABY CHICKS! BABY CHICKS!

We hatch 19 varieties of chicks, ducks, geese, turkeys, etc. Send for free 66 page illustrated catalog. Our Leghorns are all hatched from eggs from O. B. Hubbell, Van Nuys Ranch, no better stock in Southern California. Every Hen Hoganized twice in 1917. Write us your wants. No order too large, or small.

## Hens and the Farmer

Written for California Cultivator by Jean A. Koethen

HERE is a new slogan from the food administration—another new slogan, I should say, for it has a plenty, and they are all new—one that is both apt and timely. If we must raise more meat, what better meat can we raise than chicken? If we must do without meat, what better substitute is there than eggs? And who can so easily produce both chickens for meat and hens for eggs as the farmer? Here is the slogan: "One hundred hens on every farm, 100 eggs to every hen." A splendid slogan for the Missouri or Illinois farmer who feeds his hens by turning them loose in his grain fields and is thankful for whatever eggs they lay, but one that should be amended for California, where the hen that lays only a hundred eggs a year can hardly show her face in respectable society. The California hen is for the most part a bred-to-lay White Leghorn, and if she cannot lay 150 eggs in a year with feed costing what it does today the sooner she goes to the butcher the better. So let us make our California slogan, "One hundred hens on every farm, 12 dozen eggs to every hen."

Why 100 hens on every farm? First, because the farmer is in a better position than anybody else to produce more poultry and more eggs. The commercial poultryman has been hard hit by the speculation in poultry feeds, and so far the food administration offers him no relief. It may compel him to keep the hens he has, but it cannot compel him to raise more. The backlotter is doing the best he can, but he has no room for growing feed. The fancier is doing well if he holds on to what he has already won. The farmer can raise a good deal of his feed. If he is a grain farmer he already has the feed. If he is an alfalfa farmer, he already has an important part of his flock's ration. If he has only a desert claim, he can raise milo maize and other sorghums and have his patch of alfalfa or barley, or better still, both. Second, because the farmer can raise poultry at greater profit than anyone else. His feed costs less. His land, being used for a variety of crops, can be used for poultry without additional outlay. The poultry manure is of great value in keeping up the fertility of his soil. The birds, when they are allowed to range, do a good deal of cultivating and destroy a good many insects.

Third, because chickens on the farm offer one of the best means of utilizing the energy and interest of the children of the family. Poultry clubs for boys and girls are as yet little in vogue in California, but they are numerous all over the East, and the fashion is headed this way. I would not dare say that all children can be induced to assume the responsibility of caring for a flock of chickens, but many can, and most children, if they are properly encouraged, can be very helpful about the poultry yard.

Fourth, because poultry is only one of many farm crops and can be rotated along with the others, utilizing spare time and waste feed and adding not a little to the family income. Fall with the California farmer is not the slack time it is in the Eastern states, yet there are few farmers who could not if they wished fine the time to hatch a hundred chicks in September or October or to care for them till after Christmas when they bring a good price as roasters. The farmers

of the south coast of Massachusetts did this for years and built up a reputation by doing it.

Fifth, because 100 hens is just a good sized farm flock. Professor Dougherty says there are few farms in California that do not already carry 50 hens. Fifty more would not add greatly to the labor or expense of caring for the flock. One hundred hens in a single house and run can be fed in practically the same time 50 would require. Cleaning is a matter of only a few minutes more. More chicks must be raised to renew the flock from year to year, but if the chicks are bought from a hatchery they can be raised in one flock with less labor than the care of half a dozen mother hens would require.

Sixth, because poultry is on many farms and can be made on most the most profitable crop of all. No other crop is as little dependent on the weather. Frost, rain, wind, drouth, unusual heat, all these come and go, destroying other crops, but the poultry crop goes right along. Oranges may fall; blight take the potatoes; drouth spoil the grain crop; and deciduous fruit be short, but the hens keep right on laying. No other crop will bear the abuse and neglect the poultry crop does, or is so responsive to proper care and attention.

When I use the word "farm" I am thinking of a tract of land of not less than 20 acres. A farm of ten acres is a "ranch"; a farm of five acres is often called a ranch; real estate advertisements often speak euphemistically of one or two acre farms; but I doubt if the words of the above slogan can properly be applied to less than 20 acres. On a fruit ranch or orchard to from five to 20 acres conditions differ considerably from those contemplated by the food administration. Everybody who has any land at all ought to keep a flock of chickens. Let us be perfectly clear about that. But a flock of 25 hens may be enough. All depends on what is raised and how much time the farmer or rancher or his family can devote to poultry. One of the best paying flocks I have visited lately was a flock of nearly 400 hens in the middle of a five acre orange orchard. The owner of this flock, I suspect, makes his hens his main crop and his oranges the side line. This is a fine thing when it can be done, but this man feeds as any poultryman feeds. His hens have no range, and no feed but grain feed is raised between the trees. He is a poultryman rather than a farmer.

The man with a ten acre orchard may find 50 hens all he can care for. Very well, his 50 hens may still produce as many eggs as another man's flock of 100 hens. The fault laid at the door of most orchardists and ranchers is not that they do not keep hens but that they keep such poor hens. "Just chickens," is the phrase that describes the ordinary farm flock. Few farmers, I believe, pay much attention to breeding. They hatch from the whole flock and use any kind of male bird they happen to have. If the resultant pullets are productive, well and good, but it is all a matter of chance. And few farmers devote themselves to one breed exclusively. Doubtless they start with one, but every breed recommended must be sampled, and the flock soon has all the colors of a crazy quilt. If every poultry raiser who reads this would resolutely dispose of all but one breed, then buy a good male bird of the same breed to mate to his hens, he would have a start toward a pure bred flock.

As to breed it matters little. White Leghorns produce most eggs for the amount of feed consumed, but if meat as well as eggs is wanted one of the American breeds or the Orpingtons may give better results. The world was never in greater need of meat than it is now. Every family that can raise a part of its own meat in the form of chickens is doing the country a service and helping just that much in winning the war.

# Gas 'em!

Kill off the whole crew of crop destroyers—squirrels, gophers, prairie dogs, etc.

Gas 'em with Carbon Bisulphide quickly, easily and economically.

One burrow of squirrels will destroy more grain than your family can save in fifty wheatless days. Remember—these ground pests cost the farmers of the Pacific Coast more than \$6,000,000 last summer. So be forehanded—be truly patriotic—conserve the seed in your fields.

The University of California says: "From November until the end of February (the rainy season in California) the best way to attack the ground squirrels is to fill their burrows with gas from Carbon Bisulphide."

So too in other states! If the ground is full of moisture, whatever the month may be, Carbon Bisulphide is the best killer of squirrels, prairie dogs, gophers, etc.

A squirrel killed before March is worth a dozen killed later. Because—most young squirrels are born late in March or early in April. So go the old squirrels now. Write today for prices and interesting folder telling how Carbon Bisulphide—the profit-saver—works.

**WHEELER, REYNOLDS & STAUFFER**

San Francisco, California

## Use CARBON BISULPHIDE

### USE THE WESTERN PULVERIZER, PACKER AND MULCHER

for preparing your seed bed, will increase your crops 25% whether you raise wheat, barley, sugar beets, beans, potatoes, alfalfa or any other crop. A perfect, well pulverized and firm seed bed is as important for one crop as for another. The Western Pulverizer and packs as deep as plowed and leaves a loose mulch on top to protect the moisture; saves 1-3 of expensive seed and time, labor and horse power in preparing a seed bed. It is especially adapted for breaking crust and cultivating winter wheat in the spring, or for breaking crust on sugar beets or beans either before or after they are up without injury to the plants. MADE IN 12 SIZES, FOR HORSES OR TRACTOR USE, IN 1 AND 3 SECTIONS.

1918 crop will bring war prices; make it a record breaker in also by using the Western. Send for our free illustrated catalog, giving full description of the machine and its work, also dealer's name and much other valuable information. Western Land Roller Co., Box 323 Hastings, Neb.

## Insect Enemies of the Home Vegetable Garden

By F. H. Chittenden in Charge of Truck Crop Insect Investigations, Bureau of Entomology, U. S. D. A.

From the time the seeds of the garden crops are put into the ground until the time the crops are harvested, a succession of insect enemies may appear, each of which must be fought by the methods that experience has shown to work best in the particular case.

Insects are classified into (1) chewing or biting forms which devour the leaves and other portions of plants; and (2) sucking forms, which injure and destroy plants by draining their vital life juices. For the first class, arsenicals are the best remedies; for the second class, contact poisons are used.

Gardeners should learn to know the insects which are useful in destroying injurious insects. Prominent among these is the convergent ladybird. It destroys not only all forms of garden plant-lice but the eggs of various insects. Other beneficial insects are wasps, ichneumon and chalcids (minute wasplike insects), ground beetles, soldier bugs (syrphus flies, tachina flies, and lace-wing flies. Were it not for the natural enemies of cabbage worms, army worms, and similar pests, all vegetable crops probably would be failures.

The gardener who starts with a clean soil may do much to keep insects out, and thus save the trouble and cost of applying sprays. Prevention is better than cure, especially in the home garden, where usually the same ground must be planted on year after year. Some of the worst garden troubles are brought in on the roots of plants and remain in the soil to

attack the next crop. So in buying plants of any kind one should be sure that they are free from insects. The roots should be clean and fibrous, not swollen or knotted.

In harvesting fruits and vegetables that are to be stored handle with the greatest care to avoid bruising. Certain insects such as the potato tuber moth gain access at points where the natural protective covering is broken.

Neatness, cleanliness and order in the garden help in the fight against insects. As a general rule, the residue of the garden such as corn stalks, potato tops, etc., are to be turned under to improve the soil. Do this promptly, so that insects may not be harbored by the rubbish. Weeds in the garden and around it harbor insects, particularly if the weeds are related to the cultivated plants. Plant lice, red spiders, and other insects invade the garden from neighboring weed borders. Cabbage pests live on wild mustard, shepherd's purse and related weeds. Just as soon as any crop is gathered, spade up the ground, bury the old remains deeply and plant something else. Except in the extreme North, rye or oats can be sown to give winter cover.

Farmers have found that by rotating their crops they reduce the injury from insects and also increase the fertility of the soil. This principle applies to the home garden, where, if possible, it would be better to make a new plan each year, placing each vegetable where some other grew the year before—peas on the old tomato ground, beets and carrots after the corn, etc.

## Why English Bread is Cheap

Some are still asking why bread is cheaper in England than in America. In England a four pound loaf of war-bread sells for 18 cents, a two pound loaf for nine cents and a pound loaf for five cents. These low prices are maintained in England in spite of the fact that the wheat must risk the submarine zone.

The explanation is simple. English bread is heavily subsidized. It is cheap to the people but costly to the government. In Great Britain the government controls all the home grown grain and imported wheat. This is sold to the mills at a price that, under rigid control, puts a cheap loaf on every man's table. England's cheap

bread, however, costs the government \$200,000,000 annually.

Another reason why the Englishman pays less lies in the quality of the bread. In Great Britain a much higher per cent of flour is extracted from the wheat than even the new regulations require in America. A substitution of 20 per cent of other cereals or potatoes is compulsory in bread making and 50 per cent is allowed.

The high per cent of substitution and government controlled prices explain cheap English bread. The yearly deficit of \$200,000,000 on English bread production is paid by the government, but comes out of the people's pockets eventually in the form of general taxation.

## State Bulletins

The University of California publications are being mailed by the experiment station. They are free to Californians. Write the station at Berkeley for them. Bulletin 286, "Commercial Fertilizer," by P. L. Hibbard, gives list of fertilizer dealers of California with analysis of various brands of fertilizer. Circular No. 184, "A Flock of Sheep on the Farm," by R. F. Miller, is preaching the same sermon which the Cultivator has been endeavoring to preach for some time, "Save some of the farm wastes by keeping a flock of sheep." Dr. Thomas Forsyth Hunt is author of No. 187, "Utilizing the Sorghums." Dr. Hunt refers to the great value of the sorghum grains as stock and poultry feeds

and refers to these valuable grains as a wonderful help in increasing livestock production in this state, and we want to add that after eating some exceptionally fine Milo muffins, that Dr. Hunt might well have added that the sorghums may be a great factor as a human food.

California is securing a respectable showing of pure bred Guernseys. There were in 1917, 1930 registered animals of this breed in the state; 478 bulls and 1452 females. The total for the United States is something over 48,000. Wisconsin is the biggest Guernsey state, of course, with New York and Pennsylvania coming in second. There are nearly 23,000,000 pure bred cattle in the United States of all breeds.

## Good Plowing

is necessary for good crops, and good plowing is largely dependent on the plow you use.

Moline plows have long been famous for the good quality of their work. In addition they have many improvements which add to their convenience, durability and light draft. No matter what your plowing requirements or the type of your soil there is a Moline plow made for you.

Moline No. 66 Sulky

Built especially for the hardest kind of usage and deep plowing. Will turn a furrow 11 inches deep. Frame, wheels, axles and beam are extra heavy and substantial. Guiding lever controls the hitch so that the plow can be held to the proper amount of land through varying soil conditions. Dial hitch gives a wide range of adjustment and permits use of a strung out hitch.

Furnished with either 12, 14 or 16-inch bottoms.

Moline Orchard Gang

A convenient and practical plow for orchard work which does especially good work in trashy ground. Levers are lowered instead of raised to lower bottoms. All levers are low and out of the way for working under branches. Hitch is controlled by a lever so that furrow can be thrown against or away from the trees without danger of injuring them. Furnished in 2 or 3-bottom sizes. Third beam can be detached.

Moline Jumbo Good Enough Sulky and Gang

A massive and unusually heavy plow capable of turning a furrow from 16 to 20 inches deep. Just the plow for preparing a deep seed bed in hard soil. Convertible from a sulky to a gang. Levers are long and powerful to make operation easy. Hitch is the swinging clevis dial type and is controlled by a lever.

Moline Power Lift Gang

Fits any size of tractor. Power lift is so arranged that bottom can be raised entirely or any intermediate distance by simply pulling a cord—desirable feature in difficult plowing. Very strongly constructed for hard usage. Thoroughly turns soil and covers trash. Made in 2, 3, 4 or 5-bottom sizes. Equipped with either Moline chilled bases or steel bottoms.

Your Moline dealer will be glad to show you these plows. If there is no Moline dealer in your locality, write us for further information.

## QUESTIONS AND ANSWERS

Continued from Page 233

to mix one pound of water glass to five quarts of water and I followed directions.—Subscriber, Whittier.

The water glass solution was not too weak. One part water glass to ten or even more of water is the reg-

mixed in before it is entirely cold. My experience is that eggs do not keep as well in glass, even when the solution is properly mixed, as they do in a wood or an earthen crock.—J. A. K.

## CAULIFLOWER PROFITABLE

Continued from Page 227

Vegetable Growers' Exchange, there

so very unfavorable that less than half that number of cars will be handled. From the Compton district there will be shipped this season over 1000 carloads.

To watch the handling of this crop through a modern packing house is indeed most interesting. The new packing house operated by the exchange has been in use since December 15, though not yet completed. It is managed by Fred R. Bright. The

house is 50 by 240 feet, most of it two stories in height. The shoo for the crates are slid down the chute from the cars where they are caught by carriers and taken in bundles to the second floor. They are automatically dropped on an endless belt carrier running nearly the entire length of the building, and the laborers take them from this long carrier and stack as near to the crate making machine as possible. The stacks are not plac-

Crated on Place and Trucked to Car

Mr. Yingling does his own packing and is shown in the photo with book checking the crates as loaded. Nelson Ward stands with hands behind him, near the truck.

Harvesting Cauliflower

On the ranch of A. C. Yingling near Compton. The wagon has specially constructed axle bent at right angles just inside of hub of wheel and raised several inches above that of the normal wagon. Some places in the field the cauliflower stands between three and four feet high, and this elevation is necessary to save injury. Mr. Yingling is shown at extreme left.

ular proportion. But it should all have the jelly-like consistency which only part of yours had. Probably you did not mix it thoroughly. The water should be boiled and the water glass

are members controlling over 1700 acres. These 1700 acres could produce from 1500 to 1700 cars in good years. Unfortunately, this year of drouth and dry atmospheric conditions has been

ed directly upon the floor, but on stands with bottom a few inches above the floor. When a stack six or seven feet high is wanted, close to the nailing machine, a small four-wheeled steel truck is run underneath and with lever it is extended or-lifted until it raises the entire stack of shoo, and instantly the operator walks away with the loaded truck.

Owing to the manner of making complete crates are not turned out by the nailing machine, but the ends are, and but little hand work is necessary to complete the crates which are passed in long chutes down to the packing room.

The packing room covers the entire ground floor of the 50 by 240 feet. As the cauliflower is delivered at the door, sometimes in big trucks with trailer attached, it is tossed from the wagon to the endless carrier, along each side of which the packers sort into two grades, or sometimes, where the grade of the entire load is not the highest, it is given a "field run" grade. Besides this field run grade and the fancy and choice, there are the culls packed in casks with salt to be used later for pickles.

The crates are expected to hold about one dozen head. Some heads, however, are of such size that only a half dozen can be placed in one crate. It takes 536 to 550 crates to fill a car, and they bring the grower anywhere from 40 cents to 80 cents per crate, according to quality.

But a word about the farming or growing end. A. C. Yingling who is growing 36½ acres this year and is doing some special work on seed production, told us that the first seed he planted cost him \$75 per pound. This is not quite so serious as it appeared at first, for one pound will grow plants sufficient for four acres. The \$75 price no longer obtains, for \$40 is now the highest expected, and some sell as low as \$10 per pound. The seed is planted around July 1. After a few weeks in seed bed the little plants are lifted and planted in rows 30 to 36 inches apart, about 7000 plants per acre. Intensive culture is demanded. In a season such as the past has been thorough and deep irrigation about every nine days is essential.

The season which began in December will continue for several weeks, and it is now anticipated that the moister weather of the past few days will greatly increase the output in quality and quantity. Compton is proud of her cauliflower industry. It is little more than four years old, and Nelson Ward, one of the most persistent boosters for Compton, a pioneer who has spent nearly a half century there, insists that Compton and that portion of Los Angeles County is showing the world one of the finest agricultural products it has yet produced.

# YUBA

1. "Yuba Superiority" began with the purchase of the right materials; chrome, chrome-nickel, and manganese steels.
2. The design by practical engineers, proved by 4 years of practical demonstration in actual field work.
3. Precision in workmanship; mechanical perfection in the highest degree.
4. Severest tests by experts.
5. Usage, day and night, on hundreds of farms, under varying conditions of soil and climate.
6. No record of a dissatisfied owner.

SURGICAL DRESSINGS FOR THE RED CROSS. FOUR BY EIGHT'S

Written for California Cultivator  
By Ida M. Blake

You take a piece of gauze, they say,  
And make it four by eight,  
Keep your selvedge just this way,  
Then fold it so; but wait,

You see those threads all loose around?  
You must not leave them so,  
For if they get within the wound,  
The "Sam" to heaven might go.

Now find the center, pretty near,  
And fold it nice and flat.  
Now fold again this way, you hear?  
Then take your knife and pat.

Don't leave your corners sticking out,  
Or roll the selvedge o'er.  
Don't lose your patience, neither pout,  
Remember what it's for.

THE WHITE CROW

By Jean Hickenlooper, in Youth's Companion

OME," said the family cat to Beth one day, "I will tell you a tale that my grandfather once told to me."

So Beth sat down in a shady nook by the garden wall and listened attentively.

"Once upon a time there were six black crows and one white crow. The white crow longed to be black because the others laughed at him. 'I will go to Grandfather Owl,' he said, 'for he is very wise. I will ask him how I can become black.'

"So he flew to the Owl Castle, but Grandfather Owl was asleep. The white crow sat down to wait, and at last, when the stars began to twinkle, Grandfather Owl awoke, put on his spectacles, and looked out.

"Good evening, Grandfather Owl!" said the white crow. "Will you please tell me how I can become black?"

"Who? Who? You are already wearing a very handsome coat," said Grandfather Owl.

"But my brothers and sisters and cousins and neighbors all laugh at me," replied the crow, "and that is why I long to be as black as they."

"Oho! Oho!" said Grandfather Owl. "I see. You are afraid of being laughed at. That's a very foolish reason for changing your clothes, in my opinion; but if you wish it, certainly I can tell you how to blacken your suit. Do you see the smoke coming from yonder house? Go sit on the top of the chimney and your wish will come true."

"Joyfully the white crow did as he was told, but very soon he hurried back to Grandfather Owl. 'O grandfather!' he cried, 'the chimney was so hot it burned my feet.'

"No good things can be got without trouble," replied the wise owl.

"But, pleaded the crow, 'is there no other way in which I can become black?'

"Oh, yes, there are other ways, if you are brave enough to try them," replied Grandfather Owl. "Take my advice, and go to the man in yonder town who is painting a house black. He may be hard to find, but you will be rewarded if you search well."

"So, thanking the owl, the crow again hurried away, and soon found the painter. Not waiting, in his joy, to look at the paint, he plunged into the bucket. There he flopped about and cried, 'Help! Help!'

"The painter dragged him out. 'Ho, ho! A red crow!' he cried, and tossed him into the air.

"Whatever shall I do?" wailed the crow. Then away he flew to Grandfather Owl. 'Grandfather,' he whispered, 'I have made a dreadful mistake! Oh, what shall I do?'

"Grandfather Owl looked sadly upon him. 'Look before you leap,' he said. 'Go to a store and pick out a bottle of black ink.'

"Away flew the crow, and dashing into a bookstore, he seized the first bottle he saw. In great glee he carried it to a stone and broke it above him. How spattered and happy he was, for he believed himself to be black at last!

"Just then some saucy sparrows flew by. 'Oh, see!' they cried. 'A parrot! A red and green parrot! Where did he come from?'

"Then the crow knew that he had made another mistake, and in sorrow hastened to Grandfather Owl. 'What shall I do?' he wailed again; but Grandfather Owl had lost patience with him, and sternly replied, 'Go pull all your feathers out, raise a new crop, and be content.' But the poor crow wept, until at last Grandfather Owl took pity upon him, and said, 'I have one remedy left. If you fail to obey my orders this time, you must ever remain a disgraced crow. Go at once and bathe in the creek. Wash off as much as you can of those colors; then, while your plumage is still wet, fly far to the east where the people have emptied soot from their stovepipes. Roll in it well, and you will have your heart's desire.'

"So the crow did as he was bidden, and behold! to his great joy he was indeed a crow of shining black feathers. All the other crows flocked about him to admire his wonderful new coat. They placed a crown upon his head—for was not anyone worthy to be king who had power to change his plumage?

"But alas for the power of owls and crows! One day a playful April shower caught him and washed him as white as snow.

"Oh, what shall I do? What shall I do?" cried the king, and hurried to Grandfather Owl.

"Do?" said the owl. "Do nothing. Know you not that you are the king? Kings should always be white."

"So the king flew back to his kingdom, where his subjects awaited him.

"A king," said he, "should always be white." And the others, bowing their heads, believed; for was he not their king?"

The family cat paused and looked at Beth.

"Dear Family Cat," said Beth, "that was a good story. Won't you tell me some day why your grandfather saved the robin?"

"I will," said the cat. "Yes, yes, I will tell you some day, but not now. I must now attend the Cat Culture meeting on the back fence."

LINOLEUM FOR THE KITCHEN TABLE

Instead of buying more oil cloth for the kitchen work table after the old is worn out, buy a neat blue and white, or green and white linoleum, preferably inlaid, and tack it on with small tacks at the edge. It will lie flat soon without any fastening if preferred. It is better looking, easier to keep clean, lasts ten times as long and is preferable in every way to table oil cloth.

TESTS OF OVEN

Slip a small piece of white paper in the oven; if the paper becomes a yellowish brown in three minutes it is hot enough to bake baking powder or soda biscuits. This is called a hot oven.

If paper turns a yellowish brown in seven minutes, the oven is called moderate, which gives the right heat for baking cake in which butter is used.

If it turns yellowish brown in ten minutes, you have the right heat to bake a sponge cake or a loaf of light-bread, for baked custard or omelet.

## Paint that goes farthest and endures longest

**T**HE Sherwin-Williams business has been built upon the sound principle that a paint or varnish best serves its purpose when made for a particular purpose. To that end our specialists have studied surfaces, the wear they get and the use they serve, and made a special finish for each.

It is this specializing that guarantees greater durability in every Sherwin-Williams finish you buy.

Protect your house, barns, cribs, fences and implements with these high-grade enduring finishes. Your dealer can supply you.

### Spray with Sherwin-Williams Arsenate of Lead AND Dry Lime Sulfur *in powdered form*

They quickly destroy all leaf-eating and chewing insects without injury to the foliage. Being powder, they cannot deteriorate or freeze, if carried over the winter. When mixed with water, they form a per-

fect solution that stays mixed, spreads evenly and thoroughly and sticks fast. We gladly send to farmers our painting booklet, "The ABC of Home Painting" and authoritative spraying literature.

Address, The SHERWIN-WILLIAMS CO., 716 Canal Road, N. W., Cleveland, Ohio

### WORKING CLOTHES

Written for California Cultivator  
By Anna Lenington Heath, Pomona

I read Mrs. Pickett's article on "My Ideal Farmer's Home" in the Cultivator for January 26 with much interest and was glad she suggested "Working Clothes" as a subject to be discussed for they are duds dear to my heart. I am assuming that she means clothes for the rancher's wife and daughters to wear about their housework. The men have had their shirts and overalls so long that they are taken for granted and of course such garments are indispensable to the woman who does a man's work outdoors.

For ordinary housework the clothes of the ranch woman should be of an attractive and durable material that will stand repeated washing, cut in a style easy to make, comfortable to wear and simple to get on and off. The justly celebrated bungalow apron can be made to meet all these requirements. The fashion books show many pretty and practical designs. The ones that pull on over the head are especially easy to make. For the woman who does not like this apron there are numerous simple and attractive house dresses.

Whatever the style chosen, have good big pockets, short sleeves and an open, comfortable neck. And cut the skirt short. How many remember the long, slinky wrappers we used to wear, with the long sleeves and high collar that usually was too tight after the first washing, and how drab the bottom of the skirt got every morning when we went out to care for the chickens!

Percalé is a good summer weight material, but it fades some and does not wear any too well. Gingham is good if shrunk before being made up. The most satisfactory cloth I have found is cotton cheviot. Our mothers called it shirting. It can be bought for 20 cents a yard and launders beautifully. Kiddie cloth and Devonshire are both good but cost more.

An apron or house dress made of any one of these materials and worn with a combination undergarment, light weight petticoat and low-heeled shoes, forms a working rig that surely makes the tasks easier. It is so easy to get on and off that there is no excuse for doing house work in one's better clothes.

Have working clothes for each of the girls and insist that they be worn. It is a very practical way to save the school and Sunday garments and is good training in the eternal fitness of things. For the dirtier work it is well to have slip-on aprons of gingham. Make them to hang straight from the shoulder as very little girl's aprons do. Used judiciously they will keep the house dress fresh a long time and can be removed instantly when occasion demands.

A frayed, spotted dress that used to be "best" is a very unattractive thing to work in and suggests slack and untidy methods. Working clothes, made for the purpose, are inspiring and conducive to the right way of doing things.

### PRIZE WINNERS

The first prize of \$2.00 cash for best article goes to Anna Lenington Heath of Pomona for "Working Clothes;" the second of \$1.00 to C. Z. P. for "Just Home." Others whose articles are published in this and later issues will be given extension of subscription to the California Cultivator.

Try cakes that call for honey or syrup instead of sugar.

### ENJOYING LIFE WITHOUT WHITE FLOUR

Written for California Cultivator

Here is a record of what one Arizona woman has done to feed her family happily on other things than wheat flour. By the way, do you know how much better pie crust is made from whole wheat than from white flour? Try it and see.

"By the use of cornmeal, oatmeal, rye and milo meal she has made a saving in wheat. A 48-pound sack of wheat bought December 29, was half used on February 3. She had been using no other wheat flour during these 35 days. Her family consists of three people, with a fourth at breakfast and occasional dinners. She has had a number of guests at dinners and has given away many biscuits and a number of yeast, wheat and corn loaves by way of propaganda. She has ground her own milo in a coffee mill. When the 50-50 flour law created consternation here she put an exhibit in the window of a leading grocery store. It consisted of a coffee mill, "chicken feed" (milo meal), a loaf of the milo maize bread, and one of the corn and wheat bread. With this were recipes for the bread and milo biscuits. The exhibit has had a good deal of attention."

Rice flour has possibilities of much good eating in combination with small quantities of white flour—if you greatly desire whiteness—or with milo meal, whole wheat, or other of the darker flours or meals. Delicious—and perfectly white—muffins can be made with rice flour two-thirds, white flour one-third. Also the rice flour may be used straight.

Queer, isn't it, how we hug the beaten paths? I never had rice flour in the house until last week—simply because it hadn't come to my attention; now I am enthusiastically experimenting with combinations and substitutions. I'm going to order some barley flour today and experiment with that. The experiments are all good eating too.

Let's help each other out by reporting in the Cultivator the new things we discover.

For one, I should like to have directions for making pumpernickel. I understand it is made of rye and other dark flours only, with no white wheat flour. Will someone please tell me how?

### MORE SANDWICHES

Mrs. C. L. Gardner, San Francisco

Take a canned pimiento, wash and wipe dry. Then chop fine with the meat of six or eight walnuts, moisten with mayonnaise, and put between thin slices of brown bread. Add salt to taste to the mixture.

One-half cup of seeded raisins, chopped fine. Add to them peanut butter which has been made into the consistency of thick cream by the addition of water. Salt the peanut butter to taste. Spread on thin slices of white or brown bread. This is also very good on graham crackers.

Mrs. L. J. Benton, Napa

One cup well cooked beans (preferably brown). Mash with two hard boiled eggs, season with salt, lemon juice and salad oil to suit taste, pepper and a trace of onion if liked. Spread between thin slices of bread and butter.

Another: One or more hard boiled eggs; mash and season with lemon juice, salad oil and salt or mayonnaise, with lettuce leaf and buttered bread.

Mrs. H. C. Wallace, Shafter

One-quarter pound seedless raisins,

one-quarter pound dates, one-quarter pound dried prunes (pitted), one-quarter pound dried figs, one-quarter pound any kind nuts. Put all through the food chopper, then pour over it the juice of a tart orange, mix well and pack in a bowl. This will keep and makes delicious sandwiches spread on whole wheat bread with no butter.

Another—One small can deviled meat, one hard boiled egg (chopped), one teaspoon prepared mustard, one tablespoon cream. Mix well and spread on bread, preferably rye bread.

For the mustard used in sandwiches make as follows: Three tablespoons mustard (dry), one tablespoon sugar, one teaspoon salt, one teaspoon corn starch. Mix the above and add one egg and one cup vinegar then cook slowly until thickened and when cool add one teaspoon Wesson salad oil or olive oil. This will keep and make enough for many sandwiches.

#### JUST HOME

Written for California Cultivator  
By C. Z. P.

Home should be a place of happiness. Nothing short of death or serious illness should keep the entire family from being cheerful.

I try to have a funny story or something interesting that happens out in the farm yard, to tell my little family at meal time.

The table is not a place to settle family difficulties, but a very easy habit to form as it is a family meeting place with a few minutes (between bites) to take Son John or Daughter Sue to task for things they have either "overdone" or "underdone."

Boys and girls on the farm do not have the opportunity for social intercourse that city children have, so each birthday my children know they are at liberty to invite all their friends in for a good time, their father and I joining in the games and fun.

Then every third Friday night the neighborhood children meet at our house to play games.

My motto is "Make home life happy," and the children will stay on the farm.

#### LET'S EAT MILO

Written for California Cultivator  
By M. Jackson

By experimenting, I find milo maize to be a nutritious, wholesome and appetizing food when properly prepared. The following are some good milo recipes, and I wish to pass them on for the benefit of others:

##### Milo Mush

Soak two cups of milo and one heaping teaspoon of baking soda over night with sufficient water to cover. Drain and rinse thoroughly. Cook with water to cover for 30 minutes, then drain off, return to stove and cover with boiling water and cook in large kettle for seven hours. When almost done, remove cover from kettle and let steam evaporate until dry. Add a little salt and serve with rich milk.

##### Milo Pudding

Prepare milo as in preceding recipe. To 1½ cups cooked milo add 2½ cups milk, two-thirds cup of Sultana raisins (scalded until soft), three well beaten eggs and one-half cup honey. Flavor with cinnamon. Mix ingredients the same as for rice pudding. Bake slowly until done. Serve with cream. Sugar may be used instead of honey, but honey is better. This is certainly delicious.

##### Fried Milo

Left over milo may be fried in butter or pork drippings until a light brown and served for breakfast.

#### OUR "CORN FLAKE LIBRARY"

Written for California Cultivator  
By Mrs. A. C. Pickett, Riverside

I want to tell of my husband's Corn-flake Library," as we jokingly call it. Open the doors of a closed cupboard in our library and behold four shelves of corn flake boxes, labeled and arranged alphabetically, like cyclopedias. These contain government bulletins, seed catalogues, etc.

At the citrus experiment station they had pasteboard boxes made to order, for this purpose. They are rather expensive to buy and too troublesome to make. The corn flake boxes are just the right size. If you are not addicted to corn flakes, ask your friends who use them to save the boxes for you. In a moment one can find the information needed, without hunting through piles of pamphlets. Our newspaper clippings are filed in large sized envelopes labeled and placed alphabetically in the corn flake box marked "Scraps." When my husband reads the agricultural papers he marks articles he wishes saved. When the family has finished reading the papers, he cuts out and files the items. I do the same with articles of interest to me. Many people fail to make use of the helps offered by the government, to be had for the asking. Of course the initial cost of all this printed matter, prepared by experts in every line, is paid from taxes, so if not used the farmer is the loser.

#### STEAMED BREAD WITH NO WHITE FLOUR

By Mrs. G. C. Halsey, Dinuba

Two cups sour milk, two cups corn meal, two cups rye flour, one cup raisins (if desired), one-half cup molasses, two level teaspoons soda, one level teaspoon salt. Put in tight can well greased. Set in hot water and let boil 1½ hours.

##### School Sandwiches

Cut slices of steamed brown bread, spread with thin spreading of peanut butter and then a thin spreading of tart jam.

#### A GOOD SUBSTITUTE FOR MEAT

One cup flour, one cup tomatoes, one cup beans of any kind, pink preferred, half cup peanut butter, one cup cereal coffee.

Parch flour in oven to a nice brown, rub tomatoes and beans through colander, cream all these ingredients thoroughly, salt to taste. Put in a baking powder can and boil in double boiler from one to two hours. This can be done when cooking beans by setting can in beans.

This recipe can be varied in many ways, adding a little onion or slicing and frying, just as you like. We like it sliced when cold just as it comes from can. — Mrs. Joseph Harman, Hinkley.

#### GYMNASIUM KNITTING

Grandma, when she used to knit, Didn't work her arms a bit, Waving them like dumb-bells swingers Seemed to do it with her fingers; Didn't take up half a room, Using needles like a broom. Though she loved a rocking chair She could knit most anywhere, And no matter how she'd ply, Never poked you in the eye; But, oh lor' and goodness gracious, In these days so far less spacious, When the modern knitting girl Sits her down a sock to purl, Both her elbows start to swirl; Every time the needle jibs Pokes her neighbor in the ribs Wonder if such stunts she tries For gymnasium exercise. Thinks, perhaps, it's more exciting To behave as if reciting. Girls, oh girls, we mean no harm, If you'd weave a greater charm, Work the wrist and not the arm; Grandma, when she used to knit, Didn't wave her arms a bit.

## First Aide to Hostesses Who Know

PERHAPS it's only a couple of friends who drop in for a little chat. Or—it may be a knitting party, an Aid Society meeting or what not. Or—who knows?—perhaps it's a big "party"—music and dancing and Japanese lanterns and all that.

In any event, don't overlook the help Ghirardelli's can give you. Whether it's two cups for yourself—or two gallons for your "big affair"—you can make it just as easily.

Just one reason why Ghirardelli's has always been first aide to hostesses who know.

In ½ lb., 1 lb. and 3 lb. cans; a  
tablespoonful—one cent's worth—  
makes a cup.

D. GHIRARDELLI CO.

Since 1852

San Francisco

## When You Buy a Piano it Pays to Buy a Good One

When you buy a Piano it is usually intended to last a life time. Therefore special care should be used in its selection.

You should not be guided by cheap prices or special inducements. Pianos, like everything else are priced according to their intrinsic worth. If you do not possess expert knowledge of piano making you must rely greatly on the Piano Dealer. Therefore it is certainly to your interest to go to a dealer who has the reputation of carrying only pianos of merit and true musical worth, who is known to price his pianos consistently, and who has only one price for everybody.

We carry a number of well known makes, each the very best in their grade. Prices of new pianos range from \$300 upward; good "used" pianos from \$125 upward. If desired, we arrange convenient terms of payment.

We invite you to call at any of our stores—or write us asking for illustrated catalogues and prices.

We are dealers in Steinway and other Pianos, Pianola Pianos, Aeolian Player Pianos, etc.

RICE

The United States food administration has fixed maximum prices on California rice as follows: Rough rice, lb., 3.9 to 4c; clean rice, lb., 6.9 to 7c.

HAY

Under date of February 16, Scott, Magner & Miller says: Receipts past week, 862 tons. The market has dragged and toward the end of the week concessions in price have been made to effect sales in order to remove arrivals promptly from the track. The demand for shipment to the southern counties is good and considerable hay and straw have been moved to these sections to keep cattle alive. How much more will be taken is a problem that the weather conditions will probably decide. In the districts where rains have fallen many offerings of hay from farmers' barns are being made. This in itself is increasing the visible supply of hay materially. At the same time in a great many sections more rain is positively needed to mature crops and it is to be hoped that the same will be soon forthcoming.

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the hay market. For prices to consumers charges of cartage, commission and handling must be added according to conditions. Fancy Wheat Hay, (light 5 wire bale) 29.00@30.00 No. 1 Wheat or Wheat and Oat Hay 27.00@29.00 No. 2 Wheat or Wheat and Oat Hay 25.00@27.00 Choice Tame Oat Hay 28.00@29.00 Other Tame Oat Hay 25.00@27.00 Wild Oat Hay 24.00@27.00 Barley Hay 25.00@27.00 Alfalfa 25.00@27.00

Stock Hay 20.00@22.00 No. 1 Barley Straw 60@90

GRAIN

Grain Exchange prices, etc. Corn, Cal. Yellow, cwt. 3.50@3.75 W. Egyptian 3.70@3.80 Brown Egyptian 3.55@3.60 Barley, Feed and Brewing, cwt 3.55@3.60 Milo 3.55@3.60 Oats, Red Seed 3.60@3.70 Feed 3.35@3.50 New Black 3.25@3.50 Rye, Utah 4.00@4.25 Wheat — Government prices: Common white hard, base price is \$3.50 per central, or \$2.10 per bushel of 60 pounds delivered in terminal warehouses in bulk; soft wheat, base price 2 cents per bushel less, or \$2.08 per bushel; white club (including Sonora), \$2.06 per bushel. If wheat, after cleaning, weighs 60 pounds or more to bushel, base price stands; if 58 to 60 pounds to bushel, 3 cents per bushel reduction; if 56 to 58 pounds, 6 cents per bushel less; if less than 56 pounds, grain becomes sample grade and sells on its merits up to within 1 cent per bushel of 56-lb. wheat. Sacked wheat 4 cents per bushel more, less tare for weight of sacks.

FEEDSTUFFS

These prices applicable to San Francisco, with \$1.00 less at Sacramento and Stockton, are for cash at the mill in carload lots, and include sackage, with an additional rate of 50 cents per ton in less than carload lots. Wholesale prices per ton. Prices fixed by food administration as San Francisco price; Sacramento and Stockton \$1.00 less on carlots at mill door: Bran 34.00@35.00 Middlings 41.50@42.50 Mixed Feed 37.00@38.00 Shorts 35.00@36.00 Rolled Barley 72.00@74.00

Citrus Fruit Market

Los Angeles, Feb. 20, 1918.

While total shipments are running far less than last year, war prices are prevailing, and, as may be seen by the auction quotations, few sales are made but will bring handsome profits to the producer. A few storage Valencia are still offered but do not meet the reception given to Navel which are of very high quality and every offering immediately taken. Fruits injured by freezing in transit have been almost entirely cleared from the market. Florida's shipments are also much lower than last year. Lemon shipments are lighter than anticipated, but prices are entirely satisfactory.

Shipments

Shipments of oranges from Southern California to date since November 1, 1918: 3931 cars; lemons, 937; total, 4868. To same date last season: oranges, 7756; lemons, 1622; total, 9378. From Central California to date this season: Oranges, 1891; lemons, 105; total, 1996. Same date last season: Oranges, 4014; lemons, 152; total, 4166. From Northern California to date: Oranges, 202; last season, 842.

MARKET NOTES

Canners are offering up to as high as \$15 per ton for tomatoes, and several contracts have been made on that basis. Last year's price was around \$10; the previous year's, \$7.50-\$8.00. This increase is due to getting together of producers in Santa Clara Valley, Southern California and Sacramento Valley.

There has been a big slump in egg prices in Eastern markets as well as on the Coast. Consumption has been steadily decreasing for the past six months owing to high prices and now large receipts further depress prices.

Bean growers are somewhat encouraged over rise in prices; Limas now selling at 14 cents per pound, and Pinks at 9 cents.

Handlers of dairy products have started a campaign of education as to value of cold stored goods, assessing eggs stored one-half cent per case; butter, 1 cent per 100 pounds for a publicity fund.

Imperial Valley peas were injured by another frost and other complications have operated to reduce expected shipments to 50 per cent of a normal yield. Small shipments are now starting.

The condition of truck crops is estimated as follows: Cabbage 73, carrots 88, cauliflower 75, celery 77, tomatoes 81, lettuce 64, onions 88, peas 70, spinach 84, strawberries 88, turnips 83.

In Central California light rains have benefited artichokes and broccoli, which are now shipping, and the growing crop of young pea vines, but rainfall is still extremely short. The condition of truck crops for Central California is estimated as follows: Artichokes 85, broccoli 67, cabbage 81, peas 80, spinach 87, strawberries 87.

The government has placed an embargo on shipment of any white beans from California until investigation has been made as to amount now held in the state. It is assumed that requisition will be made for the needs of the government before the embargo is lifted.

Rice growers have been asked by the government to take four cents for rough rice. The growers are not satisfied.

Postcard reports to the Los Angeles office of the bureau of markets of the United States department of agriculture show shipments from California for the week ending February 16 approximately as follows: Apples, 1 car; dried apples, 10; cauliflower, 155; celery, 74; mixed vegetables, 72; beans, 58; artichokes, 2; cabbage, 26; dried apricots, 3; dried peaches, 18; dried pears, 3; prunes, 2; dried plums, 29; lettuce, 82; potatoes, 118; raisins, 38; turnips, 13; mixed fruits and vegetables, 7; carrots, 3; onions, 10; sweet potatoes, 1.

WHY IT FAILED

A certain chemist advertised a patent concoction labeled: "No more colds! No more coughs! Price 1s. 1 1/2d."

A man who bought the mixture came back in three days to complain that he had drunk it all but was no better.

"Drunk it all!" gasped the chemist. "Why, man, that was an india rubber solution to put on the soles of your boots."—Tit-Bits.

NO ENEMIES

You have no enemies, you say. Alas! my friend the boast is poor; He who has mingled in the fray Of duty, that the brave endure, Must have made foes! If you have none Small is the work that you have done. You've hit no traitor on the hip. You've dashed no cup from perjured lip, You've never turned the wrong to right, You've been a coward in life's fight. —Chas. Mackay.

INCREASING PRODUCTION

The shortage of materials and difficulty in securing experienced labor necessary for building the L. A. Auto Tractor Attachment has caused delayed shipments, of this popular farm necessity, for some little time; but Walter S. Brush of the above manufacturing company reports that they have been able to secure the material necessary to build this attachment in sufficient quantity to supply the increasing demand and from now on will be in a position to make prompt shipments upon receipt of any and all orders.

Mountain Grown White Rose Seed Potatoes

I have a car of clean, smooth, medium sized potatoes; splendid seed, grown at an elevation of 3000 ft. According to tests potatoes grown at mountain elevations will be more vigorous and mature earlier when planted in the valleys, than valley grown potatoes.

## New Record Book for California Producers

The California Cultivator has just published a new and most useful Record and Account Book for California Fruit Growers, Farmers, Live Stock Men, Dairymen, Beet Growers, Poultrymen, and all other California Producers,—something that has long been needed but never before attempted, to suit the peculiar diversity of products of this state.

Among the special pages provided are the following:

"Fruit Crop Record," "Live Stock Record," "Poultry Record," "Daily Record of Labor," "Individual Tree Record," "Dairy Record," "Farm Crop Account," "Live Stock Account," "Household Expenses," "Field Expenses," "Cash Receipts," "Inventory," and others that form a complete, easy-to-keep record system.

There is nothing complicated about this Account Book but it is complete and will be of great value to anyone wishing to know "where the money goes," which crops pay and which do not, who owes you and how much, and many other things to which you may quickly refer.

A copy of the California Cultivator Farm Record and Account Book will be sent to any address prepaid and a year's subscription to California Cultivator, new or renewal will be credited upon receipt of \$1.25. Send all orders to

## GIANT FARM POWDERS

STUMPING — AGRICULTURAL

Western soils, stumps and climate need western explosives. That's why Giant Farm Powders cut the cost of clearing western land. Manufactured for more than half a century especially for the West, they naturally give better results on western farms and orchards.

Giant Farm Powders lead in economy because they go further than ordinary explosives. They break up the stumps thoroughly thereby cutting down labor cost. Money and trouble are saved because of their low freezing qualities.

Warning: If your work is done with any other powder or dynamites, the chances are it will not be done as well as with either of the two Giant brands: Eureka Stumping or Giant Stumping. Look for the Giant trademark on every case, and be sure of the genuine.

How to make the farm pay more money is explained in "Better Farming." This big free book, fully illustrated, will be sent you as soon as we receive this coupon.

## County Annual Assembly of Farm Bureau

Imperial County Annual is Becoming an Event of State-Wide Importance.  
Barbecue and Program with Noted Speakers Draws Large Attendance.

THE most dramatic incident in the Assembly, or the annual of the farm bureau of Imperial County, recently held at Holtville, was when Crocheron made the announcement of the appointment of C. S. Sullivan as farm adviser. Mr. Sul-

livan had formerly received a commission as an officer in the liberty army, for he had felt that duty called him to army service, but hearing the insistent demand for more food for America and its allies he presented the matter to officers of the university and asked for advice. He was urged to come to Imperial Valley in the capacity of acting farm adviser in place

of Paul Dougherty who had gone into active service. This position he has filled several months, and because of his willingness to forego the greater honor and take a lesser salary he was tendered the position of permanent adviser, which he accepted at the time of the afternoon session of the Assembly.

The Assembly never called such an array of talent from other portions of the state. There were representatives of the state university, including Dean Hunt who made his address on "Canada at War."

Frederick Maskew of the state quar-

antine service in San Francisco explained with a series of illustrations the meaning to the Imperial Valley of the introduction of the cotton boll weevil. The service in San Francisco is most energetic in preventing the introduction of pests affecting California horticulture and agriculture. Instead of California agriculture, we might well say, American ag-

riculture, for owing to the importance of this port many articles enter the harbor which give opportunity for introduction of pests affecting agriculture in all of America. To prevent introduction of boll weevil or other pests of cotton this method of treatment is followed: Before it is allowed to be delivered to other sections of the state it is placed in an immense

steel container which is hermetically sealed and the air exhausted. Hydrocyanic acid gas is then generated and introduced into the vacuum, this at eight to ten times the strength which is used in the fumigating of orange trees. This gas is known to penetrate to the center of the largest bales of cotton.

Dean Van Norman of the university farm school had a couple of cows on the stage of one of the theaters, and with these, one a good dairy type, the other, dairy-beef type, he proceeded to show the lines wherein the successful dairy cow was manifest.

Tom Elliott talked of the need of greater and more diversified vegetable production in the Imperial Valley.

Prof. Gilmore of the university talked on cotton culture, with special reference to war demands, and Commissioner Waite discussed culture of the new type of Pima cotton.

The women's section of the Assembly was at the Holtville high school; the cotton section at the city hall; and the "regular morning session" was in the Arcade Theater.

Perhaps it is not our province to criticize, but we cannot refrain from expressing the belief that more complete interest in the proceedings could be secured by extending the time of the meeting and asking all to attend one general assembly. In fact, the afternoon session did follow this plan. All gathered at the high school. It was at this session that Prof. Crocheron introduced the new farm adviser and Dean Hunt made his address.

Prof. True arrived after all had

made appeal to the members of the farm bureau to stand by the new farm adviser, for he will never succeed unless he has the fullest cooperation on the part of the membership. He finished with an appeal for new members. The programs, as provided, had blank for filling in, and a campaign was made for a greatly increased membership.

### CANADA'S PROBLEM

From the address delivered by Dean Forsyth Hunt, "Canada at War," we take the following regarding the returned soldier and the problem which Canada will have:

By Dean Thomas F. Hunt

Just north of the United States, separated for the most part by an invisible line, lies a country either somewhat larger or just a trifle smaller—I do not know and it does not matter which. It contains about eight million inhabitants. I do not know whether Canada raised this year 29 or 31 bushels of wheat for each man,

In Front of the Farm Adviser's Office, El Centro

Left to right: A. E. Madison, secretary Imperial County farm bureau; C. E. Sullivan, adviser; W. W. Weir, drainage expert United States department of agriculture; J. P. Hertel, assistant farm adviser.

been dismissed. Holtville is worthy of far better railroad connection with the outside world that she now has.

State Market Director Weinstock urged the need of organization on the part of cotton growers, cantaloupe growers, dairymen, in fact every type of producer in the valley.

Walter Packard, whose abilities and energies have been so freely given to the developing of Imperial Valley,

woman and child, but I do know that the United States raised less than seven bushels per capita. Canada is particularly noted for her wheat and cheese, both as to quality and quantity; we for our corn and cotton.

The more imaginary that now imperceptible line becomes the better it will be for both countries. Canada will need our cotton, pork, oranges

Continued from Page 263

At the Barbecue

Dean Thomas F. Hunt of the state college of agriculture is getting a "helping" of beans from the Red Cross lady. Immediately back of Dean Hunt is B. H. Crocheron, farm bureau leader for California.

of Paul Dougherty who had gone into active service. This position he has filled several months, and because of his willingness to forego the greater honor and take a lesser salary he was tendered the position of permanent adviser, which he accepted at the time of the afternoon session of the Assembly.

The Assembly never called such an array of talent from other portions of the state. There were representatives of the state university, including Dean Hunt who made his address on "Canada at War."

Frederick Maskew of the state quar-

antine service in San Francisco explained with a series of illustrations the meaning to the Imperial Valley of the introduction of the cotton boll weevil. The service in San Francisco is most energetic in preventing the introduction of pests affecting California horticulture and agriculture. Instead of California agriculture, we might well say, American ag-

riculture, for owing to the importance of this port many articles enter the harbor which give opportunity for introduction of pests affecting agriculture in all of America. To prevent introduction of boll weevil or other pests of cotton this method of treatment is followed: Before it is allowed to be delivered to other sections of the state it is placed in an immense

steel container which is hermetically sealed and the air exhausted. Hydrocyanic acid gas is then generated and introduced into the vacuum, this at eight to ten times the strength which is used in the fumigating of orange trees. This gas is known to penetrate to the center of the largest bales of cotton.

Dean Van Norman of the university farm school had a couple of cows on the stage of one of the theaters, and with these, one a good dairy type, the other, dairy-beef type, he proceeded to show the lines wherein the successful dairy cow was manifest.

## More June Drop Discussion

Written for California Cultivator By Robert W. Hodgson

THE observations in the Cultivator of February 9 by Mrs. M. H. Dewey relative to the influence of intercrops in Washington Navel orchards on the setting of the fruits have been of particular interest to the writer. For several years the division of citriculture of the state agricultural college has been working on this problem, and the agricultural experiment station has recently issued Bulletin 290 in which the results obtained in the investigation are summarized in popular form. A more detailed technical paper will appear in the near future in the University of California Publications in Agricultural Sciences.

The citrus tree is a native of tropical regions where the climatic conditions are much more favorable for plant growth than they are in our California citrus districts. Through centuries of evolution the genus citrus has become best adapted to a tropical environment. The arid southwestern part of the United States where our citrus orchards are located is really a reclaimed desert where agriculture is made possible through the use of irrigation water. Therefore, citrus trees as grown in our climatic conditions are subject to an entirely abnormal environmental complex. Arising from the strains incident to these abnormal conditions are a number of exasperating troubles, such as the "June Drop," puffing of the fruit, splitting of the fruits, and others.

The "June drop" has been found to be caused by the inability of the citrus tree to exercise control over its water loss. Under California conditions the period beginning when the trees are in bloom, and continuing throughout the growing season is hot and dry. In ordinary seasons, it is not so much the heat which is noticeable as it is the dryness. In Southern California it is not at all uncommon to register relative humidities as low as ten per cent, although the temperature is not abnormally high. Under these conditions, during certain times of the day the young citrus fruits and leaves lose more water than they can get through the water conducting system of the tree from the supply in the soil. The fruits being higher in water content than the leaves, actually lose water to the leaves. Many plants, among which are the Washington Navel orange, cotton, indigo, and the chick pea, under such conditions of a daily fluctuation in water content of the young fruits, shed these parts by a process technically known as abscission.

Climatic conditions, therefore, are the underlying cause of the June drop, and that is why every year the drop is serious in certain very hot and dry districts. In other districts climatic conditions are not so severe and in normal seasons a good crop is set. But, if hot dry north winds or exceptionally high temperatures are experienced, a large part of the crop is shed. This is the explanation of the very heavy shedding which followed the heat wave of June 15-17, this last season.

A certain varying per cent of the shedding has been found to be due to a fungus *Alternaria*, which is also responsible for the black rot of navel oranges. The amount of shedding from this cause is so small and the manner of infection such that the writer does not believe spraying will pay for the trouble involved.

Since most of the June drop is pure-

ly climatic, methods of control or prevention must be in the nature of modifying climatic conditions. It has been found that growing alfalfa and other intercrops between the trees modifies the climatic conditions sufficiently to set much heavier crops.

One of the orchards studied in June drop investigation, is the C. W. Kellogg orchard, located just out of East Bakersfield. This orchard is well protected by a windbreak and a portion is planted solidly to alfalfa. Ever since this orchard was planted to alfalfa it has borne very satisfactory crops, whereas other Washington Navel orchards in the vicinity have failed to do so. The climatic conditions in the orchard have been greatly modified as was shown in the investigation, but it was impossible to differentiate between the effect of the windbreak and the alfalfa.

The writer had under observation last season a 40 acre Washington Navel orchard in Butte County, which was not protected in the least by any windbreak. In fact, the orchard occupies a most exposed position. In September, 1917, it was planted to vetch, and an excellent cover crop resulted. This orchard was not plowed in the spring, but was kept heavily irrigated until the vetch seeded and began to die. Plowing was done about June 1. In spite of the exposed position occupied by this orchard it bore by far the best crop obtained in the district this last season. Where others obtained a 20 per cent crop, it bore a 50 per cent crop.

The evidence secured in this June drop investigation points to two different factors, each sufficient, if accentuated, to cause the shedding by bringing about the fluctuations in water content noted above. One is high soil temperatures and the other low atmospheric humidity. High soil temperatures act to prevent absorption of water by the roots at a time when the draft of the atmosphere on the plant for water is very severe. Under the prevailing clean culture practices in most of our citrus orchards soil temperatures during the afternoon are quite high. In the Kellogg orchard the alfalfa acts both to decrease the soil temperature and to increase the atmospheric humidity. The former is accomplished by the shading and the latter brought about by the addition of large quantities of water vapor to the atmosphere surrounding the trees. In the case cited by Mrs. Dewey, however, as well as in the case just referred to above, this latter factor cannot be considered to be of any considerable magnitude. The effect noted seems to be due largely to the shading of the ground with the consequent reduction in the soil temperatures.

A word of caution regarding the crowing of intercrops to set heavier crops should be given. Growers cannot expect any beneficial effect of intercrops on the setting of the fruit unless sufficient irrigation water for both is applied. If only sufficient water is available to satisfy the demands of the trees, disastrous results can be expected to follow if intercrops are grown. The trees must not be permitted to suffer for lack of water, especially during the critical period which extends from the time of bloom for six weeks to two months afterward.

Other measures calculated to ameliorate climatic conditions may be expected to result in heavier crops. Such are the planting of windbreaks, soil mulching and a moderate winter pruning to reduce the excessive leaf area.

## RHUBARB

PLANT YOUR LAND NOW TO WINTER RHUBARB. You should get big crop by next fall. Others making \$1000 per acre, so can you with WAGNER'S GIANT—plant no other. Get your plants from originator and avoid disappointment. J. B. WAGNER, Rhubarb and Berry Specialist, PASADENA, CAL.

At the bottom of your letter to advertisers just say "California Cultivator" and prompt reply is assured.

## THE ORANGE OIL INDUSTRY IN JAMAICA

By United States Consul Charles L. Latham, Kingston, Jamaica

THE earthquake that in 1908 laid Messina in ruins and caused a setback to the Sicilian production of essential oils gave the first important impetus to the new orange oil industry in Jamaica. Previous to that time Sicily had been the chief source of supply of the oils of orange and lemon, and until large stocks were lost during the earthquake there was practically no sale for West Indian orange oil. There is a difference in chemical constituents between the Jamaican and the standard Sicilian oil, and buyers were not inclined to change and thus risk altering the flavor of their products. The adequacy of supply of the standard oil to which they were accustomed also militated against the Jamaican oils finding a market except at lower prices. Small quantities had been sold as low as 75 cents a pound, which was less than the cost of production.

The prices of orange oil rose on account of restricted supplies and the prospect of reduced production, and the rise marked an opportunity for Jamaican oranges. The trade at the time faced marketing difficulties as a result of the tariff against citrus fruits in the United States and the distance that separates Jamaica from other points where so perishable and bulky a fruit could be advantageously sold.

### Previous Production Experimental

The rise in the value of orange oil made it plain that there was money in the business of extracting it. Up to that time the production had been largely experimental, but the experiments had been sufficiently profitable to indicate that with increased prices, the local glut in production of the fruit, and the good supply of cheap labor the oil could be furnished in large quantities, and a worth-while trade built up as soon as prejudice against a new source had been overcome.

Orange oil has a strong aroma and is used in the making of perfumes, essences, cakes, biscuits, confectionery, soaps (to a small extent), and flavors for beverages. The strength of the aroma is ordinarily indicative of the quality of the oil.

The principal use for which Jamaica orange oil is sold is in the manufacture of fancy biscuits, particularly of a wafer biscuit which is extensively used in the United States with ices and iced drinks. Sales of the Jamaica oil also are made to drug manufacturers.

The essential oil of orange is contained in the small cells that form the outer layer of an orange skin. These may easily be seen under a magnifying glass. When some oranges are peeled the pungent oil spurts out to a noticeable degree. It needs no distillation, melting, or other process, as do some essential oils and perfumes. It has simply to be drawn off by tapping the innumerable tiny cells and collecting and saving the volatile fluid. It must not be diluted with the orange juice, and must not be exposed for more than a brief time to the light and air. It should not be extracted with anything made of iron or steel, or the delicate product will be injured. It should be kept in air-tight and absolutely clean receptacles. It is rather liable to deterioration, and great care in handling is necessary.

only one in vogue for the production of orange oil in Jamaica employs what is known locally as a "rinder," or escuelle, though the latter term really applies to a more elaborate machine such as is used in Messina. The rinder is a shallow copper basin coated with tin on the inside and studded thickly with sharp copper tacks of about three-quarters of an inch in length, pointing inward and upward. At the bottom of this vessel is an oil-collecting receptacle which is shaped like the spout of a funnel, with the larger end opening into the basin and the small end closed. Some of the rinders are made locally and do not have a very finished appearance. The tendency has been to make the points too long, too sharp, and uneven. The rinder is held between the knees of the operator, who is seated, and with the open palm of the hand the orange is rolled lightly over the points of the tacks. These prick the cells of the rind, and the oil oozes out. The orange is ordinarily rolled until no more oil exudes. When the funnel is filled the oil is poured through a piece of cloth into an ordinary bottle which holds a quart or less.

At this stage of the process the oil frequently is found to contain some orange juice, and at times a mucilage. These foreign substances sometimes make it necessary that the oil be permitted to settle. Thereafter it is carefully drawn off and filtered into copper pots or pans, lined with pure tin, or occasionally into tin receptacles. The rinding, though a simple operation, requires some care and skill. The length and evenness of the tacks in the rinder are important factors for the extraction of the oil without great waste. They should prick the orange skin only. If they are uneven, or too long and sharp, either all of the orange oil will not be extracted without increased labor, or the orange juice will come through and make extra filtering necessary, with its attendant waste.

Several attempts have been made in the past to introduce machinery to supplant the simple rinder now in use. These have met with but little success. The rinding in Jamaica usually is done by women or children who work for small wages.

Very little oil can be taken from the skin of each orange, so that considerable labor is necessary to get even a pound, and the quantity of oranges consumed is very large. The trees are scattered, and the gatherers, principally girls and young boys, are sent out into the properties to gather the fruit and collect the oil on the spot. They soon become very expert. By this method they have only to carry the oil to the manufacturers, the fruit being left on the ground.

In Jamaica the oranges are not cultivated in groves as in Sicily, but are spread out over the country in pastures and on hillsides. The orange oil is collected by the groups of girls and boys operating as follows: The boys shake the oranges down, and the girls sit below the trees and do the rinding. They may eat as many oranges as they like, of course, and after the rinding the rest of the fruit usually is flung away, cattle and pigs feeding upon it to a certain extent.

The laborers in Jamaica are paid from 30 to 60 cents a bottle, according to the quantity of oranges available within certain distances, and the laborers have to collect the oranges. The picking is done in the early hours of the day; the rinding should be done immediately in order to get the greatest quantity of oil of the best color. The fruit should be picked when full, but not entirely ripe, as in the latter condition the oil has a deeper color and brings a lower price. If the picking and rinding take place during the heat of the day the yield is smaller than when done at a lower temperature. The operator sometimes sits on a box, the rinder being attached to an arm extending in front. A good worker will get 2½ pounds of oil from 1200 oranges.

#### Quantity Depends on Condition of Fruit

A local dealer states that 500 oranges will yield approximately one pound two ounces of crude oil, or one pound filtered, and that it takes eight hours to produce one pound of crude oil. The quantity obtainable depends entirely upon the class and condition of the fruit. Oranges grown in a cool section of the island will yield more oil than the fruit grown in a warm one.

## Bean Bags

Lima bean growers are in luck in having ordered bags for next season's pack. We note in the Lima Bean Bulletin:

"Having made careful investigation from various sources which led us to believe that, unless the war ended suddenly or unless a dry year very materially reduced the grain crop, there would be very little likelihood that prices on bags would be lower, and, on the other hand, conditions were such that it might easily prove that only those who placed definite orders when opportunity offered would be able to secure their supply of bags, we promptly protected the definite orders of our grower members by placing contracts with two of the bag companies. These orders total an equivalent of 525,000 bags of 80 pound size, although a considerable portion of orders were for bags of 100 pounds size. Contract prices were 16 cents and 20 cents per bag f. o. b. San Francisco. Within a few days these prices were advanced one cent per bag, to 17 cents and 21 cents each. We understand independent dealer quotations are about two cents per bag higher than these prices.

"We think we have sufficient quantity fine grade flax twine on hand and contracted for August delivery to sew all the bags ordered through us by our members, if the twine can be properly distributed. One 12 pound bundle of twine will sew 2000 bags. If members will advise their local secretaries that they desire to purchase twine through the association for sewing the bags they have ordered, we will try and see to it that each local association is supplied with proper quantity of twine on above basis. We are going to be able to furnish twine at a price in the neighborhood of 63 cents per pound. Similar grade of twine is worth from \$1.10 to \$1.15 per pound on today's market."

As a war measure the government of Portugal has created a special department to encourage all necessary agricultural operations during the world war and for two years after the treaty of peace is declared. By this decree, the means of renting cattle, motor machines, and implements will be placed at the disposition of the farmers who need them. The employment of all materials that may be used as correctives and fertilizers will be encouraged. Fertilizers and seeds will be furnished to those who require them, to be paid for immediately or at harvest time.

COUNTY ANNUAL ASSEMBLY

Continued from Page 259

and casaba melons. The United States will need their wheat, beef, wool and furs. We need her tourists; she needs our farm laborers. The acme of prosperity in Western Canada is shown in one's ability to spend the winter in California. Naturally and properly they assert that Canada is the only place in which to live, but if they want to tell you how prosperous a man is, they say he has enough money to spend his winters in California.

In much of Canada below zero weather usually occurs during each of five months in the year. In some good agricultural sections the mean January temperature may be below zero. At one of the most prominent dominion agricultural experiment stations the temperature last January touched 51 degrees below zero. The guide books have perfect warrant in stating that in all respects Canada is a white man's country. The climate of Canada produces a fine race of people. There are none better. It is Emerson who said that "the truest test of civilization is not the census; nor the size of the cities; nor the crops, but the kind of men the country turns out." Canada has met this test during the past three and a half years.

It was my privilege to spend the latter half of October in Canada in order to determine if possible what happens to a people and its agriculture during three years of war.

Re-education of the Soldier

In October Dr. H. M. Tory, president of the University of Alberta, had just returned from England and France where he had gone under the auspices of the Y. M. C. A. to prepare an educational program for the demobilized soldiers. As President Tory puts it, "to save the intellectual elements of the army." Men's lives have been so intensive that they have forgotten that they ever knew Euclid. Put under the proper surroundings the lost knowledge would return. The constant fear of the soldier is that he must take a lower walk in life than that to which he has been accustomed. Out of 1860 men examined 1370 stated they desired to pursue some form of education after the war is over. Of this number 600 desired training in agriculture, while a similar number stated a preference for engineering. Dr. Torey believes it will be possible at some camp in England to provide intensive training or formal instruction to 40,000 and to provide popular lectures for 100,000 additional men. The professors of the universities of Canada will be called upon, as well as officers of the army who were formerly in the faculties of those institutions. The plan has governmental approval, and Dr. Tory is now probably in England working out a skeleton organization and developing the curricula. It is estimated that this salvage can be accomplished for \$1,000,000, the cost to Canada of one day's war, and that it will be easily worth \$10,000,000 to the country.

Land Settlement

Canada has passed a law that any returning soldier may have in addition to the usual homestead right, which is an allotment of 160 acres of land, a government loan of \$2500 without any other security than the fact that he is a returned soldier. In the three prairie provinces of Manitoba, Saskatchewan and Alberta there are 10,000,000 acres of available dominion land within ten miles of a railroad, 15,000,000 acres within

15 miles of a railway, 20,000,000 acres within 20 miles of a railway and 270,000,000 acres over 20 miles from a railway. This is not all the agricultural land that the Canadian government possesses, but not being the immigration agent for Canada I desist from further expansion of the subject.

However there is not full agreement as to the plan just outlined. The minister of agriculture of Alberta favors issuing bonds and purchasing railroad lands near railroads. He would sell the land to returned soldiers, provided they were previously farmers or farmbred, on a 30 year amortized pay-

ment plan. He deems it better to locate these people close to a railroad than to try to colonize a wholly new country where they must develop new railroads, county roads, school houses, churches and towns, all of which must be paid for chiefly by the community itself.

It may not be out of place here to refer to the land settlement plans of the Canadian Pacific Railroad "While our enterprises are now successful," said Mr. Cameron, "more than half the settlers did not stick. That, however is true of most homesteaders. Although a certain percent-

age of the original settlers has been very successful, it is the third set of families that usually succeeds."

The three factors essential to success emphasized by Mr. Cameron are:

Obtain suitable settlers by hand picking.

Give them a sufficiently large piece of land to make a decent living.

Do not practice too much spoon feeding. For example if settlers are not held somewhat rigidly to their contracts, they are apt to buy pianos instead of making their payments.

Coachella Valley is shipping quantities of early asparagus.

# 150,000 Farmers Quit "Guessing" When They Paid Our Dealers \$10,000,000 for "Z" FARM ENGINES

150,000 Farmers Chose These "Z" Engine FEATURES:

1. Fairbanks - Morse QUALITY.
2. Economical in first and fuel cost, and low up-keep.
3. Simplicity and staunch durability.
4. Light weight, substantial, fool proof.
5. Gun Barrel Cylinder Bore.
6. Leak-proof Compression.
7. Complete with Built-in Magneto.
8. More than Rated Power.

Economy and efficiency, with "more than rated power" in an engine is the war-time-demand of farmers of America.

They have "quit guessing"—they demand action, proof-performance on their kind of work.

So 150,000 leading owners have backed their judgment on the FAIRBANKS-MORSE "Z" Engine with \$10,000,000.

That's a lot of engines bought for reasons you'll find are wise ones.

## "Z" 3 & 6 H.P. ENGINE

Uses Economical KEROSENE Also Distillate, Coal Oil Tops or Gasoline

Kerosene, easy to get, at half gasoline costs, does the work in a "Z" with more than rated power. FAIRBANKS-MORSE engine designers saw this war-demand coming and built "Z" Engines to fit the farmers' needs. The farmers know it now—over 150,000 strong. Will you too investigate? Compare. Figure out the FACTS—before you buy ANY Engine. *Alright—we know the result, because—*

**You Also Get This Local Dealer Service**

Go to the Fairbanks-Morse Dealer. He is in position to render you prompt and personal service. He has exactly the "Z" for your NEEDS in stock and can make quick delivery. See it in operation on his floor.

3 H.P. \$89.00  
6 H.P. \$156.00

## Questions and Answers

ANSWERS BY EDITOR AND STAFF

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

### Standard Varieties of Chickens

The animal husbandry division of the U. S. D. A. has issued a bulletin on Standard Varieties of Chickens, Farmer's Bulletin, 898. It gives a drawing or glossary chart naming various sections of fowl, also half tone illustrations of all types of the Mediterranean breeds. The bulletin may be had by writing the Division of Publications, U. S. D. A., Washington, D. C.

### Feed for Turkeys

Having found your "Questions and Answers" column to contain reliable information I would like your advice in regard to the eggs our turkeys lay. The eggs are either soft shelled or have two or, even as many as three, yolks in them. Out of one setting of 13, six were double or three yolks, three were soft shelled and four were good. Our turkeys have free range, being in our alfalfa most of the time. They have plenty of oyster shells all the time but we do not feed them anything else such as grain, etc.—Subscriber, Acampo.

Breeding turkeys should have some hard grain. Wheat and oats are best but other grains may be given. Your turkeys are not getting sufficient protein to make a white for every yolk nor lime enough to make a shell for every egg. Oyster shell is all right as far as it goes, but they need the mineral matter as well as the protein of hard grain. Many breeders let the turkeys forage for themselves when they are not laying, but when laying time comes they must be fed.—J.A.K.

### Possibly Chicken Pox

Our chickens have little white seed-like formations under skin. A nice fat hen had nearly a teaspoonful when we killed her. It is more noticeable in chickens over a year old but even fryers have them.—Subscriber, Huntington Beach.

Those little white seed-like formations under the skin may be the beginning of chicken pox. It would be impossible to say without knowing more of their location, number, appearance, length of time they have been there. If they develop into larger nodules and finally form a scab, your hens probably have a mild form of chicken pox. If there is no change at all you might try painting some of them lightly with tincture of iodine. It could do no harm and might scatter the formation, whatever it is.—J. A. K.

### Worms in Gizzard

On the thin part of gizzard in the younger chickens principally there are wire worms. There seems to be an abscess, but when opening, a nest of from two to four worms is found and you can see where they have perforated the inside of gizzard. These chickens have free range of ranch. — Subscriber, Huntington Beach.

The worms in the gizzard may be treated with tobacco. For 100 chickens steep one pound finely chopped tobacco stems two hours in water and mix the liquid with ground feed sufficient for half the usual feeding. This mash should be given about 2 o'clock, the fowls having had nothing to eat since the night before, and not a full meal then. Two hours after the mash is fed, give half the amount of mash previously given, but this time moistened with water in which Epsom salts, (11 ounces for 100 birds) has been

dissolved. Repeat the treatment in seven days. The amount given young birds should be in proportion to age.—J. A. K.

### Getting Rid of Salt Grass

I have some low, black, damp land that previous to the flood of two years ago was in good producing condition. At that time the alfalfa was drowned out and since then has not been plowed until the past week. (Has been too wet for farming). During the two years a heavy growth of salt grass has formed; so that the heavy root growth made it very heavy plowing with good team. Since disking and harrowing the ground it appears almost a mass of roots in spots. Can you tell me how best to get rid of the salt grass? Have been advised by a neighbor to plow several times with breaking plow during the summer and not try to raise a crop, but that means a year's crop lost. Would it be advisable to sow barley now with the view of smothering out the salt grass, and when the barley is harvested sow in Sudan grass with the same end in view, provided sufficient moisture is present? Would it be advisable to try to raise some crop that could be thoroughly cultivated, such as cabbage, corn or milo, in the soil less affected by the salt grass? There is some alkali, but not enough to seriously affect crops, I judge. With a reasonable rainfall the rest of the season the ground will require no irrigation for this year—Subscriber, Hemet.

It is difficult to describe the proper treatment without having seen the land but would suggest the following: The first thing to be done, if it is possible to reach a lower outlet, is to put in deep drains sufficiently close together to take off the surplus water to a depth of four feet. This will take out the alkali and put the soil in condition to cultivate earlier in the season. The cultivation that can be given will retain moisture sufficient to mature crops. The treatment to control the salt grass should be as follows: Plow as shallow as can be done with a 16 inch mouldboard plow having a sharp share. This will likely be about five or six inches deep. Then go over the ground with a double disk harrow with large disks and follow with a spring tooth harrow having the teeth set to run as deep as the plow. The spring tooth harrow will have to be cleaned often but will bring out the salt grass roots which can be burned. A second disking followed by the spring tooth harrow may be necessary to get most of the roots after which plow again to a greater depth and go over with disk and spring tooth as before. If the work has been well done there will be but few roots left. Barley will not be successful in keeping down the salt grass but Sudan grass sowed broadcast, or drilled close will hold the salt grass in check. If the control method as above outlined is carried out a crop of corn or milo can be grown but this should be cultivated often, both to discourage the salt grass and to increase the crop yield. The milo will come off the latter part of September or the first of October and if any salt grass should be showing the land should be plowed and cultivated to clean out the remaining roots.—J. B. N.

### Native Chinquapin

I have been told that there is an indigenous chinquapin, or chinkapin, in the mountains above San Bernardino. Can you give any information regarding it?—Subscriber, Lakeside.

The chinquapin growing in the Sierra Madre, the San Gabriel and San Bernardino mountains, especially along the "Rim of the World," at an altitude of about 6000 or 8000 feet is the *Castanopsis Sempervirens*.

**Eucalyptus Seed**

Where can one secure seed of *Eucalyptus Pulverulenta* spoken of on Page 169, issue of February 9 of the California Cultivator? — Subscriber, Lakeside.

Seedmen advertising in the California Cultivator can supply this seed.

**Liquid Smoke for Curing Meats**

What about liquid smoke? Is it possible to secure it and is it successful?—Subscriber, Kellogg.

Liquid smoke may be obtained of any druggist and is usually considered successful though somewhat more expensive than the old-time method of smoking. The liquid is brushed over the hams or bacon to be cured and the process repeated for several days. Particulars as to methods of work are given on the package.

**Cold Storage Plant**

The question as to a low-priced, economical cold storage for the farm is one of vital interest in California and occasions many inquiries in this department. The matter was referred to Madison Cooper, at the head of one of the largest refrigerating plants in the United States, at Calcium, New York. Mr. Cooper writes:

"No, there is no such thing as an inexpensive or low cost cold storage plant. If there were they would be as numerous as flies in summer, as the demand for a cheap cold storage plant is unlimited. Any kind of a cold storage plant is an expensive proposition at best; hence they are comparatively rare. For the same reason those in service have proportionately high earning capacity. The so-called power machine driven by electricity is a rather taking thing on the face of it, but I would not recommend it to anyone. In your country where power costs are high and where ice is high in price also, refrigeration is expensive not only in first cost, but in cost of operation as well. The Cooper Brine system, using ice and salt for cooling, is probably the most perfect cold storage system, so far as results are concerned, to be had. There is nothing that will give as perfect control of temperature and as perfect control of purity and dryness of the air of the room. The suggestion to have a frost-proof building, as we call it here, or what is really an insulated building, and open it when the nights are cool and close it during the daytime is all right enough, but it gives very poor control of temperature as compared with artificial means of cooling, and while your subscriber might get some results by this method his results would not be anywhere near as perfect as with artificial cooling. These fruit houses cooled by ventilators are all right enough for short periods but no good for long holding, and should the weather happen to be rather warm at intervals during the storage period, great damage is likely to result to the goods in storage. To sum up, I should say that there is nothing better than the ordinary ice refrigerator for the simple purpose of hotel or country use. This refrigerator should in your climate, where the ice is so high, be especially well insulated. The average refrigerator is a very poor thing indeed so far as insulation is concerned."

**Curing Lemons**

I have a Eureka lemon tree in my back yard which is loaded with fruit just beginning to turn yellow. Can you tell me a simple way to cure them properly and when they should be picked? Will they keep if they are laid in the attic? — Subscriber, Los Angeles.

If lemons can be kept growing until proper size they should be gathered regardless of color. Some of the finest of cured lemons are made from absolutely green stock. The garret would not be an ideal place because of occasional high temperatures and probably too much ventilation and consequent wilting of the fruit. Some of the finest cured lemons we have ever seen were carefully picked from the tree, placed in moist sand, covered entirely, the sand being kept moist until lemons were used. This simply for home use, for they will not keep long once removed from this sand. It goes without saying that they should be kept in a cool place. We have also seen well cured lemons taken from the moist dirt at the roots of the tree. A hole was dug, lemons placed in the soil, covered with dirt and settled about the lemons by irrigation. In curing by the more usual process one must be careful and not allow lemons to dry out and shrivel. In a large way the attendant visits the curing sheds often, observes the amount of "sweating," admits air as may be necessary. For home use one may pack closely in ordinary lug box, and if too much air is admitted, each fruit may be wrapped in scraps of old newspaper. Keep cool or at as even a temperature as possible.

**Soft Brown Scale**

What is the best spray for soft brown scale? — Subscriber, Los Angeles.

We believe the best spray for this pest is the old time rosin wash which is somewhat difficult to manufacture unless one is fitted for it, but it is now made as a regular commercial product and simply calls for dissolving in warm water. Spraying with oil emulsion or commercial oil sprays is also successful. If the pest is on orange trees fumigation is usually successful.

**Dipping Orchard Heaters**

Answering request for information as to dip for orchard heaters, J. E. Adamson of Pomona writes; "There is nothing better than heavy crude oil put on warm, and preferably during warm weather."

**Curing Ham**

Please give direction for curing ham. I am told that the meat spoils around the bone unless an incision is made and the curing solution is forced

ed around the bone or the bone removed. Is any special instrument or tool needed to do this? — Subscriber, Los Angeles.

We think there is no danger of spoiling and no necessity of removing bone if proper time is given to the salting. Where proper penetration of salt has not been secured it is possible hams may begin to spoil at the bone. In order to prevent this some follow the plan of making narrow incision to the bone and inserting salt and saltpeter. We do not think this is necessary. Allow seven or eight weeks time for curing, and we do not think there will be any danger. From Coburn's "Swine in America" we take: "To each 100 pounds of meat use 7½ pounds fine salt, 1½ pounds granulated sugar, four ounces saltpeter. Rub this mixture thoroughly into the meat, especially on the skin side. Pack closely in jar or barrel. Fill with water. When cured thoroughly wash off salt, dry and smoke for 48 hours or longer. This formula is very similar to that used in the larger packing houses." Here is another: "Coarse salt, seven pounds, brown sugar, five pounds, saltpeter, two

Continued on Page 282

# Test Special Belting

What a lot of chores there are to do. There's the farm pumping plant, a busy, humming wheel, turned by the TEST SPECIAL belt, to bring up the water and send it on its useful course, raising crops and watering the animals. TEST SPECIAL is the practical belting for the churn, the wood-yard saw, and the feed-mill, just as TEST SPECIAL is the dependable belting for the lighting plant, and for all the domestic needs. Why buy a miserable, cheap belt which gives way and renders such poor service, when TEST SPECIAL is so reliable, so worthy of confidence, so sure to last and give years of permanent value?

Fill Out This Coupon—Mail It TODAY

New York Belting and Packing Co.

**OUR ADVERTISERS RELIABLE**

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscribers must have mentioned the Cultivator when writing the advertiser.

**THIS WEEK'S COVER**

The school house is becoming more and more the social center of every community. It reminds some of us of the days of the old log school house, or at least of the little red school house, when a narrow board six or eight feet long holding a dozen or more candles, all suspended from the ceiling, made a fine chandelier, and the singin' school or spelling bee afforded occasion for packing the old house to its limit. Later there came a time when the school room was kept sacred for its one purpose, but now it is open to almost every event which has for its object the bettering or uplifting of the community. The photograph on the cover of this issue shows a gathering of the people at the high school of Holtville, Imperial County at the Annual Assembly of the farm bureau of that county. It was a history making event, and Holtville gave royal reception to the farmers of the valley and to speakers from many portions of the state.

**TEST, DON'T GUESS**

Corn growers of the Middle West are adopting two slogans: one, "Do not import seed corn;" the other, "Test, don't guess." These slogans both should convey to California producers truths worth while knowing. The corn grower has learned the need of acclimatized seed. Not so many, but a few, have learned the value of the other slogan which has to do with the testing of seed. But if the farmer, who depend upon the summer-through precipitation from the skies to save irrigation expense and whose lands, as a rule, are far lower priced than those of the Californian, finds it wise to secure greatest efficiency by testing his seed and knowing its characteristics, surely the Californian should be more desirous of testing and selecting.

**OUR BEST**

A glorious rain has come. A bit later than some wished but so copious that every section of the state shows California at work as never before.

We are now doing our bit—our B-E-S-T.

**THE ORANGE SHOW**

It's a great showing of citrus fruits and products. It's a great rain which has been poured out in blessing upon it. It approaches its end with glorious sunshine glistening on the deep snows of its nearby mountains. More another week.

**FAMINE**

President Schurman of Cornell University says: "Of all the great problems of this colossal world war the food problem is now the most important. Man power can be raised by conscription up to the point of exhaustion. The allied lines from the North Sea to Switzerland are piled high with munitions, which the output of French, British and American factories is constantly augmenting. But everywhere the supply of food is limited, and beyond a very narrow margin you see the edge of an inferno of starving nations. Yet no problem of the war is so much misunderstood. The simple question is this: Can we keep our own and our allied soldiers and civil population from starvation? It is not all a question of price. It is solely a question of supply."

A year ago we began this campaign for producing more food, and we answered the call with even greater production than anticipated by many. Still, few of us realized the necessities of our allies or of the neutral countries of Europe. So far as we could we have met their needs, and our response has been so liberal that today some of the largest centers of the East are finding themselves going hungry. This may be due to transportation difficulties, to food hoarding, or perhaps a number of other things, but it affords opportunity for all to stop and ask what will be the condition of all of us a few months from now. President Schurman is one of the many who are calling attention to this condition and asking American producers to do their best.

**COURIERS**

The greatest of generals, with the bravest and best trained men in the trenches, would be unable to render effective service for his country without possibility of communication. Hence the necessity for the bravest and most dependable courier, or carrier of the message. Now, with our food campaign calling for as persistent and effective work as the best of work in the trenches, the administration at Washington, and all of its commissions and organizations working for greater production, would be helpless without means of carrying the word to the men who do the producing.

The California state council of defense, recognizing the value of the papers of the state in extending the usefulness of its work, has devoted some time to investigating the accomplishment of these papers. It has found that "Figuring on a basis of two cents a line, advertising space worth more than a quarter of a million dollars has been contributed by newspapers in California to war publicity propaganda sent out by the California council of defense since April 6 of last year."

The council adds: "This does not include any publicity given to the efforts of the department at Washington or to liberty loan publicity or other than strictly state work."

We believe no service has been rendered more willingly to our government than this by our newspapers, and it has all been without one penny of compensation. Yet the congress of the country would penalize this great force by increasing its postage rate until papers printed in the United States will pay from six to 40 times as much as do papers in Canada.

**KILL THE "BOARDERS"**

Cow testing came and showed many a dairyman that he had many an animal which was not even paying for its own feed to say nothing of the labor of caring for it. Why does he keep them? Because he has not yet learned how easy it is to weed out these non-profit bringers. The cow testing association is accomplishing that.

To encourage the use of only the very best animals among the farmers these dairy cow record associations endeavor to induce their members to not only test their cows to know the point of profit bringing but to bring them far beyond mere profit bringing and to make great producers and determine strains which may produce other great producers. Hence advanced registration open only to cows of greatest worth.

Now the wool producers are discussing the advantages which would come to their industry if they could put their fine-wooled sheep into an advanced registry. Note the ideas advanced by Prof. Miller in issue of January 26. Why may not advanced registry extend to other animals as well as to the dairy cow?

**FIX-IT-WEEK**

The winter's breaking up back East, and the food administration, council of defense and other agricultural efficiency experts are urging that this next week shall be a general time for repair, fixing up and taking stock of the needs of the coming season. The week is perhaps rather late for these glorious rains and there will be one grand procession of plows, of drills and harrows from Shasta to the Mexican line, and only such fixing as is necessary will be possible. But the idea is a good one, and the man who is not able to engage in actual soil tillage may well use every spare moment to check up needed parts of implements and machinery, to rebabbit the bearings, to repack and put in new valves on every leaky water fixture, to take stock as to needed seed, sacks, crates, orchard boxes, trays, implements or tools of any kind—and get orders in early.

Perhaps in overhauling the mower or some machine or implement needed a month or so later, it may be found that it is worn beyond economical repair and purchase of new is necessary. There will not be machines and implements enough to go around this year, and the early bird will get the best picking. There is too much money invested in some of our better farm implements, and too much invested in the crops which we are producing, to take any chances in a machine lying idle when it should be saving a crop.

In this connection it may be proper to suggest that in overhauling these machines there will be much junk or old iron which may be turned into coin and give the manufacturer the

iron which is needed to put into new implements.

Remember first week of March paint, repair, order new or fixit ready for service.

**This Week's War News**

No action whatever on the Saloniki front.

"Three years longer of war" is said to be the belief of many in Washington.

The Italian front has been quiet with a little possible advantage with the Allies.

In Palestine the English forces under Allenby have advanced slightly, the town of Jericho, down near the head of the Dead Sea, being captured.

Lord Reading, the new special British ambassador and high commissioner, has arrived at Washington. Cecil Spring-Rice, the former ambassador, died in Canada on his way home.

This country was stirred by the claim that the American front in France has been endangered by lack of airplanes. The war department assures, however, that this need will soon be met.

Breweries of the United States have been instructed to purchase no more barley until more definite ruling can be made by the food administration as to future use of grains in the manufacture of intoxicants.

Artillery activities have increased somewhat on the French and Belgian front, and the Sammies have had almost daily practice in trench raiding or repelling Teuton raids. Every day brings its report of one or more American boys slain.

Von Hertling has replied to Wilson's address to congress: "Fundamentally agreeing with the four principles which President Wilson proposes" but "they must be applied in mutual exchange of views." It is considered merely a shifty evasion. "We will hold Alsace-Lorraine" is the cry of the militarists.

The Germans have captured Reval on the Baltic Sea, and are within a day or two's march of the city of Petrograd. The Russians have finally roused up and are making weak resistance, but it is considered that Petrograd is doomed. The Germans announce they will treat with Russia as a conquered nation and refuse to confer regarding any peace treaty. It is rumored that Japan will enter Siberia and prevent German control.

As to battles or severe fighting this has been one of the quietest weeks of the war. There have been deaths of student aviators, occasional trench raids, the German army has marched a little deeper into Russia, but nothing decisive anywhere has occurred. On the other hand, it has been a great week from the standpoint of diplomacy. In this Germany seems to be the winner with an upheaval in Russia which leaves all the world guessing. The great task now confronting the Allies seems to be that of bringing the scattered fragments of the Russian nation together.

"The paths of the sea must, alike in law and in fact, be free. The freedom of the seas is the sine qua non of peace, equality and cooperation."

Gerard has said, "The only power which the Prussian will respect is the power of force." Strength to the arm of the president that our force may be swifter in action.

"The time will come when this great conflict is over and when the truth can be impartially determined. When that time arrives, those responsible for violations of the rules of civilized warfare, if such violations have occurred, and for false charges against their adversaries, must of course bear the burden of the judgment of the world."

# Agricultural News Notes of the Pacific Coast

## Northern California

Butte County is canning spinach.

The Alameda County Farm bureau will employ a cow tester.

The dates of the next state fair are August 31 to September 7.

The next fair at Ukiah, Mendocino County, will be August 5-10.

There will be a farm adviser conference at Berkeley, March 4-9.

A new alfalfa meal mill has been located at Woodland, Yolo County.

Marin County now reports green feed for stock following recent rains.

Auburn, Placer County, is improving its roads with chain gang specialists.

Ferndale, Humboldt County, already has its plans completed for its fair to be held next August.

The next meeting of the Alameda County farm bureau will be held at Centerville, March 2.

Potatoes are the cheapest since the war, but there will be general planting in the present outlook.

Petaluma poultrymen feel that their cooperative marketing organization is in a stronger position than ever before.

A war conference at which producers of all California are invited to be present is called for San Francisco, March 5 and 6.

Deciduous fruit growers who have observed conditions in the northern end of the state predict an exceptionally large crop.

Farm Adviser Merrill of Sonoma County announces that Sonoma County has sufficient pasturage to care for much outside stock.

A by-products company is planning to purchase pits of peaches and apricots from canners and dryers for the purpose of extracting oils.

Opponents of Reclamation District 833, comprising 40,000 acres near Gridley, Butte County, are opening a fight for dissolution of the district.

Sutter County has signed up 6000 acres of raisins with the Associated Raisin Company. This is practically the entire raisin acreage of the county.

Manager Porter of the Palermo, Butte County, Citrus Association, reports that members received an average of \$2.87 per box net on all oranges shipped through the association.

The food commission of California is cooperating with cattlemen in endeavoring to bring together pasturage and starving cattle. L. A. Nares of Fresno is in charge of the work.

The Ehmman Olive Company at Oroville is transplanting 3000 olive trees, 26 years old. The trees are being brought from Lodi in San Joaquin County, where the trees were planted 24 feet apart.

At a meeting of live stock men at Napa, with delegates from many northern counties, method of coyote control was discussed, and it was recommended that there should be a bounty of \$20 each on coyote scalps and \$2.00 on wild cats.

The secretary of agriculture has authorized nine per cent more stock to be grazed in the Stanislaus national forest this year than last. The number authorized to be grazed this year is 20,625 head of cattle and 10,850 sheep. In 1912 the number grazed was 13,000 cattle and no sheep.

## Central California

The entire valley was visited by a fine rain last week.

Stanislaus has completed 92 miles of its contemplated 126 miles of good roads.

Peach growers of the San Joaquin Valley are spraying for curl leaf prevention.

Federal agents are conducting investigation of poisoning of 350 sheep south of San Francisco.

The Terra Bella irrigation district will take over the plant of the Terra Bella City Water Company.

If seed can be secured the planting of Long Staple cotton in the San Joaquin Valley will be immense.

The greatest rabbit drive yet pulled off in the state was on Washington's birthday in Stanislaus County.

Madera recently held a drive which netted 6000 rabbits. It covered six sections of land and 600 people engaged in it.

The raisin packing plant at Madera is being extended and improved in anticipation of a great pack the coming season.

Farmers of Madera County are appealing for relief from the game laws protecting cottontails which are doing immense damage.

The Kern County farm bureau has an auction manager who manages various auction sales under the direction of the farm bureau.

An agricultural expert from Victoria, Australia, is investigating methods of work of various farm bureaus in the San Joaquin Valley.

The state fish and game commission announces that mud hens make exceptionally good eating and owing to the prejudice against the name suggests "water chicken."

It is reported that wild geese are doing great damage to the wheat fields in the Tulare Lake district and it is urged that the closed season on geese be opened for the time being.

The Associated Raisin Company has elected officers for the coming year. They are F. H. Wilson, W. V. Buckner, H. H. Welsh, A. G. Wishon, H. Graff, Hector Burness, and Wylie M. Giffen.

Monterey County and Santa Cruz County bee keepers are to meet at Monterey March 2. Profs. de Muth and Coleman of the United States department of agriculture will make addresses.

Chairman Roeding of the Kings River Conservation District presided at a meeting held in Fresno last Thursday, which advanced plans for perfecting an immediate permanent organization.

The Modesto irrigation district has refused to join the Turlock irrigation district in its plans for building Dam No. 2 on the Tuolumne River. It is estimated that the cost of such a dam would be about \$3,000,000.

A ruling of the internal revenue permits in making reports of income for income tax the deduction of irrigation district taxes which have been paid to meet current expenses, but assessments to extend canal systems or pay for permanent improvements are not deductible.

At a meeting of stockraisers of the San Joaquin Valley, held at Fresno on February 7, to confer on some method of dealing with the feed shortage problem, it was decided to make an appeal to the government to permit use of the national parks and reservations for the summer of 1918.

## Southern California

County Food Administrator Cole of Los Angeles County has appointed a "fair price committee."

The Los Angeles County farm bureau has issued Vol. 1, No. 1 of the Farm Bureau Monthly.

The national orange show is now on at San Bernardino. The last day is Thursday, February 28.

Holtville shipped out more than 45 tons of turkeys for the Thanksgiving and Christmas markets.

Coachella Valley in Riverside County recently shipped a full car of spinach to Eastern markets.

Honey produced at Brawley, Imperial County, has been selling at around 16½ cents per pound.

At the recent meeting of the Hemet Orange Growers' Association, F. W. Stetson was elected president.

A proposal to establish a cooperative cannery at Lankershim is arousing much interest among fruit growers.

The Lima Bean Growers' Association has succeeded finally in securing sufficient supply of sacks for next season.

Grain producers who have seed already in the ground feel that the recent rains give practical guarantee of a good crop.

The embargo on cotton from the Imperial Valley has been lifted and shipping is now active. There are still 40,000 bales in the valley to ship out.

The Chino farm center met last Tuesday at the George Junior Republic. Professor V. C. Bryant explained the use of the Babcock tester for milk.

The organization of a milk producers association in Imperial Valley was one of the features of the agricultural assembly held at Holtville last Thursday.

A. L. Paschall, Riverside County's new farm adviser, has taken charge of his office. Mr. Paschall has been in charge of similar work for a number of years in Arizona.

Southern Pacific officials assure cantaloupe growers of the Imperial Valley that the congestion of freight will be cleared away in time for cantaloupe shipments to the East.

A meeting of all fruit growers of the Hemet Valley who will need to employ help the coming season was held at Hemet last Saturday. Plans were laid to secure and house help.

The Eighth National Orange Show at San Bernardino pulled off a great show in the face of the handicap of severe rains. One of the most striking exhibits was that of the national forest service.

The citrus experiment station at Riverside is developing its experimental work, one feature of which will be the planting of a walnut orchard, probably somewhere in Orange County, for the purpose of observing trees resistant to blight, and behavior of scions on different root stocks.

The tractor short course at the citrus experiment station demonstrates the wide spread interest in tractor farming and the demand for instruction in handling tractors. There were many more applications for instruction than it was possible to accommodate. It was necessary to restrict number in classes to 200.

## The Coast and General

Utah estimates a material increase in her sugar beet acreage.

Twenty-seven counties of Oregon will have county farm agents.

Sequiam, Washington, is to have a \$100,000 milk condensing plant.

A \$6000 state fish hatchery is to be constructed at Everett, Washington.

A carload of Merino ewes was recently received at Pilot Rock, Oregon.

E. G. Peterson, a native of Utah, is now president of Utah agricultural college.

But little corn has changed hands, and most of the reserve is still in the farmers' cribs.

The first rain in the year fell in southern Texas last week. The section averages about 28 inches.

New York has a canal costing 101 million dollars without a canal boat on it and no funds left for their building.

The state's prison of Washington will have an output of jute bags this year 25 per cent less than that of last year.

The American Fruit and Vegetable Shippers' Association recently met at Washington and adopted a new set of by-laws.

Pear growers of Rogue River, Oregon, are organizing for a publicity campaign to induce greater consumption of pears.

Long Staple cotton growers of the Salt River Valley of Arizona have decided to cooperate in the construction of cotton gins.

The food administration has forbidden slaughter of producing hens, no marketing to be permitted between February 23 and April 1.

The next International Dry Farming Congress and International Soil Products Exposition will be held at Kansas City, October 16-26.

Prune growers near Blalock, Washington, have organized and will cooperatively market through the Northwestern Fruit Exchange at Seattle.

"Washington is organizing for the production of a greater grain crop than ever grown in the state," is the report of Grain Inspector Sweeney of Tacoma.

Seattle, Washington, recently received a half carload of eggs from Japan. They were, however, silkworm eggs, and sufficient for the foundation of a great industry.

It is now estimated that 25 to 40 per cent of potatoes held in cellars and Eastern storage generally are destroyed by the extreme cold which has prevailed this season.

The supply of Pima cotton seed grown in Arizona is not sufficient to meet the present season's demand, and proportionate allotment is made to various growing sections.

A conservation dam on Sunday's River in South Africa is to cost a million and a half. The dam will be 92 feet high, 1200 feet long, and will have a capacity of 120,000 acre feet.

In the value of crop production in the states of the Union California ranks 10th with \$432,000,285; Washington, 29th, with \$140,000,000 production; Oregon, 32nd; Montana, 35th and Idaho, 36th. Illinois is the first state of the Union with \$842,000,000 production.

## Reliance Irrigation Meter

For Open Ditches, Reservoirs and Gravity Pipe Lines  
The Reliance Meter is recognized by water companies and irrigators to be the most accurate and impartial method of measuring water. Send for Copy of the Water Watch  
Hydrometric Co. 955 North Main St. Los Angeles, Cal.

will not cause endless trouble and family dissension.

Upon a close examination in conjunction with the decided cases I could easily find a few more things that are the matter with the form proposed, but I have taken only the written law in the Code about which there can be no possible question.

I have had from time to time inquiries such as this come to me and have turned them down just simply for the reason that I know of no document which it is more essential to employ an attorney and a good one to draw than a will. There is no instrument which so absolutely requires to be tailor-made and made by a good tailor fitting the circumstances of the particular case itself as does a will. And it has been my experience that there is nothing like an estate or a poorly drawn will so provocative of the most bitter dissension among families. I have personally profited in several instances through home drawn wills, wills taken out of books, and wills drawn by real estate agents who had a commission as notary public. Therefore, please be assured that it is not through lack of attention or a desire to take from my brother attorneys a profitable line of business that I have refrained from answering such questions, but rather the reverse.

## BEAN PRODUCTION IN CALIFORNIA IN 1917

By E. E. Kaufman, Field Agent, United States Bureau of Crop Estimates

Owing to the importance of the bean crop as a source of food supply, together with the large increase in acreage and adverse weather conditions at harvest time in some of the bean growing states, the bureau of crop estimates, United States department of agriculture, conducted a special bean inquiry during January as a check against its estimates of bean production of December, 1917.

No material change was noted in California, the inquiry practically confirming the previous estimate. The total area of beans harvested was 558,000 acres, 140,000 acres being Limas and 418,000 acres of all varieties other than Limas. On account of excellent weather conditions during the harvesting and thrashing season the average quality was high and the average "pick" (trash, immature beans, gravel, dirt, etc. removed by the cleaners) was 4.3 pounds per hundred.

The average yield of all beans is estimated to be 870 pounds per acre and the total production by varieties in cents or 100 pound sacks as follows:

Limas .....	1,244,000
Large whites .....	610,000
Small whites .....	800,000
Red kidneys .....	20,000
Pinks .....	1,200,000
Blackeyes .....	300,000
Cranberries .....	150,000
Red Mexicans .....	135,000
Bayos .....	125,000
Teparies .....	100,000
Henderson Bush .....	116,000
Miscellaneous .....	60,000
Total .....	4,860,000

## LONG STAPLE COTTON

Arizona is rapidly making a record as a producer of long staple cotton. The planting the coming season will doubtless be by far its greatest. As to quality it has been said "All the world knows that Arizona produces the finest long staple Egyptian cotton." The last crop is now harvested. The Pima variety will undoubtedly be planted as far as the seed supply will permit inasmuch as this variety has a longer, finer and stronger staple than the Yuma variety which was the first improved strain. Egyptian cotton has been planted with considerable success in Colorado Valley and near Yuma this year also and bids fair to hold its own in that district in time to come.

The Imperial people are depending almost entirely on the Durango. Why not the Pima? Conditions are practically the same as in Arizona.

## Pull Out This Avery Inner Cylinder Wall

THE inner cylinder walls of a motor are subject to more wear than about any other part of a tractor. In Avery Tractors these inner walls are separate castings. When worn or scored from any cause you can replace them at a small cost, with little trouble and practically no delay.

Other tractor motors must be taken out of the frame and sent to a machine shop to be rebored, reground and fitted with oversize pistons, which means heavy expense, much work and long delays, or a complete new cylinder must be purchased.

When you have an Avery Tractor you can also adjust the crankshaft boxes which cannot be done with any other tractor. No need of tearing the motor down and rebabbiting the boxes when they wear a little, as they are bound to do on every tractor.

You can burn kerosene too, and more successfully than in any other tractor. The Avery Duplex Gasifier does the trick. No other tractor is equipped with it. Avery's are the tractors that burn ALL the kerosene.

### Write for Free Avery Motor Farming Book

Get all the facts about the Avery Line of Tractors. They have many other superior features. They are built in sizes to fit every size farm—six sizes from 5-10 to 40-80 H. P. Also learn about the Avery Two-Row Motor Cultivator—the newest successful Motor Farming Machine built. There's also an Avery Plow and an Avery Thresher to fit every size Tractor. ### "The Best Managed Sale I Ever Attended"

is what a prominent breeder from out of the state remarked after the Guaranty Sale at Sacramento.

We give to every sale, big or small, the same efficient service that won the approval of the breeder above quoted, a service backed by an equipment and organization that has already brought about a new order of things in public sales of registered livestock in California.

If you want to sell your whole herd or consign high class animals to a consignment sale, let us go over the matter with you.

## Breed Leaders

Every breed of livestock has its outstanding character the same as the human kind. A great dairy cow has proved her ability to produce anywhere up to 15 tons of milk annually; the trotting horse has secured his record around two minutes; the beefmaker has shown his ability to make the least amount of feed into the greatest amount of food; swine, sheep and others of the livestock family have shown themselves great characters. In addition—and here is where their worth is proven—these animals can transmit their productive power to their offspring.

Beginning with the issue of August 4 the Cultivator gave an account of Pieterje Bloom of the university farm dairy herd. Some things she has done and more that her daughters have done were chronicled. She was a most worthy leader in this series of articles. Others of her kind follow. More of the "handsome is as handsome does" type of animals will be given in the columns of the Cultivator during the next few months.

Written for California Cultivator By C. A. Briggs

### AMES' RIVAL 70TH

HIS gentleman with the pleasant smile is His Royal Highness, "Ames' Rival 70th 209-850" now nearly four years old, an almost perfect type of Berkshire boar and a grand specimen of hog of any breed, one that any breeder would be proud to own. He

have placed on him fearing the effect on his extremely valuable breeding powers. His winning second in his working clothes in this hotly contested class and a decision of first at the Chico spring fair, gives a line on his show ring quality. His breeding is of the best, Premier, Masterpiece, and Baron Duke ancestors giving him some of the best blood of the breed in

Ames Rival 70th

belongs in the Cultivator department of "Breed Leaders." He was farrowed on March 6, 1914, bred by Rookwood Farm Ames, Iowa, sire Baron Matchless 50th, dam Rookwood Lady 43rd. That the judges consider him good is shown by the fact that he won second at the Sacramento State Fair in 1917 in close and hot competition. His friends, and they are many, all think he would have walked off with the "blue" if he had carried a little more fat, which his owners, the James Mills Orchard Corporation refused to

both male and female lines of his ancestors. Weighing 950 pounds, without fat, doing his duty as senior herd sire, with a back that never breaks no matter what the position of his head, which is of true Berkshire type, with a frame and bone capable of carrying 1250 pounds or more, right on his toes, active, able to walk a mile without puffing, splendid hams, broad back, fine shoulders, heart girth and lung power almost ideal, and, best of all, dozens of big litters of strong, active pigs that look just like him. Surely he is one of the leaders of his breed.

## Bridgford Holsteins Continue Their Good Work

The splendid registered Holstein cows and heifers that make up the foundation of the Bridgford Company herd at Knightsen are fully justifying the richness of their breeding under official test. A number of unusually good official records have been reported in the Cultivator recently, and this week brings news of still others.

The junior two year old, Bessie Vee-man Korndyke, granddaughter of the \$50,000 bull, King Segis Pontiac Alcarra, has 24.01 pounds butter from 493.2 pounds milk to her credit in seven days and is still on test with prospects for a great 30 day record.

The junior two year old, Rose De Kol Cande, daughter of Governor Walker 2nd, has to her credit 23.26 pounds butter from 413.3 pounds milk in seven days and is still on test.

Tidy Abbekerk Korndyke, another junior two year old whose credit of 18 pounds butter in seven days was noted in a previous issue, finally increased to 20.46 pounds butter from 376.3 pounds milk in seven days, and will have around 85 pounds butter in 30 days.

Sarah Topsy De Kol, a five year old daughter of King Pontiac Topsy, has

32.40 pounds butter from 701.1 pounds milk to her credit and is still on test.

Mercedes Inka Hengerveld, a seven year old cow sired by a son of Hengerveld De Kol and out of a daughter of King Segis, completed a record of 34.09 pounds butter from 699.2 pounds milk in seven days.

These cows and heifers are a remarkable group of individuals, and show a most pleasing high average milk flow in connection with their splendid butter records.

### AYRSHIRE FRENCH PRIZE CUP WINNERS 1917

The award of the French prize cups for 1917 offered by Miss C. A. French of Boston for the Ayrshire cows making the highest record in each of the seven Ayrshire Advanced Registry Classes has just been announced. Among the winning animals we note some belonging to Pacific Coast breeders:

Senior four year old, Willowmoor Happy Girl C, owned by J. W. Clise, Redmond, Washington, record 16478 pounds milk, 650.40 pounds fat; junior four year old, Willowmoor Vesta 4th, owned by E. B. McFarland, San Mateo, record 17,753 pounds milk, 753.18 pounds fat; junior three year old, Willowmoor Lily 5th, owned by J. W. Clise, record 14,577 pounds milk, 662.53 pounds fat.

## McAlister & Son Open Season With Good Records

The season's official testing is well under way in the herd of registered Holsteins owned by McAlister & Son, Chino, with some very nice records already completed.

They have the distinction of making the first 30 pound record on any cow sold in the Guaranty Sale last December and have made two records above 30 pounds on cows bought in that sale. First they increased the record of Miss Pontiac Nudine of Springvale, bought from Bridgford

Xatasso Mechthilde, 23.73 pounds butter from 532.4 pounds milk in seven days as a senior three year old, and she is a daughter of the 28 pound cow Cristeria Overton Mechthilde 3d; V. S. O. Burke, mature age, 25.33 pounds butter from 440.1 pounds milk in seven days; Orndyke Duchess Korn-dyke, mature age, 27.83 pounds butter from 710.5 pounds milk in seven days and 112.86 pounds butter from 3002.1 pounds milk in 30 days; Allenvail Cornucopia 2nd, junior three year old,

Ontario Blond Pietje

With record of 30.07 pounds butter from 590.2 pounds milk in seven days at four years of age. Bought by McAlister and Son at the 1917 Guaranty Sale.

Company, to an even 31 pounds butter in seven days from 575.2 pounds milk. Then the great heifer Ontario Blond Pietje, bought from Fred W. Kiesel, made 30.07 pounds butter in seven days from 590.2 pounds milk, milking 98 pounds her best day, as a junior four year old.

Other records completed include the senior three year old Lady Briems Aaggie 2nd, 31.48 pounds butter from 566.5 pounds milk in seven days, 119.34 pounds butter from 2478.4 pounds milk in 30 days; Neva Segis De Kol, 24.58 pounds butter in seven days as a four year old; Allenvail Segis Walker, 22.67 pounds butter in seven days as a four year old; Cristeria

24.03 pounds butter from 570.3 pounds milk in seven days; Minnehaha Gerben Korndyke, senior 325.84 pounds butter from 433.5 pounds milk in seven days; Canary Fanny Pauline 2nd, five years, 25.28 pounds butter from 546.8 pounds milk in seven days; Lottie Korndyke De Kol Segis, mature age, 27.07 pounds butter from 552 pounds milk in seven days; and Inka Wayne Pietertje Beets, six years, 23.21 pounds butter from 592.7 pounds milk in seven days.

There are some very promising cows and heifers nearing freshening time in the McAlister herd, among them a great two year old that looks fit to do something really sensational when she goes on test.

## Kings County Poland-China Sale

Written for California Cultivator By C. A. Briggs

**P**RECEDED by one of Kings County's celebrated banquets where the breeders and their friends were the guests of that royal good-fellow, Will Bernstein, the sale of 65 head of the best of the Kings County's herds began at 11 a. m. February 20 in the Sales Pavilion of the County Fair Grounds.

Heavy rain the preceding night and morning of the sale prevented many buyers from being present, but a large crowd was on hand to greet the auctioneers, Col. Ben A. Rhoades and his son Harold from Los Angeles. Will Bernstein managed the sale and his box work was of a high character. Farmer prices ruled and much of the stock went into hands where it will do great good. Many farmers from Kings and surrounding counties were brisk contestants for the fine sows offered. Several boys entered the ring and captured fine animals for their pig club work.

The average price was \$85, which shows an increase over the previous sales. The "topper" was "Call Best," a splendid sow consigned by John M. Bernstein that went for \$300.

A feature of the day was the patriotic response to the offer of M. Bassett who gave a fine sow for the bene-

fit of the Kings County Red Cross. Nine hundred and fifty dollars was obtained for this sow and the Red Cross purse of the county receives this much needed aid. The sale was a success in many ways and in the much needed fight for increased pork production Kings County will do its part.

### MONEY IN HOGS

Perhaps not everyone can make money in hogs. A. J. Lovejoy is enjoying California climate, as he has for several winters which he has spent in Pasadena. One understands that to spend winters in Pasadena calls for the sale of several hogs, but Lovejoy has bred Berkshires since 1876 and has been a great factor in the upbuilding of that breed, hence the prosperity to which he is entitled. He still has to talk hogs, even while resting, and recently called at the Cultivator office to remark that California has some exceptionally fine Berkshire blood. That this was not empty compliment is shown by the fact that only a few weeks ago the Cultivator chronicled the purchase by Mr. Lovejoy of one of Laurel's Champions' finest offspring, Violet's Champion, which Mr. Lovejoy has secured from the Fontana Ranch and sent back to his Illinois farm. Mr. Lovejoy now says that this was surely the finest specimen of Berkshire hog he has even purchased. Mr. Lovejoy attended the Berkshire Congress and sale at Davis last week.

## THE NEW DE LAVAL CREAM SEPARATOR

Every Reflection Shows Perfection

**V**IEWED from every angle, the De Laval is distinctly in a class by itself. It has a business-like appearance. It looks as if it were well made, and it is. It looks sturdy, and it is. There is no make-believe about it anywhere, from the wide-spreading substantial base to the solid, seamless, symmetrical supply can.

It's no wonder that big dairymen and creamerymen who have for years made a careful study of dairy methods and machinery refuse to consider any other separator but the De Laval. They know that from every angle—clean skimming, ease of operation, freedom from repairs, durability—there is no other cream separator that can compare with the De Laval.

They know that it has a record of 40 years of service behind it. They know that it can be depended upon. They know that they can't afford to take chances with any other cream separator—

And neither can you.

Order your De Laval now and let it begin saving cream for you right away. Remember that a De Laval may be bought for cash or on such liberal terms as to save its own cost. See the local De Laval agent, or if you don't know him, write to the nearest De Laval office as below.

## Stock Raisers Planning for Feed

Live stock men of San Luis Obispo, San Benito, Monterey, Tulare and Fresno Counties, and of many other sections are turning in every direction for new pastures or for some form of feed which will keep stock alive and if possible fit for market. The live stock men have been met by an official party comprising L. A. Nares, president of the California Cattle-men's Association and a member of the California branch of the federal food commission; Prof. Gordon H. True of the live stock department of the University of California and of the food commission; C. E. Rachford, head of the forest service grazing department, and forest supervisors of various districts. Live stock men from Tulare and nearby counties met at Porterville and Visalia. Also in connection with the same effort to secure feed a meeting was called at Fresno for last Thursday. A line has been secured on hay supplies, and if transportation can be arranged the stock will be brought to the hay or the hay taken to the stock. Live stock men propose to do their bit by making into food that which would surely be wasted if action were not taken.

At the Fresno conference Will Blasingame was named as chairman and H. E. Patterson secretary, C. E. Rachford, assistant district forest supervisor, of San Francisco, presiding during the organization of the assembly.

The following resolutions were passed:

Whereas, We are experiencing the most serious lack of rain since 1877; and

Whereas, The stock of all kinds is in almost a starving condition, and the loss already serious, and in that hay is very scarce and the price so high on the small amount still on hand that stockmen cannot pay the price

without bankruptcy; now, therefore be it

Resolved, That we respectfully request the government authorities to intervepe to save the stock of the San Joaquin valley from almost total loss; and be it further

Resolved, That we request the government to permit the stockmen of the San Joaquin Valley to use the national parks and forest reservations, under proper regulations, for the summer of 1918.

Commissioner Nares said:

"Europe has killed 40,000,000 head of stock above her normal supply.

"America has promised her allies that she will supply 70,000,000 pounds of beef per month, whereas the normal supply before the war was 1,000,000 pounds. We must furnish 100,000,000 head of stock during the year, as opposed to 10,000,000 during the normal years.

"The food administration now knows the location of all feed supplies and has endeavored to stabilize the price. There is practically no feed now in the Imperial Valley, as trainloads of stock have been shipped in there and the supply now is very short."

He also stated that there is hay available in the Sacramento Valley at \$22 and \$28 per ton and lists of holders of this feed will be furnished all cattlemen needing hay. The administration also wants information of any banks refusing loans to cattlemen for the purpose of purchasing feed or for the moving of stock. Some complaints have already been made along this line.

In order to ascertain conditions of field and foothill pasture sections the chairman appointed the following committee to act with District Forest Supervisor Benedict: L. A. Blasingame, H. E. Patterson, F. Elgorrago and Fred McKenzie.

The findings of this committee will be placed in the hands of the food administration.

## Producing Certified Milk

**T**HE winner of the first prize over 20 competitors, producers of certified milk, at the National Dairy Show was a West Virginia dairyman who produced the milk at a handsome profit, which is contrary to the results secured by some "certified" and "guaranteed" producers.

Regarding the methods of production Hoard's Dairyman says:

The methods used by the Hill Top Farm are such that a sample tested at the National Dairy Show showed only 1,100 bacteria to the cubic centimeter.

### Cleanliness in Production

Cleanliness in production among the 80 or more Ayrshire cows on Hill Top Farm begins in the selection of the cows, as none but home bred animals are ever sent into the dairy barn. All the heifers are raised on Hill Top and thus the chance of introducing inferior and diseased live stock is reduced to a minimum.

Cleanliness in the stables is kept to the maximum by cleaning the gutters, scrubbing the floors, and washing the walls each morning. This is done by the milkers after the morning feeding and milking is finished. In the wintertime the cows are turned into a protected barn lot while the scrubbing is done. Plenty of water under pressure with stiff, wide brooms makes the cleaning process easy and efficient. \* \* \*

The manure is carried by a litter carrier to a concrete pit outside the

dairy barn but removed each day to the fields during the summer and three times a week during the winter. Screens over all the stable windows and tight screen doors prevent any scourge of flies in the barn during the summer.

Although housed in a frame barn, sanitary conditions are further enhanced by the walls and ceiling being constructed of a metal lath covered with a smooth, rock-face plaster; this can be scrubbed and washed quickly and easily with water and also aids in keeping a uniform temperature in the barn.

### Milking Operations

Milking on Hill Top Farm is done with machines which reduce the labor to such an extent that four men are able to feed, milk, and keep the stable sanitary for 80 cows. Milking begins promptly at 4:30 each morning and evening and is finished by 6 o'clock. During the milking period no feeding is done and all the dairymen change their barn clothes for one-piece white uniforms. This eliminates the danger of dirt getting into milk from soiled clothes. Before the cows are milked their udders are washed with an odorless disinfectant and wiped dry. The stripping is done in partially covered buckets. Care is taken to have the milking machine buckets and teat cups in good operation so that the cups may never fall while the cow is being milked.

Because the cow's udder and flanks are kept closely clipped but little dirt

can accumulate on the hair and what does stick is taken off when the udder is cleaned prior to milking or when the cows receive their daily cleaning.

#### Handling the Milk

Just as fast as the teat cups are removed and the stripping is finished the milk is started through the cooler. This is operated in connection with a brine tank and a pump so that the temperature of the fresh milk is reduced to 40 degrees F., as soon as it passes through the cooler. From the cooler it drains into the bottling tank; this tank is always covered and the bottles are filled as fast as the milk drips away from the cooler.

One man operates the bottler while another keeps the capping machine going. Thus the milk is sealed in air-tight bottles at a temperature of 40 degrees within a few minutes after coming from the milking machine.

"This operation we believe to be one of the most important in the production of certified milk," says Russell L. George, manager of the farm. "Of course we take every precaution in the barns to keep any dirt from getting in but quick cooling prevents the growth and development of bacteria that get in despite care." The bottles are placed in crates and set in a refrigerator until hauled to market.

The caps placed on the bottles are of the overhead type clamped to the rim of the bottle by a steel wire. The electric capper automatically cuts the caps out of a paraffined roll from the under side. This prevents any particles of dust from touching the under part of the cap. The day the milk is to be sold is stamped on the cap.

Usually two men are needed to operate the creamery but the assistant to the dairyman helps with the milking and after milking assists in washing the bottles. Two men are needed during the bottling and capping operations. The work of testing and handling the 200 gallons per day, the average production, is done largely by the dairyman.

Following the evening's and morning's milking all the utensils used in handling the milk, including the milking machine buckets, are thoroughly washed and then sterilized under steam at 190 degrees for one hour. The sterilizer holds all the utensils and the bottles for one milking and is situated between the washing and bottling room, a door entering it from both rooms. When the washing is completed all the utensils are placed on a portable tray and shoved into the sterilizer; they remain there until ready for the next milking. The rubber tubes of the mechanical milkers are not placed in the sterilizer as the heat will destroy these connections; they are kept in a solution of disinfectant.

A portion of the milk produced is separated and the cream sold as a certified product; the skim milk is then used for feeding calves. The certified milk and cream are sold in pint and quart containers. All deliveries are made to a retailer one mile from Hill Top in a 1½-ton motor truck. The bottles are handled in wooden crates.

Three trips a day including one after the evening milking are required to deliver the products but the return trips are utilized in hauling ice, feed, and other materials necessary to the operation of the dairy. One driver for the truck is required for the marketing end but a part of his labor is contributed to the operating end of the dairy by the return trips.

#### Division of Labor

The labor requirements for the

farm are divided as follows: four men in the stables, one of these assisting the dairyman after milking hours; one dairyman, one truck driver, and two horsemen who do the teaming about the dairy other than at harvesting time. During the growing season extra help must be secured to work the 200 acres of growing crops of alfalfa and corn. Practically all of the other 500 acres on Hill Top are used for pasture.

Certified milk from Hill Top is sold wholesale for 18 cents a quart and 9 cents a pint; certified cream brings 80 cents a quart and 40 cents a pint. This is not as high as the average price now secured for certified milk the country over, as 22 to 24 cents per quart is usually paid. Certified milk, like practically all other grades of milk, is hardly bringing what is necessary to maintain production and

give a fair profit to the producer, dealer, retailer, etc. But even considering the unusually high operating expenses and abnormal times, dairy

operations at Hill Top are making a profit, especially when the production of record cows and the accumulation of breeding stock is considered.

## Hog Conference at Willows

Written for California Cultivator By H. Stinger

At the hog conference held in Willows Saturday, February 9, 125 farmers from all parts of Glenn County listened to the appeal of the national food administration through its representative, C. B. Cunningham, president of the State Swine Growers' Association. Professor Vestal of the University State Farm, Professor Madsen of the college of agriculture and Mr. Bohman of the Western Meat Company, and representative of the packing houses.

The meeting was first addressed by Professor Cunningham who pointed out the necessity of more hog production in California and showed to the people that in order to make profit on swine in the present situation they must raise pure bred pigs.

"Comparing our swine production with that of the Eastern states, our hogs show an inferior quality of three per cent as compared with those of our Eastern competitors. This difference is due largely to the lack of a

**\$40 alfalfa hay predicted for 1918-19!**

**NOTE**  
Market price of alfalfa today is \$32 per ton (baled) in carload lots.

**Plant**

**GERMAIN'S SELECTED ALFALFA SEED**

**Now!**

Oat hay is now \$38 a ton and barley hay \$36—and there's practically none in sight throughout California for the future. The war and climatic conditions have boosted prices to the sky—and they're there to stay for a long time. The wide-awake rancher sees the handwriting on the wall—he is taking time by the forelock—he is *planting alfalfa*. And he will put away thousands of dollars when alfalfa hay hits the \$40 mark. Plant Germain's Selected Alfalfa Seed NOW and insure your profits. If you plant Germain's HAIRY PERUVIAN ALFALFA seed you'll harvest 2½ more tons to the acre than with the common variety of seed. Place your order with us immediately and avoid disappointment. Don't wait—plant NOW!

## At Public Auction

We will sell at public auction to the highest bidder absolutely without reserve or limit the entire herd of breeding age owned by R. F. Guerin, Visalia, Cal., on his farm, on Thursday, April 4, 1918.

The offering will consist of 80 head, over 70 being females practically all of which are bred to Sir Veeman Korndyke Pontiac, 30 pound son of Sir Veeman Hengerveld, who will himself be sold.

This will be a rare opportunity to secure good foundation animals, great young cows and heifers in calf to one of the best bred bulls in the west today.

Some of the attractions of the sale will be:

**FOUR DAUGHTERS OF WINIFRED HOTALING**, dam of Winifred Hotaling 2nd, 33.92 pounds butter in seven days, and Winifred Hotaling 3d, 32.19 pounds butter in seven days.

**TWO DAUGHTERS OF A 27.42 POUND FOUR YEAR OLD**, that milked 680.1 pounds in seven days.

**A DAUGHTER OF SPRING FARM KING PONTIAC 6TH** whose two year old daughters are making splendid records.

**A GRANDDAUGHTER OF KORNDYKE QUEEN DE KOL'S PRINCE** out of a 21 pound four year old granddaughter of King Segis.

**A BEAUTIFUL 20 POUND COW** and her three daughters, one of them a 22.27 pound three year old.

**TWENTY-NINE DAUGHTERS OF ARCADY PONTIAC WAYNE HENGERSVELD**, whose 27 A. R. O. daughters with records up to over 28 pounds butter in seven days comprise the largest list of daughters of one sire yet developed in California.

**THIRTEEN GRANDDAUGHTERS OF JUDGE HENGERSVELD DE KOL**, whose 41 A. R. O. daughters have records up to 34.19 pounds butter in seven days and 1227.46 pounds butter in one year.

**TWENTY-ONE COWS AND HEIFERS** with official records up to over 24 pounds butter in seven days.

**SIXTY-FIVE COWS AND HEIFERS** in calf to Sir Veeman Korndyke Pontiac, the only son of the great Sir Veeman Hengerveld on the Pacific Coast, and he is out of a 30 pound dam of splendid breeding.

## BULLS

**SIR VEEMAN KORNDYKE PONTIAC WILL BE SOLD.** He is by Sir Veeman Hengerveld, universally acknowledged one of the very greatest sires of the Holstein breed. His dam has an official record of 30.13 pounds butter in seven days, and she is out of a 29.88 pound four year old daughter of Sir Veeman Hengerveld and is sired by Sir Korndyke Pontiac Artis, whose dam, Pontiac Artis, made 31.71 pounds butter in seven days, 1076.91 pounds butter in one year and is a daughter of the great Hengerveld De Kol.

**REMEMBER** that Mr. Guerin is selling his entire herd except about 30 heifer calves from Sir Veeman Korndyke Pontiac which he will raise and develop as his female breeding herd.

**REMEMBER** that 65 cows and heifers in this sale are bred to Sir Veeman Korndyke Pontiac, and he is just now three years old. **THAT MEANS** that in all probability Sir Veeman Korndyke Pontiac will have at least 60 living daughters before he is four years old. Figure it out yourself and then determine to buy him if you want a herd bull that is bound to have one of the best lists of A. R. O. daughters in the west.

**A SON OF SIR VEEMAN KORNDYKE PONTIAC** out of a 28 pound four year old.

**A SON OF SIR VEEMAN KORNDYKE PONTIAC** out of a 27.42 pound cow that milked 680.1 pounds milk in seven days.

**SEVERAL SPLENDID YOUNG SONS** of Sir Veeman Korndyke Pontiac and Judge Hengerveld De Kol 6th out of good dams.

Every animal in this sale is guaranteed to be a breeder, has been tuberculin tested, and is sold subject to tuberculin retest by the buyer.

Catalog in preparation. Write for one.

# SPECIAL!

We offer three splendid young bulls, ready for service, at prices any dairyman can afford to pay for even bulls of less quality.

**No. 1—KING MEAD OF RIVERSIDE 4TH.** Born October 19, 1916

Sire—King Mead of Riverside.

Dam—Nydia Creamcup Walker.

He is that wonderful combination, a son of King Mead of Riverside out of a daughter of Prince Gelsche Walker. The dam made 432.4 pounds of milk and 18.18 pounds butter in seven days as a senior two year old, and is out of Nydia Creamcup, daughter of Ignaro De Kol, who made 21,504.3 pounds milk and 926.35 pounds butter in one year. This bull is a nice straight individual, more black than white. Price \$350.00.

**No. 2—KING KORNDYKE PONTIAC 22ND.** Born March 16, 1917.

Sire—King Korndyke Pontiac.

Dam—Woodcraft Gem Cornucopia.

Here is a choice young grandson of King of the Pontiacs, and by the same sire as the highest priced calf ever sold on the Pacific Coast. The dam has official records of 24.05 pounds butter from 635.50 pounds milk in seven days, is a persistent producer and a most promising candidate for better than a 30 pound record. Her sire is a grandson of Hengerveld De Kol out of a dam that made 33.76 pounds butter in seven days. This is a deep bodied bull, a good individual, about two-thirds white. Price \$300.00.

**No. 3—PRINCE GELSCHER WALKER PONDYKE.** Born December 29, 1916.

Sire—Prince Gelsche Walker.

Dam—Miss Blaney Pondyke.

Here is a son of Prince Gelsche Walker that is capable of improving almost any herd. His dam is by a son of King of the Pontiacs and made official records of 439.2 pounds milk and 21.52 pounds butter in seven days as a four year old. She is out of Miss Blaney, 1008.27 pounds butter from 20,740.30 pounds milk in one year, who is dam of Miss Dutch, 30.05 pounds butter in seven days, 1025 pounds butter in one year. This is a big, deep bodied fellow, now ready for light service. Price \$250.00.

Don't delay if you want one of these bulls, for the first check will claim the bull.

## A. W. Morris & Sons Corporation

Woodland, California

good breed of swine and also the mismanagement in the feeding of the hogs. Too much stress cannot be given to this one particular phase, especially if the farmers are going to get a profit out of the raising of hogs. At the present high cost of grain the farmer who does not balance his grain feeding with other ingredients such as alfalfa, tankage, coconut meal or some other supplement, will find that his hog industry is not showing a profit."

"Interbreeding of the swine will not bring such good results as the raising of hogs of one breed. But whether we raise pure bred hogs or whether we raise a cull hog, it is our duty as American patriots to raise as many hogs as our facilities will allow."

One of the present questions confronting the farmer of today is, "Can we raise hogs at a profit with the present high price of grain as compared with the present price of pork?" Professor Vestal, who has made a close study of the swine industry, says that without a doubt hogs are profitable today as they have been in the past for the farmer who raises his own hogs and his own feed. If however, the farmer must buy his hogs and his feed, then perhaps the swine will not prove so profitable an investment. In another instance, if the farmer buys his hogs and raises his feed, he can make a profit, provided he is a man of management.

In speaking of raising feeds Professor Madsen, whose opinion has been based on several years experience with the University Farm at Davis, has showed to the people that they are getting just about one-half the use of their soils that they should get. "After the first crop is taken from the ground, namely grain, another crop can be made to mature if the ground is immediately plowed under and a crop of sorghum seed planted. Under districts where irrigation is possible an excellent feed crop for hogs is the cow pea, which is very easily grown and which contains a large percentage of protein."

In comparing our Western market with the Eastern markets we are somewhat at a disadvantage owing to the lack of transportation and the difference in the quality of hogs.

Two kinds of hogs are sold to the packing houses. One is called a shipping hog, or a hog weighing anywhere up to 150 pounds. This hog is too small for a packing hog so is sold as a shipping hog, necessarily bringing a lower price than the packing hog. By the term packing hog we mean a corn fed hog weighing from 180 to 250 pounds, and it is from these hogs that we are able to get our hams and bacon. But of the greatest losses to the nation possibly none is so great as the piggy sow that has been put on the market for pork. The United States government requires all piggy sows to be held until after the litter has been born, and as very few of the packing houses have the means of raising these little pigs they are killed as soon as they are born. The people do not realize the enormous loss that is incurred in this way, but if in the future this one item can be overcome the government's pork supply will be greatly increased.

The James Mills Orchard Company in Glenn County should be congratulated on the showing it will make this year. Twenty-eight carloads of prime packing hogs will soon be shipped from this ranch, leaving about 2000 pigs still to be considered. This ranch is figuring on a profit of approximately \$50,000 for these pigs,

showing that hogs and feed, both raised on the farm, is an exceedingly profitable enterprise.

This conference has been the means of starting a hog movement in Glenn County which will increase the hog production at least 2000 more hogs for the coming year. If every county in California increased its hog production at the same rate this state would be leading the swine production instead of following along in the rear.

# Western Berkshire Congress and Sale

Written for California Cultivator By W. S. Guilford

**BIG** attendance of interested farmers and breeders, a program full of interesting things, and a sale of 43 animals averaging \$165—that is the story of the 1918 congress held February 21 and 22 at the University Farm, Davis.

Officers were elected as follows: W. M. Carruthers, Mayfield, president; A. B. Humphrey, Escalon, vice president; Homer Hewins, Calistoga, secretary. Executive Committee consists of Frank Brush, Santa Rosa; Paul Foster, Hopland; J. S. Badt, Wells, Nevada; James Mills, Hamilton City; Harry Murphy, Perkins, and F. R. Steel, Grant's Pass, Oregon.

A judging contest for farmers and farmer's wives was an important feature. Mrs. A. E. Slocum of Willows won first; H. S. Howard, Orland, second; E. P. Smith, Paramount, third; R. C. Gruhlke, Dixon, fourth; H. A. Houston, Chico, fifth; A. E. Slocum, Willows, sixth. The prizes were registered pigs donated by Homer Hewins, Jr., Calistoga; A. B. Humphrey, Escalon; F. R. Steel, Grant's Pass, Oregon, and Butte City Ranch, Butte City.

An interesting feature was the banquet, ably presided over by James Mills. L. E. Frost, editor of the Berkshire World made a strong appeal for more pork—the nation must have it. He is in touch with the food situation over a wide territory and has been in constant communication with the food administration. Other speakers were E. H. Grubb, A. J. Lovejoy, W. M. Carruthers, A. B. Humphrey, Dean Van Norman, Prof. True, Robert E. Jones and J. L. Thatcher.

It was voted to make Davis the permanent location for the annual meeting.

### RED CROSS PIG AT BERKSHIRE CONGRESS

The pig donated by the breeders of the Western Berkshire Congress, to be sold for the benefit of the Red Cross, brought altogether \$330. The pig was won first by one of the breeders in a \$120 pool and then turned back again for auction, being sold nine times, and each time being returned. The auctioneer himself, bought the animal once but refused to keep it. The tenth and last time it was sold to F. A. Bush of Santa Rosa for \$50.

### PROTECTIVE ASSOCIATION FOR HOG PRODUCERS

Davis, Yolo County, February 21.—At a meeting of the Western Berkshire Congress today on the University Farm, a committee was appointed to confer with the other breeders' associations for the purpose of forming a protective association for hog producers. The next meeting will be held in conjunction with the Liberty Livestock Show at Los Angeles, although the sale will be held as usual at Davis on the University Farm.

## Come to Stanislaus County for Registered Holsteins

STANISLAUS COUNTY LEADS

All counties of California in number of herds of registered Holsteins and number of 30 pound sires in service.

### Registered Holsteins

Young sons of Prince Hiske Walker out of A. R. O. dams for sale.  
H. E. Cornwell, Rt. B, Box 183, Modesto, Cal.

### White House Holsteins

A well bred proven herd sire for sale, also a few bull calves.  
A. M. Sibens, Rt. 1, Box 307, Modesto, Cal.

### Creamcup Holsteins

Burke. A few young bulls for sale.

Headed by the 33.92 pound bull Creamcup Champion Pontiac  
M. HOLDRIDGE, Rt. B, Box 346, Modesto, Cal.

### Sylvan Iris Holsteins

Headed by a son of Dutchland Sir Pietertje Creamelle. Well bred young bulls and a few registered heifers for sale.  
E. F. Young, Rt. B, Box 174, Modesto

### Pelandale Holsteins

Headed by Hazelwood Mercedes Posch Ormsby. Good young bulls and a few registered cows for sale.  
J. A. Pelanda, Rt. B, Modesto, Cal.

### Segis Pontiac De Kol Dutch

Whose three nearest dams are 1000 pound cows that average over 30 pounds in 7 days, heads my herd. Bull calves for sale.  
E. E. Freeman, Rt. B, Modesto

### Registered Holsteins

Herd headed by a 36 pound grandson of Colantha Johanna Lad and a 32 pound grandson of Rag Apple Korn-dyke. My cows have won butter fat contests wherever entered. Young bulls for sale. Visitors welcome.  
J. W. Benoit, Rt. C, Box 183, Modesto, Cal.

**Thompson's Registered Holsteins**  
Service age grandson Winifred Hotaling 2nd, 33.92 pounds butter in seven days for sale. Also two bull calves, yearly record backing.  
Luther Thompson, Rt. A, Box 351, Modesto, Cal.

Our Senior Herd Sire is **KING KORNDYKE HENGVERD ORMSBY 7th**. Five of his sisters sold at public auction for \$23,800, an average of \$4760. This blood has made some of the world's greatest producers. Our junior herd sire is **TOYON KING KORNDYKE SOLDENE**, son of a 33.23 pound daughter of King Hengerveld Aaggie Fayne. Young bulls for sale. No females. **REGISTERED BERKSHIRE BOARS**, sons of the \$1500 boar Star Leader, for sale.  
**Kounias Registered Stock Farms, Modesto, Cal.**

## Stop Thinking! Act!!

supply is limited.

### Are You Going to Act in Time to Get One?

What a wonderful combination of producing and transmitting power is present in this son of the great Korndyke Queen De Kol's Prince and Tilly Alcartra, the only cow in the world that has produced over 40 pounds butter in seven days and over 1100 pounds in one year, and she is also the only 40 pound cow that has produced over 1000 pounds butter for two and three years.

And don't overlook the fact that **PRINCE ALCARTRA KORNDYKE** has already proven the power to transmit his inheritance, for his first five two year old daughters to complete yearly tests average 15.333 pounds milk and 675.92 pounds butter.

Write us for prices or come and see us NOW.

**The J. S. GIBSON CO.**  
Williams, Cal.

## Holstein Friesians

Herd of over 200 head to select from headed by King Mead Acme, whose dam, Sadie De Kol Acme, made 885 pounds butter in one year. We breed for high production and high testers. Will sell bulls that give satisfaction to the buyer and at reasonable prices.

**Frank Helm**

Fresno - - California

### HOLSTEIN-FRIESIAN CATTLE

From my herd of 75 registered Holsteins, can spare ten yearling heifers and heifer calves splendidly bred, closely related to 30 and 40 pound cows.

One bull calf, whose eight tested nearest dams averaged \$1 pounds weekly butter record.

One service bull from 29 pound dam. One hundred and two pounds milk one day. His two nearest dams through sire yearly record average 21,000 pounds milk and 812 pounds butter.

Write me for low prices and further information.

**Frank Reed Sanders, Mesa, Ariz.**

## Shorthorn Cattle and Berkshire Hogs

Shorthorn herd headed by Count Glory, 126982, Grand Champion at the California State Fair, 1916. Berkshire herd won Premier Exhibitor's banner at P. P. I. EL.

513 Hearst Bldg., San Francisco  
Carruthers Farms, Mayfield, Cal.

## TAGUS

### Holstein Friesians

(Officially Tested)

We offer for quick sale a mature registered bull for \$250 to first applicant.

Prices on application for breeding stock. Visitors invited to visit Tagus, just four miles north of Tulare.

(Dairy Dept.)

### Pacific States Corp.

Tulare, Cal.

H. C. MERRITT, Jr., Manager

### It is Not an Accident

when a bull sires a long list of high producing daughters when he himself is the result of many generations of matings of high producers, and such a bull is

### Dutchland Sir Pietertje Creamelle

whose sire is by Pietertje Hengerveld's Count De Kol and out of the great transmitting cow Changeling. His dam is a daughter of the former world's record cow Creamelle Vale, and is by a grandson of De Kol 2nd, the foundation cow of the De Kol family.

**DUTCHLAND SIR PIETERTJE CREAMELLE** now has 14 A. B. O. daughters, all records made in our herd, and he has had only a limited opportunity as our original herd of breeding cows was small. All of his daughters are heavy milkers with a normal high percentage of butter fat. His first daughter to freshen as a three year old made over 30 pounds butter in seven days. If you would breed better type into your herd, coupled with large milk flow and high butter fat test, secure one of the young sons of this sire that we now offer. Priced right.

**F. STENZEL**

San Lorenzo

California

## DEEP WELL TURBINES

No valves to pack or plunger rods to get out of order. For use in any well ten inches in diameter or over.

A complete line of irrigating pumps of all descriptions, horizontal and vertical for belt drive or direct connection to electric motor.

Prices as low as are consistent with good quality and workmanship.

## This Month in the Ornamental Garden

### Southern California

Written for California Cultivator

IF THERE is any Bermuda in the lawn it is reasonably sure to be brown and forbidding at the beginning of March, but with the magnificent rains, even it is greening up. The application of a bit of nitrate of soda or complete fertilizer will help it along. This might well be preceded by raking with sharp garden rake. This tears out the long runners and makes the lawn look very unattractive until the new growth starts, but it livens up the roots and gives the new fertilizer a chance.

The greatest dearth of flowers of all the year usually comes in November and December. This is a good month to look ahead and plan for the fall bloomers. Plant carnations, chrysanthemums, violets, and sow seed of asters, balsams, centaureas, dianthus, marigold, nasturtium, snap-dragon, sweet peas, and zinnias.

It is also a good month for transplanting asters, celosia, centaurea, calliopsis, salvia, Shasta daisy, verbena. A word about Shasta daisies. They sprang into wonderful popularity for a time after their improvement, and justly so, for they are easy of culture, very hardy and bear enormous crops. Once started, each plant will give dozens of offsets the next year.

Another plant which is worthy of general attention is rudbeckia, or golden glow. It is a late summer or early fall bloomer.

Plant deciduous shrubs, syringa, roses, salvia and all evergreens.

Irises, of the earlier varieties, are

now blooming and all of them may well receive an application of commercial fertilizer, a small handful to each clump. The Iris is worthy of more general planting.

Gladiolus is another popular bulb and some wonderful new varieties have been introduced within the past few years. One beauty of the glad is that it gives great increase in corms and enables liberal extension of the planting a second year.

Daffodils are now coming and ready for quick acting fertilizers. A complete commercial fertilizer, often sold in small packages as lawn fertilizer, is excellent for any of the flower beds, unless one has access to a large supply of fertilizer left over from the orchard or farm.

Also plant tritonia, Montbretia, callas, cannas, dahlias, tuberose, tigridias, caladiuns, etc.

Amaryllis, the true amaryllis of the belladonna type, is now having its spring growth and needs fertilizer and thorough cultivation. This beautiful flower comes in late summer and is a magnificent pink. The spring bloomers will also soon be coming and need encouragement of best fertility.

In shrubs and vines prune all of the early summer bloomers, unless perhaps it be the wistaria. These may be allowed to bloom first and have the pruning shears ready as soon as the blooming season is past.

Roses may be induced to give abundant early summer bloom by severe pruning and heavy fertilizing this month.

### Northern California

Written for California Cultivator By A. R. Gould

ALTHOUGH the work of first importance is in the vegetable garden and towards the national work of food production, we see no real

reason to abandon the work of producing flowers and beautiful plants which cheer the heart and banish sadness. This is the mission of the flowers, and it is as necessary to grow them and use them to cheer the wounded and injured as it is to supply food. Those who go to the extreme and advocate tearing up lawns, flower borders, etc. and the work of many years, while vacant lots and large areas held up by land speculators lie idle, are in the same class as those who do nothing. In England one or two of the ducal class plowed up some of the fertile parks owned by them and which for ages reared nothing but deer and pheasants. Recently this land has been turned to good account in raising crops, which is as it should be, and we trust it will from now on always be put to such practical use, but here in this wonderful climate we can continue to beautify our homes and also put a good section to practical economic use.

After these splendid rains we shall find the weeds moving, and we must also get busy sowing seeds, transplanting trees and plants, also completing our general planting schemes. The bulbs such as the snowdrops, crocus, freesias, narcissus and daffodils will now be at their best, and those who planted pansies, double daisy, winter stocks and primula polyantha will have these in flower now.

It will be necessary to keep a close watch for the slugs, especially where small plants have been put out. Where delphiniums have been planted the young tender shoots will be just coming through, and the slug is very partial to these. Night attacks on your part with the flashlight and hand picking will be the only effective measure.

#### Tulips and Lilliums

The Darwin tulips will now be through the ground and you can increase the size of your flowers this month by applying a good quick acting fertilizer. Work this in the surface of the soil around the bulbs. The Easter lilies will also benefit by such treatment as advised above. To those in pots a top dressing of half horse manure and half soil should be applied. Spray for green fly or aphid with Black Leaf 40.

#### Sowing Summer Flowering Subjects

We have to prepare a large box or wooden frame on a hot-bed, made up as advised for raising tomatoes, and placed in a warm situation. If an ordinary window sash or glass can be used as a cover, so much the better. Sow the seeds of the following in small boxes, covering the seeds very lightly with fine sand: Petunias, lobelia, ageratum, mimulus, nicotiana, nemesia, browallia and antirrhinum, or snapdragon. Sow the seed thinly and keep shaded and moderately moist.

#### Gladiolus

The summer flowering type of these should now be planted three inches

deep and six inches apart. The soil should be fairly rich. Among the best named varieties we would advise the following: America, large light, pink tinted, lavender; White Excelsior; Panama, large deep pink; Mrs. F. King, fine scarlet, often seen in florist's stores; Golden King, rich golden yellow; Baltimore, apricot pink; Peach, very delicate white; Afterglow, one of the very best and newest pinks; War, magenta, very large and Baron Jos. Hulot, the nearest approach to a blue that has yet developed.

#### Hardy Evergreen Flowering Shrubs

For general effect a few of the following will prove of value and add to the beauty of any garden. Kalmia latifolia, native mountain laurel with pale pink flowers; Andromeda japonica, flowers pure white resembling lily of the valley; Mahonia aquifolium, yellow flower, leaves change to a beautiful tint in the fall; and Cotton-

east Franchetii, bears red berries and has glossy foliage.

#### Charming Herbaceous Perennials

Massed color effects can be obtained by planting well established plants in groups of Oriental Poppies, Phlox decussata, Scabiosa caucasica, Helenium rubrum, and chrysanthemum maximum. Shasta Daisy, strong clumps of these can usually be secured from the nurseryman for planting now.

#### Shirley Poppy

If you have a good bed or border which gets all the sunshine you may have a wonderful array of coloring by sowing broadcast seeds of the beautiful Shirley Poppy. This is a very popular annual and originated many years ago in an English vicarage garden whence it is named. It is said to have developed among the red or cornfield poppies. It thrives in our state extremely well.

## This Month in the Vegetable Garden Southern California

Written for California Cultivator By D. F. Reichard

UR long wait has ended. The rain has come, and we are all happy. The long delay of the rain's arrival has been beneficial in many ways. It has given us time to get our ground thoroughly cleaned up, thus disposing of all rubbish that might harbor insects or fungus to attack this year's crops; to prune trees and shrubs and spray them without interfering with the garden that might have been and to loosen the dry earth and turn it up to the sun.

Turning the soil over in the dry state, summer fallowing, is an excellent tonic for it. The sun warms it and air circulates through it freely, both of which are remedies for sour soil and almost sure death to insect eggs that have been deposited to be hatched for the spring attack on the garden. So this dry winter has no doubt been a blessing to the extent of greatly reducing garden pests for the coming season, and with a little diligence everybody can easily keep the pests well under control if not wholly exterminate them.

With all in our favor, now the thing to do is to raise as much in our gardens as possible. It is absolutely necessary for the salvation of the whole world as well as our own country. If you are new at gardening or a recent arrival in the Southwest, get a catalog from our advertisers—they are full of reliable information—or write to us direct.

March will be our heaviest planting month as both hardy and tender stuff

may be put out. Make the soil ready for the seeds and plants by deep tillage. Sow seeds of the hardier vegetables such as carrots, beets, turnips, etc., for succession. The last planting of peas should be made by the middle of the month that they may make their growth before the long hot days come.

Plant Canadian and Ventura Wonder beans early in the month and any or all varieties the latter part of the month. As the ground warms up plantings of Heaths Early sweet corn, Klondyke cucumbers, muskmelons and watermelons, Fordhook or White Bush squash may be indulged in with comparative safety. Set out plants of early and main crop tomatoes and peppers; also sweet potatoes, cabbage and cauliflower may still be set out.

If any fruit or berry plants are to be put out they should be set at once as the warm weather will soon start them and then it is too late to get best results.

No doubt the total rainfall this year will be below normal so it behooves us to conserve moisture at every point. Plant all crops on the level instead of on ridges. Make furrows between the rows each time it is necessary to irrigate. Cultivate thoroughly after each irrigation or rain storm, leaving the garden as level as possible, with finely pulverized surface. Keep all weeds down; thin out all crops as soon as the plants are large enough to show character. At the first sign of insects or fungi get after them with the proper remedy. Black Leaf 40 and Bordeaux mixture should be always at hand for this purpose.

## Northern California

Written for California Cultivator  
By A. R. Gould

WE HAVE this year to use all our efforts, our spare moments, our vacant lots and home gardens to prove California can produce the goods.

Strategy in military tactics will prove a winning factor in the war, but equally as important is strategy in food production and conservation. We have been favored with some splendid rains already and indications are that we may hope for late rains which will carry our crops along half way through the season, and we shall be

**"Barclays Barred Beauties"**—Grand exhibition cockerels, cocks and eggs. G. S. Barclay, R. A. Lindsay.

## HOGS

**The Billiken Brand of Chester Whites**—There is right now a big shortage of swine in California. The output of 1918 will show even a greater shortage unless the farmers of this state get busy and raise more hogs. Good breeding stock is scarce and hard to get. **THE BILLIKEN BRAND** represents the best obtainable; they are of that mellow type that mature early and are such satisfactory easy feeders. Get started with this strain and help out the Food Administration and your own pocket as well. Write me your wants—do it today. I can still furnish first class animals at reasonable prices. C. B. Cunningham, Mills, Cal.

**Grape Wild Farm Berkshires and Guernsey Bull Calves**—Only a few more hogs left from 6 months to a year old, sired Grand Leader 2d, the Grand Champion of the world. Also a few of the tops from our fall litters by Royal Superbus and Fashion Longfellow 27th, and a few bred gilts. Our herd won the Premier Breeders' Ribbon at the P. P. I. E. A. B. Humphrey, Escalon, San Joaquin Co., Cal.

**Bernsteins Herd**—"One of the Best in the West" has three great herd boars. King's Big Bone Leader, Young Jumbo, and King's Massave Orange. Watch for the sensational offering of sows bred to this great trio which sell in the Big sale of the Kings' County Poland-China Breeders at Hanford, February 20. Bernsteins Ranch, Hanford, Cal., W. Bernsteins, Proprietor.

**Hogs—Duroc-Jersey—Bargains**—Two year old, registered boar, \$35.00. One year old, subject to register, \$30.00. Send for pedigree. We shipped pigs recently from San Diego County to Yolo County. **THE SAN DIEGO LAND CORPORATION**, 401 Southern Title Building, San Diego, California.

**For Sale**—Several four and five months old Poland-China boars, registered. Something that you will be proud to place at the head of your herd. Write for price and information. Address H. B. Peake, Manager, 358 11th St., San Bernardino, Cal.

**Superba, World's Grand Champion Poland-China** boar and one of the greatest sires of the breed. Spring boars ready for service, also few sows bred to this noted sire, reasonably cheap. Rough's Greenfields, Arlington Sta., Riverside, Cal.

**Duroc-Jerseys**—Sold out of bred gilts. Two service boars. One of them an outstanding individual for sale. Also Fall Pigs, both sexes. Twenty-three ribbons on 11 entries, including 6 championships, State Fair, 1917. Frederick M. Johnson, Napa, Cal.

**Berkshires**—First prize junior boar; first and second senior boar pigs including junior champion; fifteen spring and fall open gilts sired by Ames Rival 115, champion boar; and two junior yearling bred sows priced cheap for immediate sale. F. D. Hall, Perris, Cal.

**We Pay Cash for Hogs of All Sizes**, weights and breeds. Any number from one to several thousand considered. What have you? Durbin and Forbes, 722 San Fernando Building, Broadway 4170, Los Angeles.

**Duroc-Jerseys**—The blood of champions such as Defender, Orion Chief, Taxpayer, "13," Golden Model. A few choice fall gilts of Grand Champion Breeding at reasonable prices. T. R. Bond, Tipton, Cal.

**Duroc-Jerseys**—15. 8 females, 6 barrows, 1 boar. Registered, life immunized from cholera. 3 months old. Price \$20 each for the bunch. Garden City Sanitarium, San Jose, Cal.

**Large Yorkshires**—The ideal hog for the progressive farmer. Service boars and fall pigs, both sexes, for sale. A. L. Tubbs Co., Calistoga, Cal.

**Recorded Poland-China** boars, 18 months old, sired by Superba. Bargain at \$50.00. Immuned, and tried breeder. C. R. Hanna, Riverside.

**PLW Durocs**—Golden Models and Great Wonders are the most consistent winners at every show. Peters, Lamson & Walker, Devore, San Bernardino County, Cal.

**Large Type Poland-Chinas** are prolific and profitable. Can furnish boars any age at reasonable price. J. A. Crawshaw, Hanford, Cal.

**Rancho Rubio Durocs** all sold out except some choice fall boar pigs. Write for prices. Elmer Lamb, Ceres, Cal.

**Greenwood Farm Durocs**—"Size with Quality." H. C. Witherow, Palo Cedro, Cal.

**Durocs—P. & L's Defender** by Defender heads herd. Joseph Prendergast, Route 2 Box 87A, San Bernardino, Cal.

**Registered Durocs of the big type**—Cholera immune. Derryfield Farm, Odd Fellows Building, Sacramento, Cal.

**Carruthers' Farm Berkshire Hogs**—Our herd won Premier Exhibitor prize at the P. P. I. E. Exposition, Mayfield, Cal.

**Poland-Chinas**—A few good breeding boars. S. F. Williams, Orland, Cal.

## RABBITS

## GOATS

**Toggenberg Milch Goats**—Rae P. Williams, Federal Realty Building, Oakland, Cal.

## Veterinary

Answers in this column by Dr. Wm. Petrie, 2714 South Harvard Blvd., Los Angeles, are without charge. For immediate mail answer remit \$1.00. In writing questions give full symptoms or particulars of injury of animal.

## Warts

How can I remove warts from a yearling heifer's neck? Have tried tying horse hair around them at the base but without success as some are too large for that.—Subscriber, Julian.

Warts can often be removed by wetting them every day with castor oil. If this does not remove them then use nitric acid. When using nitric acid be careful not to allow any of it to touch the hands or clothing as it is a very powerful caustic. Rub a little grease or vaseline around the warts and use a swab to apply the acid. One application is often sufficient.

## Congested Udder

We have a heifer fresh with her first calf. The milk was bloody at first but finally became normal. She gave about 16 pounds of milk at each milking at first; dropping down to eight in the morning and four at night. Now she gives only two pounds at a milking. She is a hearty eater. We feed two pounds beet pulp, one-quarter pound cocoanut meal and 20 pounds of alfalfa hay cut and mixed wet twice a day. She is in good condition and we do not like to lose her. What can be done for her?—Subscriber, Tulare.

You are feeding too heavy. The amount of beet pulp and cocoanut meal is not too much, but 40 pounds of alfalfa hay is more than she can digest properly. A larger and older cow might stand that amount. Give her a physic of one pound of epsom salts and half a pound of common salt dissolved in two quarts of hot water.

When cool give at one dose as a drench. Follow this with these powders: Powdered gentian, four ounces; powdered nux vomica, two ounces; bicarbonate of soda, four ounces; farina enough to make one pound. Mix and divide into 16 powders. Give one powder morning and evening for four or five days, then one a day while they last. Reduce the amount of hay one-half. Cut a little of the hay to mix with the powders, and you might wet that but give the rest of the hay dry. She will masticate the dry hay much better and digest it much better also. When she gets right you might increase the hay a little. Be sure she gets plenty of good water to drink.

## Mating Time Is Here

Now's the time to put your hens and roosters in the pink of condition with Poultry Pan-a-ce-a.

If you want chicks that will live and develop rapidly—if you want early broilers—if you want pullets that will develop into early winter layers, then feed the parent stock—

## "Mother Jug" and Her Children

Written for California Cultivator By Jean A. Koethen

THE supreme need of the baby chick the first five days is mothering. This includes sufficient warmth, but it wants more than warmth; it wants to feel the touch of something protecting and maternal. This sounds like sentiment, but it is not, it is fact.

This spring when my February hatch was about to come off, I resolutely turned my back on the lamp-brooder and said, "I'll try the fireless way." I have often used the fireless brooder after the first week, but never from the start. We partitioned off a snug corner of the feed house and put a small window in the south wall, close to the floor, so that the chicks could have sunshine most of the day. The Philo fireless brooder, with a nice nest of straw and a clean quilt, was ready. Everything seemed propitious for a good fair trial of fireless brooding.

But alas, "the best-laid schemes of mice and men"—my hatch, contained but 16 chicks, and 16 chicks could never keep themselves warm in February in a fireless brooder. The Philo brooder was shoved one side, a clean apple box with the inevitable burlap sack and plenty of straw in the bottom substituted and "Mother Jug," hastily wrapped in scraps left over from our Christmas bath robes, and filled with boiling water, placed in one end. Over the whole, tucking down about the jug, I threw an old cotton blanket, folded so that it would rest on the backs of the chicks and still fall well over the sides of the box, and my "jug-mother" was ready.

Contrary to the advice of all authorities, I never leave my chicks in the nursery of the incubator after the hatch is over. If my hatches were large I might be obliged to do so, but I never can believe that they are comfortable, in such a box-like place with nothing soft and warm and cuddly about them. If any chicks are unable to extricate themselves from the shell, they are helped out and left on the tray till they are dry.

This little hatch of 16 was tucked in close to the jug-mother and left there for 24 hours or thereabouts, the water in the jug being changed morning and night. I found that if it was put in boiling hot and the jug well wrapped, it was still warm at the end of 12 hours, and the chicks, cuddled against its soft side, were unmistakably comfortable. At the end of the 24 hours I let them out in the sun before their little window and gave them water, grit, and some steel-cut oats to pick at. As long as they hopped around cheerfully I let them stay out, but as soon as they began to lean against one another, they were quickly pushed back into the box and covered up warmly. Two chicks had been helped out of the shell at the end of the hatch, and it seemed as if one of these could not pull through. Two or three days these chicks remained cuddled against the jug-mother when the others were let out to eat, but plenty of heat and something to cuddle against won the day, and they were soon as lively as the others, though still undersized. If those chicks had been with a hen, she would probably have crushed them, and they would certainly not have lived in a lamp-brooder.

The weather was cold and rainy, and the chicks were ten days old before they could be outside, and three

weeks old before I felt justified in leaving them without the jug. As soon as they could be out I had a little run made for them. It was about 15 inches high and enclosed with shakes on three sides, while the fourth was covered with wire. By placing this run with the wire side toward the east, I gave them the early morning sunshine though they were still brought in at night, but by the time they were three weeks old they had outgrown this, and after a few days in the large wire run they were given the range of the garden. It seems best to keep chicks confined for the first three weeks of their life for fear of prowling dogs and cats and the sudden shower or change in the weather. After this age they quickly become independent. I can see no occasion in our climate for giving chicks artificial heat for six weeks, as is sometimes advised. These 16 chicks kept each other warm in their apple box in an outdoor coop after three weeks, and the next brood did much better.

This second brood, which took possession of the jug-mother, when the first one gave her up, numbered 27 and could easily in the warmer weather have been raised without the jug. As it was they seemed actually to complain of the warmth after the fifth day when our March hot spell came on, and I gave them the fireless brooder. Now that the mornings are chilly again, I give them the jug in their little play yard as soon as they are out of the brooder, but a few minutes' warming is sufficient, and they are soon out of doors. There were in this brood three chicks that had to be helped out of the shell, but all were brought safely through the first critical days by the comforting warmth of "Mother Jug." Every one of the 43 chicks of these two broods is still alive, and I have never raised my early chicks so easily.

I would not for a minute argue that a jug is always the best substitute for the hen. It works very well with 25 chicks; I think it would do equally well with 50 if a larger box were used. Where a large number of chicks are raised every season it would probably be too troublesome, though I doubt if it is any more troublesome than a hen, take it all in all. The peculiar advantages which the jug has over other methods of artificial brooding are that it costs absolutely nothing, for almost every home contains a vinegar jug; there is no fussing with lamps; there is no danger of fire or of the chicks getting into the heater as mine did several times with the lamp brooder; the chick has something to snuggle against, which is its heart's desire; the heat is always sufficient; the air space is easily adapted to the size of the brood; ventilation may be readily increased according to the age of the birds; the chicks are never overheated, for they never seek the "mother" unless they are cold and transition is easily made, as soon as the chicks are ready for it, to the fireless brooder.

With any sort of brooding, lice and mites must be always watched for. I thought that my new boxes would be mite proof for a good while, but the hot weather brought them from somewhere, and every box had to be painted with kerosene and carbolic acid. Incubator chicks ought not to have lice; they are certainly free when they come out of the shell, but

the lice always find them after a few weeks if they are not well dusted. I used to sprinkle their backs at night after they were in the brooder, but this annoyed them so much—and who would like to breathe lice powder all night?—that now I take them one by one and fill the growing feathers with powder under wings, over back and

### For Worms in Chickens

"Very successful" is the way a Massachusetts poultry raiser describes a remedy for worms in chickens, suggested to him by a United States department of agriculture official after recommendation by investigators in the California agricultural experiment station.

The poultry raiser added, in his letter of thanks, that thorough trials of other remedies had failed. That which he praised follows:

#### Treatment

"Give the chickens no food or water for 24 hours before treating; then feed them half the usual amount of ground feed in which has been mixed

head and about the vent. Going over them in this way once in two weeks ought to keep them free from lice. When chicks a month old begin to look listless and do not seem to grow as they should, I at once inaugurate a campaign against lice and mites, but it is far better to begin the campaign before the pests arrive.

finely chopped tobacco stems soaked for two hours in all the water they will absorb. One pound of tobacco stems (weighed before soaking) is sufficient for 100 birds. Two hours after the chickens have eaten the medicated mash, give them one-fourth of the usual ration of ground feed mixed with water in which Epsom salt has been dissolved, using 11 ounces of Epsom salt for 100 birds.

"To reduce the chances of further infestation all manure and loose dirt should be removed from the chicken yard and the pens and roosts thoroughly scalded and cleansed with hot water."

### Stop Shipping Poultry in Ice

That chilled dry-packed poultry reaches destination in much better order than the wet ice-packed product is shown, the United States department of agriculture states, by reports which are reaching it from various markets. The specialists of the department recently studied shipments of chilled dry-packed poultry and wet ice-packed poultry which had been shipped in the same car. The dry-packed birds were in excellent condition, while the wet-packed were unfit for use on arrival at destination. The dry-packed product

stands delays in transit far better than the ice packed, especially during warm weather.

A number of packers, at the instance of the department, have changed from wet to dry packing. Many have reported that they have had uniformly good results with dry-packed poultry but have been having trouble with ice-packed birds. A number who have compared the two methods report that they will introduce the dry-packing system in all their branch houses at once.

### Provide Shade for Chicks

Much of the loss of young chickens in summer months can often be traced to the lack of shade, says T. E. Quisenberry. If the young stock is not protected from the hot sun on a summer's day the chicks are certain to be dwarfed to a great extent and deaths are sure to result.

The drinking vessels should be kept in the shade and the fowls given protection from both sun and rain. If you can't provide for a cornfield near the poultry yards, then sow some sunflower seed, set out some fruit trees,

or place grape vines around the fences surrounding the poultry yard, or provide shade in some other way that will not detract from the appearance of your place. You had just as well grow a crop of grain or a crop of fruit on land on which you raise poultry as not. If you can't provide shade in any other manner, drive some stakes and cover them with a light frame, and on this tack some burlap, canvas, or something of this nature. This will give the birds a comfortable resting place on a hot summer's day.

### Pertinent Pointers for Poultrymen

More eggs and poultry will save beef and pork.

Never allow the mother hen to range with the young chicks until they are at least two weeks old.

Enormous numbers of young chicks are lost each year by allowing them to run in the wet grass during their early life.

Early hatched pullets produce more winter eggs and return the greatest profits. Early hatched chicks have the advantage of a longer and better growing season. Hot weather retards the growth of young chicks.

Never allow the mother hen to range with the young chicks until they are at least two weeks old. Enormous numbers of young chicks are lost each year by allowing them to run in the wet grass during their early life.

House the flock comfortably; keep houses dry and well ventilated, allowing plenty of fresh air and sunshine. Remodel the old house—stop cracks and eliminate drafts. Give hens a good straw litter to scratch in during the winter months.

Shade and range for chickens will give the best results. Hot sun retards growth. There should be trees, corn, sunflowers, etc., on the range to provide shade during the hot summer months. Chickens on range pick up much of their food.

Green feed is excellent for poultry and can be substituted for a considerable amount of the grain ration. Grow oats, vetch, and rape for summer use; cabbage and mangel beets for winter. Store cabbage and beets in a dry room or bury in a pit covered with straw and earth.

Greatest returns are procured by feeding sour milk or buttermilk to both young and old birds. Results in greater gains. Will require less grain. Produces more eggs. Increases the profits. Makes a home market for waste by-products.

Save eggs during April and May for winter use by preserving in water-glass. Mix nine quarts of water, boiled and cooled, with one quart of waterglass. Will preserve 15 dozen eggs. Place the solution in a five-gallon jar. Store in cool place for winter use.

# RAISE EVERY CHICK

More chickens this year than ever before. More for your table, more for market.

That's the demand. You need them to replace high-priced meats. The country needs them for the same purpose.

The opportunity to make money and save money with poultry was never so great as now. But you must make every chick from your high-priced eggs grow, and every ounce of your high-priced feed produce meat.

Certainty of success—of raising every chick that is right to marketable age quickly—is insured when you use the

## STANDARD Colony Brooder

It stops the frightful losses so common to the brooder period. Makes three chicks grow where one grew before. Broods 100 to 1000 chicks with equal success, at a cost of less than 6 cents a day. Burns hard or soft coal. Fire lasts 24 hours from one filling. Cuts installation and operating cost to less than half—labor cost to less than a fourth.

Absolutely safe and sanitary. Nothing to catch fire; no corners where chicks may be crushed; no wooden walls or curtains to harbor vermin and dirt. Complete ventilation without drafts. Nothing to it but a smooth, solid cast iron stove, a clean galvanized steel hover, and the regulating apparatus. Nothing to wear out. Positively self-feeding and self-regulating.

It is so good that it has many imitations. But our patents will be protected. Make sure you get the Standard. We are so certain that it is the best brooder ever built, so sure it will satisfy, that we let you

### Write Your Own Guarantee

What do you want a brooder to do for you? Write it down. We'll sign it. And if the Standard does not fulfill your guarantee in every particular we will return your money without argument.

The Standard is endorsed by all agricultural colleges and experiment stations. Among more than 30,000 enthusiastic users, big and little, not one failure has ever been reported.

Over 6000 dealers sell it. The one nearest you will be glad to show you the Standard in operation.

Write for the Buckeye Catalog and get the most wonderful testimonials of chick raising success you ever read. A post card request will bring it.

### VEGETABLE CALENDAR

Continued from Page 277

able to make extensive plantings. Some of the plantings we made this last month have not been moving very fast, due to the cold weather, but with a few sunny days our peas, onions, carrots, etc. will make progress.

The birds are in some gardens very troublesome. A good plan is to put up scarecrows or stretch a few lines of black cloth along the rows. We have seen wire netting small mesh, also used to advantage. It is generally only in the early stages that the peas are attacked. The slugs may also become active and it will therefore be necessary to look for these pests at night by the help of a flash light.

#### Potatoes

It does not appear to be practical to plant earlier than this month. Of course we are getting many surprises in climatic changes, and it is best not to take too many chances. Play safe. Those who have a fairly large garden should plant this crop. Contrary to the statement we saw recently in a newspaper from an "expert" to the effect that "it can be grown anywhere," we must contradict that right now. The potato thrives best in a fairly rich sandy loam, and it would not be advisable to plant it in heavy adobe such as is often found in many parts of Northern California. We have seen it tried and there was a very poor yield, the tubers also being very much deformed. It was waste of time, seed, and money. When preparing the ground apply artificial manure or preferably that from the farm yard. Have the ground deeply trenched and plant the tubers in rows four to six inches deep, 12 inches apart in the rows, which should be 30 inches apart. It is always a good plan to start the tubers in a shallow box near a window or in a well lighted room. This method is called sprouting and in two weeks or so they will be ready to plant out and will have a good start. Good sized tubers can be cut up into two or three sections but always contrive to leave at least three "eyes" or sprouts to a section. When buying seed tubers insist on having them sound and free from disease and certified to that effect, as this will save you from much trouble later on. Among the earlier we would advise Early Rose, British Queen and Irish Cobbler, all three reliable and good for table or market purposes. For the main crop secure your seed tubers as soon as possible of Oregon Burbank and Great Divide. The last named is capable of withstanding heat and drouth; the vines are extremely vigorous and the tubers are thick and round in form, the flesh being pure white and of excellent quality. Five to six sacks of tubers will be required to plant an acre, and an average yield would be 300 to 400 bushels per acre. It is always a safe plan to dip the tubers in a solution of formalin which will prove a safeguard against fungoid disease. This applies to the seed potatoes even though they have been certified. Another important point to remember is not to plant potatoes on the same plot as occupied by this crop last year.

#### Peas

The early varieties are now several inches above the ground in many sections around Hayward and San Leandro where the San Francisco market gets its early peas and the crops are looking very healthy after the rains. It will be necessary to keep the cultivator busy on the ground. Make another successional sowing of Little Marvel American Wonder and Abundance.

#### Carrots

It will pay to prepare the ground very carefully for this crop. Work in plenty of good fertilizer and have the soil deeply trenched. Endeavor to keep your soil loose, and you will be amply repaid, especially when growing the deep rooting varieties. Make sowings of French Forcing, Oxheart, Chantenay and Long Orange. The latter variety should not however, be grown on very heavy soils, but on light soils it is unexcelled and is a very heavy cropper. Sow the seed very sparingly and as soon as the seedlings are well above ground thin to four inches apart. Sow in drills half an inch deep and 18 inches apart.

#### Cabbage

Plants of the varieties sown in Jan-

uary should now be ready to plant out, and sturdy specimens only should be selected and planted 18 inches apart in rows two feet apart. Firm planting is essential, and they should not be allowed to suffer for want of water.

#### Lettuce

On well prepared ground sow seeds thinly in rows one-quarter of an inch deep, 18 to 24 inches apart, of the following varieties: May King, very early, forming hard, crisp heads; Los Angeles, a popular market and all round sort; and White Paris Cos, often called Romaine, is very tender when well grown and blanched. For a good poultry feed sow a quantity of Morse's Chicken Lettuce, a new introduction which grows three to four feet high furnishing plenty of green feed. We consider this will fill a long felt want.

#### Onions

These should be well above the ground and thinning should be carried out this month. Thin the seedlings to six inches apart and plant out the surplus about the same distance apart on fairly rich soil in rows 18 inches apart. Keep the cultivator busy between the rows when conditions permit. Onion "sets" may still be planted also.

#### Radishes

Make sowings of Early Scarlet Turnip, French Forcing, and Halflong. They will give best results on a rich light soil, and if simply grown for home use small but frequent sowings should be made.

#### Turnips

On fairly rich well prepared soil sow Early Snowball and Purple Top Flat Dutch, both good table varieties. For those who like turnip greens the variety, Seven Top, should be grown; the root is too small to use. As soon as the seedlings are well above the ground they should be thinned to six inches apart. The seed should be sown very sparingly in drills one-half inch deep, 18 to 24 inches apart.

#### Beet, Sea Kale or Swiss Chard

This makes a very useful spinach and is very popular, as it can be frequently cut. Sow seeds in rows thinly, 24 inches apart. Large White and Giant Lucullus are both good varieties.

#### Tomatoes

Make up a hot-bed by placing horse manure and leaves in a large box or wooden frame work about two feet deep, and on this place a good covering of soil and sow the seeds of these varieties broadcast: Chalks' Early Jewel, Victoria Whole Salad and San Jose Canner. They may also be sown in boxes placed in a warm window. It will be necessary to cover the frame with cheese cloth until all danger of frost is over, and we shall give instructions next month regarding planting out and general cultural hints. In the meantime have a fairly large area put in shape for early planting. There will be a large demand for this crop this year.

#### Strawberries

Planting of these should be completed this month, and all runners removed from the parent plants.

#### Raspberries

Planting and general renovation should also be completed on these without delay. Tie up all canes to the fence separately so that all can get plenty of sunlight during the growing season. The best varieties are Superlative and St. Regis, the latter bearing for four months of the year large berries of excellent quality. The ground between the rows should be well manured. Plant one and one-half to two feet apart in rows three feet apart.

### QUESTIONS AND ANSWERS

Continued from Page 265

ounces, pearl ash, or potash, one-half ounce, soft water, four gallons. Heat and skim. Cover bottom of clean barrel with salt half an inch and after hams have been thoroughly rubbed with salt and saltpeter pack in the hams and cover with pickle. Keep weights over the hams to force underneath the brine."

### CHISEL TEETH

Let meatless and wheatless be kickless and whineless  
Lest all days to come be soulless and spineless.

A million dollars' worth of damage each year — that's what the pear thrips is capable of doing to the fruit industry of California. Because of the minute size of the insect—the rapidity of its spread over large areas and the suddenness of attack in great numbers—the control of this pest has always been a serious problem.

We have conclusive proof, however, that it can be controlled by thoroughly spraying with

## Miscible Oil No. 2--For Thrips

This is a high gravity oil—specially prepared for this purpose—where great penetration and quick evaporation are necessary.

Miscible Oil No. 2 is a Universal Brand Spray. That means that it is uniform—that it is made from the best materials—and that its manufacture is supervised by chemists and entomologists who have had both laboratory and field experience.

Miscible Oil No. 2 will kill pear thrips in the bud better than any other spray—there is no question about it. Order your spray now.

If you will write our entomologist, Paul R. Jones—acknowledged an expert in the control of pear thrips — he will be glad to help you to decide your individual spraying problems. This expert advice is free. Write today.

## The Cultivator Patterns

8725—Ladies' Kimono Waist. Cut in sizes 34, 36, 38, 40 and 42 inches bust measure. This kimono waist may be cut on a fold or with a seam at center back, making the front edges bias.

8714—Children's Dress. Cut in sizes 4, 6, 8 and 10 years. The dress has a long waist effect and the one piece skirt is side plaited all around to the long waist.

8701—Ladies' One Piece Apron. Cut in sizes 36, 40 and 44 inches bust measure. The bib may be cut square or in a point and there is a button and buttonhole at the back to hold the apron in place.

8151—Ladies' Shirt Waist. Cut in sizes 34, 36, 38, 40 and 42 inches bust measure. The front and back are gathered to shaped yokes; the sleeves may be long or three-quarter length.

8112—Child's Dress. Cut in sizes 4, 6, 8 and 10 years. This is a simple little dress having a waist without fullness and closing at the center front; the straight two-gored skirt has box plait.

8118—Ladies' One Piece House Dress. Cut in sizes 36, 38, 40 and 42 inches bust measure. The dress is cut in one piece, has the new collar, flare cuffs and triangle pockets.

8712—Ladies' Two Gored Skirt. Cut in sizes 24, 26, 28, 30 and 32 inches waist measure. This two-gored skirt shows the feature of the new one-sided effect in the double inverted plait at the left side.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH.

### HOW TO ORDER PATTERNS

Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2 cent) stamps for each number. In order to furnish our readers with the very latest New York City styles, all pattern orders are filled in New York City. Therefore, we promise to deliver all patterns ordered within two weeks; we guarantee safe delivery of all patterns. Address

### TO N. S., WHO DIED IN BATTLE

I knew you glad to go; I envied you.  
To pour the glory of your young life forth  
In one libation—what more happy lot?  
Be spared the slow, sad drip of dreams and hopes,  
Of loves and memories, that leaves us dry  
And bitter, seared and bleared with creeping age—  
Who would not die in battle? Life cut short?  
Nay, blossomed in a moment, rich with fruit,  
Blossom and fruit together, which the years  
Might never ripen, uneventful years  
Of nursery-gardening one small, precious self,  
Which seeds and dies and none knows why it was.

I knew you glad to go; you knew not why—  
The sting of high adventure in your blood,  
The salt of danger savoring nights and days;  
And in your heart the wave of some unknown  
Deep feeling shared with comrades, that bore you on  
The tideways that the coward never knows,  
Nor he who hoards his life for his own ends.

O happy boy, you have not lost your years!  
You lived them through and through in those brief days  
When you stood facing death. They are not lost:  
They rushed together as the waters rush  
From many sources; you had all in one.

You filled your little cup with all experience,  
And drank the golden foam, and left the dregs,  
And tossed the cup away. Why should we mourn  
Your happiness? You burned clear flame, while he  
Who treads the endless march of dusty years  
Grows blind and choked with dust before he dies,  
And dying goes back to the primal dust,  
And has not lived so long in those long years  
As you in your few, vibrant golden months  
When like a spendthrift you gave all you were.  
—Anon, in The Atlantic Monthly.

### A STORY OF THE PLAINS

**J**OHAN BOYNTON rode swiftly out of the little yard surrounding his log home, turning a moment in his saddle to wave a last good-bye to the young wife and yellow haired baby on the rude porch. "Poor little woman," he reflected, with a swift pang, "how young and slender to be left alone all day in this lonely place. Keep up your courage, dear," he called cheerily back to her, "I'll be back by sundown sure!"

Alice stood there, her hand shading her eyes, and watched the rapidly disappearing figure until it passed beyond her range of vision in the distant blue shadows of the prairie. Then with a forced gaiety she picked up the baby clinging to the skirt of her blue gingham dress, and tossed it upward with her slender young arms, that the dreadful silence might be broken by the child's gurgling laughter.

"We must work hard today, Mary Ashley," she cried, when she and her burden were breathless from their play, and the rosy baby clung crowing round her neck. "We must bake, and sweep the house, and cook something good for supper, so that father will see how much we've done when he comes home tonight." She looked lingeringly again across the broad prairie, then went resolutely into the house to try to forget her anxiety in work.

Alice Stone had been but a girl of twenty when she married her strong pioneer husband and went away out west with him, but girls grew swiftly to womanhood there in the early fifties, and in the three years since they had taken up their claim, the young wife had learned an endurance she had never dreamed of in her New England home. It may be that some of the silent strength of the prairies

had become a part of her, as their gift to the girl who had learned to love even while she feared them.

The cause of her fear was not the nervous apprehension of a lonely woman; it skulked in war paint and feathers in hidden ravines, and emigrant trains of late had reported hair-breadth escapes and a few horrible encounters on their journey across the plains. Well might the young wife grow faint as she watched her husband start out on his lonely ride of many miles with only his six-shooter to protect him.

The morning passed slowly away, while Alice worked feverishly, though conscious, in spite of all her efforts, of an anxiety that gnawed within her like a pain. After their simple dinner, which she prolonged as far as it was possible, she put the little Mary Ashley on the porch to play with a cherished rag doll, while she finished her duties in the kitchen. It was not long before she heard the child's voice calling her, and when she came to the open door, "Mummy," the little girl was saying, "see all the smoke way over dere."

Alice followed the tiny pointing finger with her eyes, and a sickening wave of feeling swept over her, so painful that she felt she must cry out for relief. But immediately her motherhood asserted itself and came to her rescue. "No, dear," she answered, with white lips, "that is not smoke, but dust. Some one is passing by, probably an emigrant train. Yes," she repeated, desperately to herself, "of course, it's an emigrant train."

Though all the time her poor heart knew that that was not the regular road, and that white men never dared to deviate from the course. In the fullness of her love, it never even occurred to her to wonder if the Indians would discover her house, as they had those of other settlers. The stories she had heard of the unprotected women and children in these tragedies had their sequel in the pistol she kept loaded night and day, as the final terrible refuge for herself and her child, and she knew that if the time ever came, she could use it. But today, the one thought that beat against her brain was, "They are going in the direction that John went; oh, will he have heard, will he have heard?"

No victim of the inquisition ever suffered more acute torture than did Alice Boynton that bright July day, and she never lost the lines which suffering engraved around her eyes and mouth. Had it not been for the child, she felt that she would have fled alone across the prairie, rather than go on enduring this racking suspense, but being a mother, she played a mother's part, and smiled and talked with a wild despair in her eyes, of which the little Mary was mercifully unconscious. As evening drew near, she began to dread the sight of the sunset glow in the western sky, knowing that in spite of herself she would strain her eyes for the dark figure of a horse and rider outlined against it. But she never threw aside for a moment the part she had set herself to play. She dressed the little girl in a ruffled white frock, and curled the bonny yellow hair in the way her father liked best. She chose the daintiest of her summer gowns from her own slender wardrobe, and put it on carefully, but the contrast between the pink dimity and her own white

**Apollo**  
for Culverts

Rust-resistant,  
Durable, with  
Copper Steel base—

**Apollo-Keystone Copper Steel Galvanized**  
makes safe, substantial roadway culverts.

APOLLO is the highest quality galvanized product manufactured for Culverts, Flumes, Tanks, Roofing, Spouting, Garages, and all exposed sheet metal work. The added Keystone indicates that Copper Steel is used. Time and weather have proved that APOLLO-KESTONE Sheets last longest in general service. Sold by weight by leading dealers. KEYSTONE COPPER STEEL is also unequaled for Roofing Tin Plates. Send for "Better Buildings" and "Apollo" booklets. They are valuable to all sheet metal users.

face when she looked in the glass, made her turn quickly away, and she knew that she was trembling.

"Now, Mary Ashley," she said to the baby, happy in its unaccustomed finery, "we'll go and make some waffles for father's supper, for those are what he likes best. No, dear, don't go out on the porch now." Alice would not let herself see what she had known for an eternity it seemed to her — that the sun had hung its last red banner in the distant sky, and that twilight was stealing softly over the weary land. She dared not look over into the empty, empty West.

The table was set with her wedding silver and flowered china, and a little cluster of pink roses from a slip she had brought from her home garden, made a bright spot of color in the center. The waffles waited in tempting piles, and at last Alice could deceive herself no longer. She went to the door, holding her child tightly in her arms, regardless of the little ruffled dress.

Around her stretched the boundless prairie as far as the eye could reach. The last faint color had died out of the western sky, and great masses of clouds were forming above the horizon. A tiny breeze that had stayed in with the dusk, lightly touched the hair on her temples. The baby gazed silently with her, its blue eyes wide and bright. They stood thus for some minutes, then Alice turned back to the room where the silver and roses on the little white table gleamed faintly in the twilight, and shut the door behind her. She could only wait, and pray to the God of the white men.

Meantime John Boynton had been riding rapidly over the prairie in the direction of Ore Creek, where he was to see a man in regard to the exchange of some cattle. He reached the town about noon, and going to the one hotel on the main street, gave Bonny, his good little Mexican pony, her dinner of oats to eat from the curbing, while he went in search of his man. He found him among the loungers in front of "The Last Chance," none the better for having spent most of the morning inside with some boon companions, and Boynton had difficulty in getting him to talk business rationally. He finally persuaded him to join him at dinner in the hotel and under the stimulating influence of what passed as good cooking, the matter was settled to their mutual satisfaction.

#### HOW TO USE RICE FLOUR

Written for California Cultivator by  
Mrs. E. G. Buerkle, Whittier

These recipes I made myself and am using them every week in my home and we like them very much.

#### Victory Bread

One pound rice flour, scalded with one quart milk or milk and water. When cool add one pint warm water, one large tablespoon salt, two tablespoons sugar, one compressed yeast cake dissolved in a little warm water. Stir in white flour to make a sponge and let rise over night. In the morning add flour to knead and knead well, let rise to twice its bulk and put into pans. When light, bake. Makes four large loaves.

#### Another

One-half or three-fourths pound rolled oats or oatmeal scalded with one quart milk or water. When cool add one large tablespoon salt, one-fourth cup sugar and one-half cup molasses. one compressed yeast cake dissolved in lukewarm water, one quart warm water and flour to make sponge, then

proceed as in above recipe. Makes five large loaves.

#### Liberty Cake

Two cups white flour, one cup rice flour, one cup sugar, one-half teaspoon salt, two heaping teaspoons baking powder, one-half cup seedless raisins, one large tablespoon shortening, two eggs and one cup milk. Sift together flour, rice flour, sugar, baking powder and salt, add shortening and mix well with the hands, then add raisins. Break eggs in a bowl and beat, add milk and add to flour mixture. Will make one loaf and eight drop cakes in muffin tin.

#### War Muffins

Two cups wheat flour, one cup rice flour, one tablespoon shortening, two heaping teaspoons baking powder, one teaspoon salt, two and one-fourth cups milk or milk and water. Sift together flours, baking powder and salt. Add shortening and mix well, add milk, beat until smooth and bake in muffin tins. Makes 16 muffins.

I use milk instead of shortening in making bread for we have a cow and have plenty of milk. If all water is used a large tablespoon of shortening added to the batter will improve the bread.

A Pasadena baker told me that if when using rice flour in bread making it is first scalded a much finer grained bread will result. The unscalded rice flour makes a coarse grained bread.

#### USE OF RYE FLOUR

Until March 3 rye flour may be used in making victory bread. After that date it will be placed upon the same basis as wheat, because rye flour is now being shipped to the allies.

Bread made of graham flour or whole-wheat flour may be called victory bread, as this flour effects more than a 20 per cent saving over ordinary wheat flour.

Beginning February 3, bakers must use at least five per cent of other cereals in all bread baked by them, and this amount must be increased as rapidly as possible until, by February 24, they are using at least 20 per cent of other cereals to 80 per cent of wheat flour. No baker, however, will be entitled to advertise his product as Victory Bread until he has reached the 20 per cent ratio.

The list of cereals to be used in baking Victory Bread has been made as varied as possible in order that each baker may be able to obtain a sufficient supply of one or more of them in his own locality at reasonable prices.

It is hoped that whenever possible cereals locally produced will be used in order to reduce transportation.

Any baker who finds it impossible to secure these cereals through ordinary trade channels is asked to appeal to the federal food administrator in his own state, who, through the various departments of the food administration in Washington, will aid in obtaining a supply.

#### USING RYE, BARLEY AND OAT MEAL

Written for California Cultivator  
By Mrs. Clara Brons, Fresno

You asked in your last paper for tested recipes of wheat substitutes. I will send some that I have been using that are very good.

#### Rye Bread also Barley

One cup sweet milk, scalded and cooled, two cups lukewarm water, five cups rye or barley flour, 1½ cups sifted white flour, one tablespoon of but-

ter substitute, melted in milk, one tablespoon salt, one cake yeast.

Dissolve yeast in liquid; add 2½ cups of rye or barley flour or enough to make sponge. Beat until smooth; when light add white flour and rest of barley flour. Knead or beat at least five minutes. Let rise, work into small loaves, cut two long gashes lengthwise of loaves, let rise until double their size; bake 45 minutes.

#### Oat Meal Bread

One cake yeast, one-half cup lukewarm water, two cups boiling water, two cups rolled oats, one-quarter cup brown sugar, two tablespoons butter substitute, four cups sifted flour, one teaspoon salt. Pour two cups boiling water over rolled oats, cover and let stand until cool, or lukewarm. Dissolve sugar and yeast in one-half cup lukewarm water, add shortening, then add this to oat meal and water. Add one cup flour or enough for sponge. Beat well, leave until light. Add salt and rest of flour. Knead well. Place in greased bowl, cover, let rise until light. Make into loaves and let rise. Bake in a hot oven 45 minutes.

#### Gems from Barley or Rye

One cup sour milk, two tablespoons brown sugar, one egg, one tablespoon shortening, one-half cup rolled oats and enough barley or rye flour to make a stiff batter, one-half teaspoon soda. Bake in greased gem pan in hot oven.

For these heavy flours I find that sour milk and soda are a great deal better than baking powder and sweet milk.

#### WITH MILO AND EGYPTIAN MEAL

Written for California Cultivator  
By Laura F. Kimball, National City  
"Less" Johnnie Cake

As you see this is flourless, cornmealless, sugarless and fatless. Thought it might help to save the wheat, etc.

One and one-half pints milo meal, three tablespoons molasses, one egg. Stir until egg is beaten. One cup sour milk, one teaspoon soda, one teaspoon salt.

Bake in a sheet and cut in squares.

We use the brown milo. Look it over carefully and grind in coffee mill. I also send mother's recipe for Egyptian brown bread which we have used for over 30 years; you can use Egyptian meal, either white or brown, kafir corn, or milo. I have used them all, but brown milo or brown Egyptian is much the best we think. (I have not had feterita yet.) This recipe uses wheat but saves a third as you see.

Can rice-bran be used like wheat-bran in cooking?

#### Egyptian Brown Bread

One quart Egyptian meal, two quarts wheat flour, two-thirds cup molasses, three pints sour milk, three teaspoons soda, three teaspoons salt. Bake in a loaf (or steam if you wish). I sifted some oil-cake and found it takes the place of suet in Johnny cakes, etc. I use chicken oil in place of butter in cooking.

#### WAR BREAD

Written for California Cultivator  
By Alice Ames, Fallbrook

I am sending two favorite war bread recipes. One is Economical Brown Bread which we like very much and which we think is also delicious cut in slices and buttered to carry for lunches.

#### War Brown Bread

One cup corn meal, one cup graham flour, one cup rye flour, one tea-

spoon salt, one tablespoon soda, one teaspoon baking powder. Sift all together and add to mixture one and one-half cup soaked dried peaches, one-half cup raisins and one-half cup of molasses. Add water or milk to make a thick batter, turn into a buttered mould and steam one and one-half hours. Finish in a hot oven 15 minutes if preferred.

#### Barley Muffins

One cup barley meal, one cup flour, one tablespoon sugar, one tablespoon butter substitute melted, one teaspoon salt, two heaping teaspoons baking powder and one cup of milk or water. Mix and sift dry ingredients; add milk gradually, and butter, bake in muffin pans in hot oven 25 minutes. Rye or milo meal may be substituted for barley meal, and we prefer them without sugar.

#### GOOD THINGS FROM BARLEY, CORN MEAL AND BRAN

Written for California Cultivator  
By Z. U. Lescher, Carpinteria

#### Barley Nut Loaf

One egg, one cup ground walnuts, one cup sweet milk, one-third cup sugar, two and one-half cups barley flour, one teaspoon salt, three teaspoons baking powder. Make into a

#### OUR HOUR OF TRIAL

Now is the hour of our testing.  
We must save, serve and sacrifice.

If we are selfish or even careless, we are disloyal; we are the enemy at home!

"Food Will Win the War!"  
Whose food, German or American? The world awaits your answer.

We must save, serve and sacrifice.

loaf, bake in a moderate oven three-fourths of an hour.

#### Corn Bread—or Johnny Cake

One egg, one-third cup sugar, two cups sour milk, two cups corn meal, one cup rolled oats, one teaspoon soda, salt, soak the oats in the sour milk an hour or so before mixing.

#### Bran Muffins

One egg, one-third cup sugar, one cup sweet milk, one cup bran, one-third cup flour, two-thirds cup corn meal, one tablespoon vegetable oil, two teaspoons baking powder, a little salt. Bake in gem pans about 20 minutes.

#### OAT MEAL BREAD

Written for California Cultivator  
By Mrs. J. F. Cox, Puente

One yeast cake, two cups and a half of potato-water. One quart wheat flour, one large potato (use more or less as one wishes) mashed, one tablespoon sugar, one scant tablespoon salt. Put yeast to soak in lukewarm water then add a little flour or potato and let raise until light. Grind the oat meal in a food grinder. Add salt and sugar then scald with potato-water. Let cool until just warm then add yeast and the wheat flour. Knead and let rise then put into loaves in pan, let rise then bake one hour. This makes two large loaves or three small ones. Better than wheat bread.

If children are inclined to be constipated they should have plenty of laxative foods. These are cereals, particularly oatmeal; the coarser breads, such as graham and whole wheat; fruit or fruit juice, particularly oranges and prunes; and vegetables like string beans, asparagus and spinach.

# Farm for Profit

## and Help U. S. Win the War

Authoritative tests have proved that as high as 50 per cent increase in crop production may be expected from proper use of fertilizer. Do you realize what that increase means? Fertilizer is the basis of crop production, and compared to the prices of the crops they help to produce, fertilizers were never so cheap as they are today.

## MORE CROPS

will be raised in America this year than ever before. Make every acre you own or rent, produce to the limit. Fertilize your land—the increase in yield and price of crops will more than pay all the fertilizer expense—it will enable you to farm with profit. Don't spend your time working worn out land. Make it pay—Fertilize with Hauser's Organic Fertilizer.

**RICE**  
The United States food administration has fixed maximum prices on California rice as follows: Rough rice, lb., 3.9 to 4c; clean rice, lb., 6.9 to 7c.

**HAY**  
Under date of February 23, Scott, Magner & Miller says:  
Receipts for the past week, 583 tons. We have had during the week fine rains throughout the entire state. The dry sections have been well soaked, and those sections that were favored with rains heretofore have received enough now to keep things going for the next 30 days at least. This assures plenty of grass on the ranges shortly. It will be the means of carrying through much stock that otherwise would have perished. The effects of the weather on the hay held back by farmers, lest they might require it for their own use, has been quite marked. Offers ranging from ten tons up are coming from many sections. This probably will increase the available stocks on hand and grass will decrease the demand materially.

Wheat — Government prices: Common white hard, base price is \$3.50 per central, or \$2.10 per bushel of 60 pounds delivered in terminal warehouses in bulk; soft wheat, base price 2 cents per bushel less, or \$2.08 per bushel; white club (including Sonora), \$2.06 per bushel. If wheat, after cleaning, weighs 60 pounds or more to bushel, base price stands; if 58 to 60 pounds to bushel, 3 cents per bushel reduction; if 56 to 58 pounds, 6 cents per bushel less; if less than 56 pounds, grain becomes sample grade and sells on its merits up to within 1 cent per bushel of 56-lb. wheat. Sacked wheat 4 cents per bushel more, less tare for weight of sacks.

**FEEDSTUFFS**  
These prices applicable to San Francisco, with \$1.00 less at Sacramento and Stockton, are for cash at the mill in carload lots, and include sackage, with an additional rate of 50 cents per ton in less than carload lots.  
Wholesale prices per ton. Prices fixed by food administration as San Francisco price; Sacramento and Stockton \$1.00 less on carlots at mill door:

**Citrus Fruit Market**  
Los Angeles, Feb. 27, 1918.  
The rains have slowed up shipping, and the few oranges reaching market are quickly picked up at long prices. Even storage Valencia are bringing sometimes well up toward \$5.00. Lower quality fruit, however, sometimes goes below \$2.00.  
Lemons are hitting the entire scale from below cost of packing and shipping to around \$8.00 and \$9.00, the lowest priced fruit being that which has been injured by freezing in transit.

**Shipments**  
Shipments of oranges from Southern California to date since November 1, 1917: 4155 cars; lemons, 1054; total, 5209. To same date last season: oranges, 8236; lemons, 1831; total, 10,067. From Central California this season: oranges, 1883; lemons, 106; total, 1989. To same date last season: oranges, 4029; lemons, 154; total, 4183. From Northern California this season: oranges, 202; last year, 842.

Boston: 4 cars. Nav. \$4.05-\$5.15, lem. \$8.45.

**MARKET NOTES**  
The citrus fruit shipments of California in February, 1917, exceeded 4000 cars. This year it will be far below half that.  
Motor truck marketing of hogs by Nebraska farmers has more than doubled during the past year.  
Owing to high prices of barley and other stock feeds it has been suggested that stock feeders feed heavier of oats. Does anyone know of cheap oats?  
Feeders at the Union Stockyards, Portland, have been paying four and a half cents per pound for corn, three cents for barley and five cents for wheat.  
The cantonment at American Lake, Washington, is feeding 5000 hogs, largely on the wastes of the camp.  
There were about a half million less hogs in the stockyards of the large centers of the United States at the end of January, 1918 than there were on the same date 1917.

Of cold storage butter on February 1, 1918 there was 1,132,234 pounds, a decrease of 31.9 per cent during the 12 months. On the other hand, cheese shows a storage of 4,100,326 pounds, or an increase of over 69 per cent.  
An idea of the horse markets of the country is given in an item in the Breeders Gazette which shows the receipts of horses at various markets for the year 1917 were as follows: East St. Louis, 279,857; Kansas City, 127,823; Port Worth, 115,233; Chicago, 107,511; Jersey City, 70,258; Nashville, 63,023; Oklahoma City, 62,306; Indianapolis, 61,692; Memphis, 60,848; St. Joseph, 33,504; Omaha, 32,781; San Antonio, 31,898; Sioux City, 29,391; Pittsburgh, 29,229; Cincinnati, 27,279; Watertown, 22,084; Denver, 19,758; Wichita, 19,312; El Paso, 15,052; Louisville, 14,127; Amarillo, 13,367; St. Paul, 9959; Buffalo, 8532; Knoxville, 8254; New York, 7574; Baltimore, 7442; Spokane, 7092; Portland, 6933; Pueblo, 6665; Philadelphia, 4217; Albany, 3303, and New Orleans, 2614.  
Post card reports to the bureau of markets of the United States department of agriculture show shipments from California during the week ending February 4, approximately as follows: Apples, 3 cars; artichokes, 1; celery, 33; cabbage, 7; cauliflower, 134; carrots, 4; dried apples, 1; dried apricots, 1; dried beans, 31; dried peas, 1; dried peaches, 12; dried pears, 1; dried prunes, 17; lettuce, 78; mixed vegetables, 72; mixed fruit and vegetables, 11; mixed dried, 3; onions, 5; potatoes, 87; raisins, 58; tomatoes, 1; turnips, 3.  
Transportation experts are advising canners and fruit and vegetable shippers to lay in stock of shook and all supplies for next season's work. Presumably cars will be far more scarce in midsummer than at this moment.

# Legal Queries

Louis B. Stanton, attorney, 243 Wilcox Building, Los Angeles, will answer legal queries in this department.  
Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When replies are wished in Cultivator address query to 115½ N. Broadway, Los Angeles.

**Estate Conveying Real Estate**  
A has three heirs, wife and two married sons. He sells real property on contract of sale payable in installments; prior to the expiration of the contracts A dies. When the party completes his payments how can the deed be made? What are the proceedings if A makes a will to the heirs? They would be the only heirs whether or not a will was made. Could the heirs all sign a deed and make a valid conveyance of the property? Does dying testate or intestate make any difference?—Subscriber, Lamanda Park.  
Insofar as the conveyance to the contract purchaser is concerned it makes no difference whether or not a will is left. In order for him to procure a valid unclouded title it will be necessary to have the estate probated whereupon an executor or administrator is appointed. Thereupon petition of either the administrator or the contract purchaser showing that the deceased entered into the contract and that the purchaser has made the stipulated payments, and after due course the court makes its decree ordering the administrator to execute the conveyance.

**Leasing Property Bought Under Contract**  
We own a ranch clear of encumbrance of which we sold ten acres in installments to X. Can X lease this land for the development of oil prospects thereon without our consent? The drilling for oil might injure the land for farming. If he can lease would he not have to pay us the full price of the land before he could take any of the oil royalties himself? How are we going to be protected? Could not we lease this land to the oil company taking all moneys until our full installments are made and X gets his deed and then turn it to him?—Subscriber, Lamanda Park.  
You do not state the title which X holds; it is presumed that he has the ordinary installment contract of purchase. Holding such you remain the holder of the legal title to the property and X holding only an equitable title as the word "equitable" is used in common parlance. Not holding the legal title to the property, it is extremely doubtful if X could make a valid lease thereto of any kind. He has no right to permit the commission of acts which so diminish the value of the property as to impair the vendor's security. The vendor would in the stated case have probably two remedies, viz, ejectment against the oil company as for an unlawful trespass and injunction to restrain waste

against the vendee and the oil company. The vendor cannot be required to take his money before it is due according to the contract; such contract can, with mutual consent be altered so that either of the methods suggested could be carried into effect.

**Outlawing of Note or Agreement of Sale**  
I hold a note payable in three annual installments. Is it the law in this state that each installment outlaws if not paid within four years from its maturity, or does the entire unpaid principal of the note continue valid and unimpaired until four years after maturity of the final installment? Would the same apply where instead of a note the document is an agreement for sale of real estate? — Subscriber, Bakersfield.  
The statute of limitations begins to run against each installment from the time when an action might have been brought. This is true of the right of action of the holder of the note no matter whether secured by mortgage, or whether the promise is contained in an agreement. Upon the other hand, if the mortgage or agreement has been recorded the vendee under the contract, or the mortgagor cannot quiet the title against the creditors to the property, nor, if the creditor under such recorded instrument, gets into actual possession of the real property, can they get him out by ejectment. The debtor in such cases has two methods of procedure, first, he can pay his debt in full, second, if he has resided upon the property, and paid all taxes and fenced and improved the property for a period of over five years after maturity of the lien he could probably maintain title by adverse possession.

**THE RESOURCES OF THE UNITED STATES**  
Seven per cent of the world's area.  
Six per cent of the world's population.  
Seventy-five per cent of the world's corn.  
Sixty-six per cent of the world's cotton.  
Sixty-six per cent of the world's petroleum.  
Forty per cent of the world's iron.  
Forty per cent of the world's coal.  
Thirty per cent of the world's manufactures.  
Twenty-five per cent of the world's wheat.  
Forty per cent of the world's railways.  
Thirty-five per cent of the world's banking power.  
Thirty per cent of the world's wealth.

**SPERRY'S NEW VALLEJO MILL**  
The Sperry Flour Company has at Vallejo a mill just completed which turns out in one day 4750 barrels of American Indian flour. But 4750 barrels expresses but little to most of us. Perhaps a better idea is had when we say that this one day's run of this one mill results in turning out sufficient flour to feed 5000 Sammies for 12 months. And to make that amount required 20,741 bushels of wheat. The Sperry's is a great California institution, with mills in almost every corner of the state.

**540 Egg "Pioneer" \$20 Down**

then \$10 per month for four months. The "Pioneer" is the best and highest class hot water incubator made in America. Send today for free illustrated catalog.

**BABY CHICKS! BABY CHICKS!**

We hatch 19 varieties of chicks, ducks, geese, turkeys, etc. Send for free 66 page illustrated catalog. Our Leghorns are all hatched from eggs from O. B. Hubbell, Van Nuys Ranch, no better stock in Southern California. Every Hen Hoganized twice in 1917. Write us your wants. No order too large, or small.

Also first-class Orchard, Bean and Sugar Beet land. Twenty acres and up with easy terms of payment.

**BRENTWOOD IRRIGATED FARMS,** In Contra Costa Co., 63 Miles from San Francisco For Price and Descriptive Matter Address

**BALFOUR, GUTHRIE & CO., LAND DEPT., 350 California St., San Francisco**

"HOW can I be reasonably sure that my chicks will develop into hardy, healthy chickens?"

A natural question—and the answer? Just this:

Keep them busy, happy and hungry. Freedom and exercise are important. You will be amply repaid for close attention to the wants of these youngsters. The foundation of their lives—of their future egg production—*of your very profits*—is laid in the first few weeks.

No matter what your methods may be—remember that you can depend on Sperry Gritless Baby Chick Feed to produce results. It is clean, uniform, properly granulated and proportioned.

It provides in confined quarters the same food values and constituents that the mother hen will scratch for her chicks if allowed to roam in the yards and fields.

Experience has taught you that to make money in the chicken business you must save a big percentage of each hatch. So—why take chances? Give your baby chicks exactly what they need—Sperry Baby Chick Feed—a perfectly mixed ration that is based on the *practical findings* of the most successful poultry experts and raisers.

The new edition of our booklet, "Makes Hens Happy," takes up this question in detail—tells how to boost your poultry income. Thirty-two pages full of practical hints and profit-pointers. No one knows so much about the poultry business that he can afford to be without this book. Just write your name and address on the chick—and we'll send the book free.

## Some of the Features at Great National Show

The National Orange Show, an annual event for seven years now, has secured a reputation as a "rain maker," second to none. This year was no exception and a wonderful blessing was poured out on needy California soil. Notwithstanding this storm nearly all the week of the Orange Show a wonderful exhibit called out almost record attendance.

# Guaranteed to Do Satisfactory Work on Your Farm

## THE SANDUSKY TRACTOR

"THE LITTLE FELLOW WITH THE BIG PULL"

### Emil Steege Says:

"This fall I threshed 20 days with 400 gallons of fuel and 50 gallons of oil. I pulled a 33-inch separator and kept 8 teams busy. I broke 80 acres last spring in 4 days, using 100 gallons of fuel and 10 gallons of oil, pulling 4 breaker bottoms, and I pull 6 bottoms when plowing.

"Plowed 300 acres last spring and threshed for 30 days in the fall of 1916. It is lots cheaper than horses or steam power. I sure like my Sandusky very much; also the treatment I have had from the company.

"The tractor will do a lot more than it is guaranteed to do, and it is very simple to operate. I do not hesitate to recommend it to anybody in the market for a tractor."

(Address upon request.)

You realize the advantages in good tractor farming--the saving in labor, lower maintenance cost than horses or mules, more timely and better prepared seed beds, resulting in bigger and better crops.

These things are apparent to the farmer of today, and we believe that the only reason for delaying the purchase of a tractor is—"Will It Work Satisfactorily On My Farm?"

The intelligent man knows that a tractor can't do the impossible, regardless of claims. We have appreciated this for many years. Realizing our own responsibilities in selling a Sandusky Tractor, and standing back of every machine as we do, it has always been our policy to fully determine each prospect's local conditions and requirements before recommending the purchase of a Sandusky Tractor.

This enables us to know positively that "The Little Fellow With The Big Pull," either the 10-20 Model J or the 15-35 Model E, is satisfactorily and profitably adapted to your requirements, and consequently "Our recommendation is an unqualified guarantee of satisfactory work on your farm."

## TRY IT ON YOUR OWN WORK

Is substantiation of this policy and as a further safeguard to your interests, all Sandusky Tractors, whether sold direct or thru a Dealer's Sales Room and Service Station, are delivered subject to satisfactory demonstration. A specially trained serviceman will personally instruct you in its care and operation. If for any reason it is impossible to fulfill our guarantee on your work, the tractor is taken off your hands and the purchase price refunded.

## GUARANTEED FREE SERVICE

Each Sandusky Tractor further carries a definite and specific guarantee of free service. This ensures you efficient help and advice whenever wanted and completes a policy which absolutely protects your interests from every conceivable angle.

Write today for a copy of "Power On The Farm," issue J-75 or E-75, or both. It covers all details of design, construction, ability, guarantees and policies. Fully outline your requirements--the number of acres under cultivation and to be cleared, character of soils, crops, per cent of grades encountered both on the farm and on the road, together with your belt power requirements. We will gladly analyze this carefully, making a personal inspection if necessary, and advise you without obligation. Investigate now so as to ensure delivery when you wish it.

## Long Staple Egyptian Cotton

Greater Difficulties in Growing, but it is Profitable and Offers a Field of Endeavor Which is Not Had by Cotton Growers of the South. Cultural Directions by Two Practical Growers

### EGYPTIAN COTTON

Written for California Cultivator  
By Glenn O. Thrailkill

**T**HE present high price paid to growers of Egyptian cotton and the profits made from the crop of 1917 has created extensive interest in this practically new crop.

The climatic requirements of this crop restrict its successful production to a relatively small area in California and Arizona. In this area it is one of the most profitable and popular of crops. While Egyptian cotton is a profitable crop under normal conditions, the present price has made it exceptionally so.

The prospect of continued high prices for this cotton has caused many farmers in the Imperial and Palo Verde Valleys to plow up stands of alfalfa and plant cotton. Also many acres in the San Joaquin Valley are being planted to Egyptian cotton this year. Though this is a new crop in this valley the climate is favorable, and more than a bale of Egyptian cotton was grown on an experimental acre on the Kearney experiment farm in 1917. There is no reason why this crop should not be successful there.

While Egyptian cotton is strict as to climate, requiring eight or nine months without frost to mature the entire crop, it is not extra strict in its soil requirements, but produces well on all soils from sandy loam to clay. It is quite tolerant of alkali but does not produce so well on alkali land as it does on soil free from alkali.

Cotton will produce to some extent on poor soil and with very careless farming, but the profits are being made by farmers who give the proper cultivation and irrigation to crops planted on good soil.

Cotton is not a fool proof crop and requires knowledge of its special requirements as well as general farming ability to secure the maximum yield. Cotton repays handsomely by increased yield for good soil and cultivation and is deserving of the best soil and care. As a yield of three-quarters of a bale per acre will give double the profits that a half bale per acre would, it will pay those growing cotton to give the crop the study and care necessary to produce the maximum yield.

#### Planting

Cotton is planted in rows 42 inches to 48 inches apart, generally 42 inches. It requires 30 to 40 pounds of seed per acre, which is planted from one to two inches in depth. In Imperial Valley planting begins about the last week of March, or as soon as danger of a late frost is past. As early plantings produce best some farmers plant earlier expecting to replant in case of damage by a late frost.

Where much cultivation is necessary to keep down weeds planting on the flat is advisable. Where water is plentiful and cheap and labor is scarce cotton is planted on the ridges of listed soil, and generally too much irri-

gation and too little cultivation is given.

The soil should be well tilled and receive a heavy irrigation just previous to planting. As soon as the soil will work conveniently the seed bed is prepared and the cotton planted.

With flat cultivation, disking and harrowing just ahead of the planter is best, while with planting on the ridge the top of the ridge is dragged or harrowed lengthwise of the row. This leaves a seed bed with good germinating conditions for the seed, and with careful replanting should not be necessary.

Cultivate as soon as the plants are safely established and repeat cultivation as often as necessary to maintain a good mulch on the surface. There should be a good supply of moisture in the soil previous to planting and this moisture must be conserved to produce the best results.

During the early experiments of Egyptian cotton plants grew to enormous size but produced little crop. This rank growth of vegetation has been reduced to some extent and the production increased in the varieties now grown. It is, however, still necessary to control the growth of the plant to secure the best results. This control is secured by the space allowed each plant and the time and amount of water given the plant.

On rich soil or old alfalfa land plants should be left from six to eight inches apart. The excess of nitrogen in this soil tends to promote a very rank vegetative growth if the plants are given too much space. The leaves shade the main stalk and the flowers on the interior fruiting branches,

thereby reducing the yield as well as making picking difficult.

On soil not so rich each plant should be allowed a larger space from which to draw nourishment. The maximum space between plants on any soil is 16 inches. On extremely poor soil the plants are left closer together to allow a greater number of plants on each acre. Cotton sends its roots deep for food but it does not spread laterally to any great extent, and can safely be spaced ten inches apart on the poorest soil.

#### Irrigation

The cotton plant has a tap root from which little feeder roots are extended to gather feed and moisture. Without moisture the plant food in the soil is not available to the plant.

The soil should be as moist as possible yet work conveniently at planting time. As the moisture near the surface is exhausted the plant is an effort to obtain food sends its tap root down rapidly to the moist soil below.

This forced root development is desirable for several reasons. During this period the growth of the vegetative branches is checked. During the fruiting period there is less foliage or surface for evaporation, therefore, more of the energy of the plant is devoted to fruiting purposes. The larger root system secures food from a greater depth, and in case there is a period during which water cannot be obtained for irrigation the plant will not suffer as it would were its main feeding roots developed near the surface. There is also less danger to these small lateral roots during cultivation.

The first irrigation after planting

should not be necessary until from 50 to 60 days after planting. The time of this irrigation is determined by the condition of the plants. In a hot climate it is to be expected that the plants will wilt during the heat of midday. When any considerable wilting can be noticed in the early forenoon it is time to irrigate regardless of date. Don't delay until the plant blossom yet withhold water as long as you can at this time without dwarfing the plant.

With the most careful irrigation there will at times be water left at the lower end of the land. Unless drained this over-abundance of water will produce large plants on which the quality of staple will not be up to the average. Proper drainage should be arranged.

Cultivate as long as practical with the walking cultivator and "lay by" the crop with the wing sweep, leaving a good furrow for later irrigations.

Note: The best time for chopping is not definitely settled. Chopping early is advisable on poor soil. On rich soil late chopping helps check the excessive growth of vegetation.

### PIMA COTTON CULTURE

By F. W. Waite, at Imperial Agricultural Assembly

In the selection of land for growing Pima Egyptian cotton it might be well to mention that alfalfa or good grain land is suited to growing this cotton. The success of growing Pima cotton depends more on the proper thinning and irrigation than with the short staple variety.

The first step is to plow the land deep, excepting old alfalfa or Bermuda grass, which should be plowed shallow; about four inches deep in the early winter and later about six inches deep; disk thoroughly to break the soil up well. Lands other than Bermuda or alfalfa need but one plowing. Then it should be well soaked with water, getting the water down as far as possible. As soon as the soil will allow, run a smoother over it and disk the soil to a fine mulch. Go over the land with a harrow to smooth the ground. These operations may be varied depending on the kind of soil and method used in planting. The success of a good stand depends on moisture, which is absolutely necessary.

There are several ways of planting, which should be done from the 15th of February to the last of March, either on the level, in the furrow, on the ridge or either side of the furrow, known as bed planting. The distance apart depends somewhat on the kind of soil; the stronger the soil the further apart should be the rows and the plants in the rows should be further apart. Some recommend rows as close as three feet and plants from four to six inches in the row.

This season a man in Yuma Valley with 35 acres of Egyptian cotton planted five by two and one-half feet apart and picked a bale and one-fourth to the acre. This owner says he will

### AWARDS TO BE MADE AT DAIRY CONFERENCE

The presentation of prizes won by the dairy farmers and breeders who have participated in the State Dairy Cow Competition, 1916-1918, will be the central feature of the Dairy Farmers' Conference to be held at the University Farm, Davis, on March 15-16. These awards aggregate over \$7,500 in value and include numerous cash prizes and special prizes of bull calves, cream separators, milking machines, a carload of beet pulp, besides two gold medals and six silver trophies offered by the various dairy breed associations. The prizes are given for the highest production of butter fat by pure-bred or grade cows for periods of ten consecutive months and will be presented to the winners by Dean Thomas F. Hunt of the College of Agriculture at the evening session of March 15.

Aside from papers and discussions relating to the Dairy Cow Competition, a number of addresses on various phases of California dairying under war-time conditions will be given by members of the staff of the College of Agriculture and other wellknown speakers. A postal card addressed to Professor F. W. Woll, University Farm, Davis, California, will bring the detailed program of the Conference by return mail. Dairy farmers are urged to attend the Conference and learn how to meet the problems facing the industry at the present time and how dairy cows are fed and handled for the greatest profit.

#### PROGRAM

Friday, March 15, 10:00 a. m.  
Address of Welcome: Dean H. E. Van Norman.

War-Time Rations for Dairy Cows: F. W. Woll.

The Creamery Patron: S. H. Greene.

The Production of Market Milk: C. L. Roadhouse.

2:00 p. m.—Lecture and Demonstration: Conformation and Production: G. H. True.

7:30 p. m.—The Marketing of Milk: Elwood Mead.

The California State Dairy Cow Competition: F. W. Woll.

Presentation of prizes offered in

the competition: Dean Thomas F. Hunt.

Saturday, March 16, 9:00 a. m.  
How My Cows were Fed and Handled: Ten-minute Talks by Prize Winners.

The Supervisor of Dairy Tests: A. L. Ingebritson.

Raising Dairy Calves: C. V. Castle.

The Breeding of Pure Bred Dairy Stock in California: Frank L. Morris.

2:00 p. m.—Lecture and Demonstration: Diseases of Dairy Cattle; Tuberculosis and Abortion: F. M. Hayes.

# CITRUS Trees

The Orange, the Lemon, the Grape Fruit, the Lime, the Citron, are all treated at length in our 1918 Catalogue, which every Orchardist should possess.

**P**LANTERS WILL find it greatly to their advantage to buy from a large, well-cared-for Nursery like ours, where all the conditions are right for growing Nursery Stock.

We have some exceptionally fine Citrus trees this season, upon which we will be glad to quote prices on application.

The demand this year, as you know, has been very heavy for trees of all sorts, and we, therefore, suggest that you anticipate your probable needs, placing orders with us at once.

**NOTICE:** If you haven't already received a copy of our 1918 96-page Catalogue, be sure and write for it—"A real hand-book of useful information to the Horticulturist."

**Fancher Creek Nurseries**

## Citrus Orchard Practice for March

By G. G. Laidlaw, at Claremont Pomological Club, February 23

**L**ONG continued experience, in citrus fruit culture, emphasizes the fact that the month of March is the time of year requiring the greatest skill and intelligence and promptitude on the part of the grower in all his operations. You may procrastinate in February, but woe be unto you if you continue in March. The character of the soil and the availability of the water supply will necessarily influence the nature of the work.

Certain principles I endeavor to follow in my own practice for this season are: First, to apply to the soil every bit of organic matter available. Second, if the soil is too dry to plow well, irrigate. If it is the intention to use a tankage apply broadcast then thoroughly disk all the ground both ways and on each angle. Then plow in the direction of your irrigating furrows. Never plow when the soil is too sticky or too dry, and plow only once about two inches deeper than you are accustomed to cultivate. Follow this promptly with sufficient harrowing, disking, cultivating, to put the soil into a good tilth and keep it so. Cultivation unquestionably stimulates root activity and renders available the food. This is the season of the year when a heavy strain is about to fall on the trees in the spring growth and bloom and it is our duty to make soil conditions as favorable as possible inasmuch as we cannot control climatic conditions.

More and more we begin to see that the June drop is aggravated by the lack of an adequate and readily available moisture and food supply. I am willing to advance the proposition that if it had been possible to maintain a full irrigation head of water during the hours of hot sunshine from June 12 to 18 of last year, a normal crop would have set on that acreage. It was simply a case of failure on the part of the root system of the trees

to extract sufficient moisture and nutriment from the heated soil to compensate for the tremendous loss by transpiration from leaves and fruit. We should apply ourselves to this problem. We note that invariably, where the trees were healthy at the lower end of the grove and had been basined to catch the runoff, there you will now find the most fruit.

It may be accepted as a fact that wherever the root system is repressed by bad soil conditions such as shallow soil, coarse texture, lack of humus, too much or too little air, moisture and fertility, the very minute, invisible, fine hair roots which alone are capable of taking up the food held in solution of the soil water will fail to function and the fruit will weaken and drop. The problem of satisfactory fertilization I hardly dare mention. For myself I have reverted to the principle of securing the most nitrogen and humus for the least money.

Another matter should have our attention this month is the treatment of gum diseased trees with Bordeaux or their replacement when the disease is too far advanced.

Having done all these things count yourselves unprofitable servants if you make not a good beginning on the annual spring pruning. First, go over the grove and remove all undesirable live growth, spacing the branches and giving to each its "place in the sun," the fine dead wood you may safely leave for some more convenient season if you have not the wherewith to hire it done.

Now, in concluding these suggestions for March I have a subconscious feeling that I have contributed nothing new and if I had, it probably would not be true. With Omar Khayyam one may well say, "Myself when young did eagerly frequent doctor and saint and heard great argument about it but evermore came out by the same door wherein I went."

## Fungicide and Insecticide Formulas

By F. H. Chittenden, Entomologist in Charge of Truck Crop Insect Investigation, Bureau of Entomology, U. S. D. A.

**B**ORDEAUX mixture is used for the control of fungous diseases of many vegetables and fruits and as a deterrent of flea-beetle attack. It can be purchased in convenient package form from seed dealers or prepared at home from bluestone (copper sulphate), which costs 10 to 25 cents per pound, and fresh stone or lump lime (quicklime).

Bluestone, four ounces; quicklime, four ounces; water, 12 quarts; or bluestone, four pounds; quicklime, four pounds; water, 50 gallons.

Dissolve the bluestone in a wooden or earthenware vessel, using hot water. Dilute with half the water. Do not use tin or other metal containers, as they would be spoiled. Slake the lime by adding water, a little at a time. When reduced to a milky fluid, dilute with the rest of the water and strain through doubled cheesecloth or a brass wire strainer of 18 meshes per inch and pour it into the bluestone solution. Stir well and apply at once. This is best when prepared fresh for each using.

Usually it is difficult to get fresh lime at short notice, as needed. To save trouble, the owner of a small garden may weigh out at one time several four-ounce lots of lime, perhaps as many as he expects to use during the summer, slake them in old glass jars, cover with water, and set them away. The lime will remain in good-condition as long as it does not become dry, and each jar is sufficient to use in making a pailful of Bordeaux mixture, or one filling of the average small sprayer. Those who have to spray large fields or orchards should consult Farmers' Bulletin 243.

**Bordeaux Mixture with Resin Fish-Oil Soap**

Resin fish-oil soap is added to the Bordeaux mixture to make it stick to plants, especially those with smooth leaves.

Add to the foregoing formula resin

fish-oil soap, two-thirds of an ounce to one ounce per gallon. It is necessary to add water to the soap, a few drops at a time, stirring well until the sticky soap is dissolved. This soap can be purchased of most dealers in garden supplies.

### Kerosene Emulsion

Kerosene-soap emulsion is a remedy for most sucking insects.

This is made by combining one gallon of kerosene and one-fourth pound of laundry soap, or one pound of whale-oil (fish-oil), or other soap, or one pint of soft soap, with half a gallon of water. The laundry soap, if dry, is shaved and dissolved in boiling water and then poured (away from the fire) while still boiling hot into the kerosene. The mixture is then churned rapidly eight or ten minutes, the liquid being pumped back upon itself by means of a sprayer with a nozzle throwing a strong, solid stream. At the end of this time the mixture has become a thick cream—the stock emulsion. In the preparation of the emulsion a sprayer is a necessity, since if it is not made as directed a perfect emulsion will not be formed. If properly prepared, this stock emulsion will keep through a season and is to be diluted only as needed for use. For most species of sucking insects one part of the stock emulsion should be mixed with 15 parts of water. It is then applied with a fine nozzle in the form of a mist spray, or like a dense fog, and is sprayed only long enough to cover the plants.

If the spray is not applied properly it may drip off the leaves, causing the ground beneath to become soaked. As a result delicate plants when exposed to direct sunlight may be injured or killed. For this reason nicotine sulphate is preferable.

### Lead Arsenate

Paris green, formerly much recommended for biting and chewing insects, such as the Colorado potato

**USE THE WESTERN PULVERIZER, PACKER AND MULCHER**

**3 MACHINES IN 1**

for preparing your seed bed, will increase your crop 25% whether you raise wheat, barley, sugar beets, beans, potatoes, alfalfa or any other crop. A perfect, well pulverized and firm seed bed is as important for one crop as for another. The Western pulverizer and packs as deep as plowed and leaves a loose mulch on top to protect the moisture; saves 1-3 of expensive seed and time, labor and horse power in preparing a seed bed. It is especially adapted for breaking crust and cultivating winter wheat in the spring, or for breaking crust on sugar beets or beans either before or after they are up without injury to the plants. **MADE IN 12 SIZES, FOR HORSES OR TRACTOR USE, IN 1 AND 3 SECTIONS**

1918 crop will bring war prices; make it a record breaker in size by using the Western. Send for our free illustrated catalog, giving full description of the machine and its work, also dealer's name and much other valuable information.

**(AMERICAN SURFACE PIPE)**

beetle, cucumber beetles, cabbage worms, and tomato hornworms, because it was known to most farmers and is for sale at drug stores, is being superseded to a considerable extent by other arsenicals, of which the most important is arsenate of lead or lead arsenate.

The present high cost of all copper compounds has resulted in a similar high price for Paris green. Although arsenate of lead has also risen in price it is less costly and is preferable for the following reasons: (1) It serves the same purpose as Paris green against external leaf-eating insects; (2) it is applied in the same manner; (3) it is less harmful to growing plants, being less likely to burn delicate foliage; (4) it adheres better to the foliage; (5) it is less troublesome to prepare; and (6) the white coating which it leaves on the plants after spraying shows which plants have not been reached by the treatment. Lead arsenate, however, does not kill insects as quickly as Paris green, although the fatal dose is absorbed nearly as soon.

Arsenate of lead is sold in both powder and paste forms. At the rate of two pounds of powder or four pounds of paste to 50 gallons of water or Bordeaux mixture solution it will destroy cabbage worms and most other caterpillars, the "slugs" and adults of the Colorado potato beetle, cucumber beetles, and most other insects of this nature.

In small gardens two-thirds of an ounce of the powder form, or ten level teaspoons, to one gallon of water is used.

Generally, the adhesiveness of lead arsenate is enhanced by the addition of a "sticker" of about the amount by weight of resin fish-oil or other soft or dissolved soap as of the arsenical used. This must be used in the case of cabbage and similar crops, since otherwise the waxy bloom of the foliage repels the liquid, causing it to gather in large drops, and a thorough distribution, on which the success of the treatment depends, is not secured. If properly applied, the leaves should show a thin, white coating of the poison for a long time.

The number of sprayings to be applied will depend on the insect concerned in the injury, and on local and seasonal conditions. Sometimes a single application at the proper time will suffice, although two or three are required for the cabbage worm, potato beetle, and certain other insects which produce more than one generation annually.

#### EFFECTIVE QUARANTINE

State Entomologist A. W. Morrill of Arizona is plainly doing some good work for Arizona agriculture in the citrus canker fight. Commissioner Hecke of California and Entomologist Morrill are working hand in hand and it is thought the barriers erected by these two states may be sufficient to keep out this dread disease. It is levying an awful tax on the groves of Florida and the gulf states.

In addition the pests of Mexico, a menace of citrus and sub tropical fruits, are being given attention. Here is a paragraph from a recent ruling on prohibited shipments into Arizona: "Oranges, guavas and mangoes, grown in the Republic of Mexico, a later Mexican fruit fly quarantine of the federal horticultural board prohibits the importation of grapefruit, sweet limes, archras sapotes, peaches and plums in addition to oranges, guavas and magoes."

Arizona is receiving absolutely no olive trees as nursery stock or cuttings from any section.

"Citrus fruits, trees, plants, seeds, buds and scions are prohibited from all outside sources except that citrus fruits, seeds, buds and scions may be admitted from the state of California.

New Zealand has decided to control the purchase and distribution of its new wheat crop. The maximum government price will be \$1.41 per bushel. Latest estimates give the total amount of wheat land as 293,000 acres and the estimated yield, 30 bushels per acre. New Zealand has lately been importing wheat from Australia.

Our ideas of the millennium are hazy, but we feel certain there will be no alarm clocks there.—Toledo Blade.

## National Orange Show

San Bernardino Succeeds in Giving to the World a Glimpse of the Citrus Industry. People of all Countries were Present.

All California united in the great display of citrus fruits and other products and of implements and methods of work. There was more attention given to quality and commercial display than preceding years and at the same time, the features, which are the strong drawing cards with the public were not neglected. The prevailing idea in the feature was that induced by the present war conditions. In fact one of the most striking features was Riverside's great battleship, an indication of the thought given to things war like.

In other designs, our national shield, the Red Cross, American, French and English flags were all liberally used and in every case most effectively. The engravings shown on the cover are chosen with an idea to show how admirably commercial packs worked into designs, almost as effectively as the more spectacularly built features.

In the matter of judging exhibits, the judges had no small task. The fruits were placed before them with only numbers to mark them. Riverside and Lindsay had it seems, at first, practically tied in the Judges' decision, but as a matter of fact, in final awards, Riverside won by only one-eighth of a point.

There were the usual concessions, exhibits of orchard implements, appliances, etc. and an especially interesting exhibit—in this year of conservation of wastes—in citrus foods and by-products.

### TRACTOR DEMONSTRATION

Plans for the big Tractor and Implement Demonstration and Power-Farming Exposition to be held on the university farm at Davis on April 17, 18 and 19 are progressing in a manner that indicates that this will be the biggest event of the sort ever conducted west of the Mississippi River.

At the annual meeting of the California Tractor and Implement Association, recently held in San Francisco, W. H. Gardner of the Yuba Manufacturing Company, formerly vice president of the association, was elected president. C. E. Witherell of the Samson Sieve-Grip Tractor Company was elected vice president and G. M. Walker of the Holt Manufacturing Company was re-elected secretary-treasurer. At that meeting the association, which has a membership of practically all the tractor and implement manufacturers and representatives on the Coast, and under whose auspices the coming demonstration is to be held, voted an expenditure of several thousand dollars for an extensive publicity campaign, which will advertise the demonstration through the newspapers, farm journals and country weeklies and through posters placed in every railway station and various other means.

More than 40 tractors will take part in this demonstration on the university farm. Behind them will be hitched plows, harrows, land levelers, and every other kind of tractor-drawn tool. The original plans for the demonstration, which provided for only a public demonstration of plowing, have been broadened by popular request to include work with harrows and other implements so that the show will have the widest possible educational value.

The association has opened offices in San Francisco in the Monadnock Building and has employed Eugene Smith as business manager.

### COMMANDEERED FARM LABOR

"Leading the horse to water" is easy. Men may be taken from their homes and congenial, profitable employment by the government and under the patriotic impulses that have been stirred by press, public opinion, music, uniform, etc. be made to work up into fine soldiers. The perfect organization and discipline of railroads and other corporations, might handle men against their wills and make them work even more profitably than those of a chain gang, but believe me, when you come to tear people away from the cities and towns, where entertainment, excitement and big pay allure, and force them to go out into

the country and accept such pay, accommodations, work and hours as the average farmer offers, he will surely balk worse than any mule you ever tried to make do the work of two and the farmer will balk much worse and long before your "Liberty Labor" reaches the ranch.—F. L. K.

District No. 70 which recently cleared Butte Slough channel has not had opportunity to test the work of this great drainage proposition, but it is thought that in case of flood, relief will be had in lower flood level.

Hoover says: Food is Ammunition—Don't waste it!

"Double the Use of Vegetables."

Help your country by raising vegetables for your own home and for market. But—to make your garden patch yield its utmost you can't afford to gamble with poor seeds. Play safe—

### Plant Morse's Seeds

soil-tested and pedigreed, large yielding and sure. Morse's Seeds for fields and gardens have been producing profitable crops for farmers for forty years.

Our allied friends in Europe are undertaking measures to plant. We should not neglect this important work. Plant beans, potatoes, etc., if your land is suitable, and right in the bean field plant an orchard, thus enlisting your land for permanent service to a world of hungry people.

Tree Planting has been held back this season by the continued dry weather. Now that heavy rainfall has covered the State get in readiness that piece of land you were thinking of planting.

## It's Not Too Late to Do It

Because the weather man was seeming to plan to checkmate the nurserymen by holding off rain until nursery stock was too far advanced to plant successfully, we have placed several carloads of fine deciduous nursery stock in *Cold Storage*, and have a competent man in constant attendance.

Wire, phone or write for reservation of what you can plant. We will send the trees when you are ready, in first-class condition for planting. You should get a perfect stand and a good season's growth. We have a good supply of trees in the varieties named herewith.

Do you know that we are growing in the San Joaquin and Sacramento Valleys and delivering annually more than *two million* plants to the orchardists and vineyardists of the West?

If it's a big order and you must have *results*, pass it to Kirkman—he will make the delivery *right*. We solicit orders for *commercial plantings*, and will give satisfaction.

## Read What a Few of Our Customer Friends Say:

Sacramento, Calif., Dec. 15, 1917.

Dear Kirkman—Reserve for me the three thousand Orange Cling Peaches for this season.

The sixty-five thousand trees I have bought from you the past seven years are all true to name, and I know I have one of the best orchards in the state.

Yours truly,

EDWARD F. DALTON.

Fresno, Cal., Dec. 29, '17.

Kirkman Nurseries.

Gentlemen—I have just returned from looking over the seventy thousand Calimyrna fig trees I purchased from you for the J. C. Forkner Fig Gardens.

In my judgment these trees are the finest lot of fig trees ever grown in the state of California, possibly in the world.

You are to be commended for the splendid ability and enterprise shown in the growing of such a magnificent lot of nursery stock. Yours very truly

J. C. FORKNER.

Atascadero, Cal., Dec. 6, 1917.

Mr. Kirkman, Jr.,  
Fresno, Calif.

Dear Sir—During the past three years we have planted four thousand five hundred acres of trees from your nursery.

We have been satisfied, not only with the uniformly high grade of stock furnished by you, but even more so with your extremely fair business methods and the high principles which dictate your business dealings.

Yours very truly,

COLONY HOLDING CORPORATION,  
By E. C. Sears, Treasurer.

These three customers have bought a total of more than eighty thousand dollars worth of KIRKMAN TREES. We want your account also and will do our best to hold it year after year.

## Still Better Tillage Tools

Deering—McCormick—Osborne

**H**AVE you seen the New Third Lever on a Deering, McCormick, or Osborne Three-Lever Disk Harrow? It is a depth regulator. With it you raise and lower the inner ends of the disk gangs to meet *all* field conditions. You do this quickly and easily, without in any degree destroying the rigidity of the gangs, for which International Harvester disks have always been famous.

Have you seen the New and Exclusive Attachment of the Tandem? This is another feature we are proud of. The connecting braces tie to both leading gangs, extending from the tandem in such a way that the gangs *must* cut the ridges left by the leading gangs. In turning corners, the sliding connecting braces allow natural flexibility and following of the tandem without crowding sidewise.

International Harvester disk harrows have done top-notch good work for many years. They have built-in weight boxes, adjustable forecarriage, 4-wear wood bushings, tall hard oilers, etc., etc. This year they are simply unbeatable.

When you want seed beds that are right, be sure your tools — disk harrows, peg and spring-tooth harrows, cultivators, etc. — are Deering, McCormick or Osborne. Write us.

## Questions and Answers

ANSWERS BY EDITOR AND STAFF

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

### Winter Crops on Alfalfa

A subscriber has inquired as to growing vetch or other winter crops in alfalfa field and renewing at the same time the alfalfa. The question was referred to Mr. Bomberger of Green Gold Ranch. He writes:

"To grow a crop by disking or harrowing the seed in an old alfalfa field, the crop must be of such a nature that it will start and grow at a lower temperature than alfalfa. For instance, if barley seed is disked or harrowed in during late fall or winter it will make considerable growth during the winter while the alfalfa remains practically dormant; because barley grows at a lower temperature than alfalfa. This too shows the importance of putting in such seed sufficiently long enough before the spring growth of alfalfa starts to give the young barley plants a good start before the alfalfa starts out. Plants that cannot grow at a lower temperature than alfalfa, cannot compete with alfalfa for space, and any seed sown late in winter in an alfalfa field is apt to fail. Another fact to be kept in mind in this connection is that when the seeded-in crop does well, the alfalfa will do correspondingly poorly so long as the seeded-in crop is growing. As a rule the most practical way to renovate an old alfalfa field is to plow it up, and grow other crops for a few years."

### Rabbits Like Beans

Do rabbits bother Blackeye pea vines at any stage of growth? Many in this district would plant if they could be assured that the crop could escape the rabbits. — Subscriber, Fresno.

So far as we have been informed rabbits take pretty nearly everything when it is growing lush and tender. About the only protection from this pest is fencing or organizing a large campaign of poisoning or rabbit drives. Wipe out the pests.

### Land Settlement

The Cultivator has referred to the land settlement commission and its work in the new plot of land selected in Butte County. Nearly every mail brings inquiry as to where to secure information. Write Dr. Elwood Mead, University of California, Berkeley. We may say, however, regarding this land that there are already filed with the commission applications for more land than the commission has to distribute. We believe determining factors in accepting applicants will be general qualifications, farming experience and working capital.

### Goose Eggs

How long does it take to hatch goose eggs in an incubator? When do we have to put in the moisture? Do geese lay every day till they have laid their clutch out or how often do they lay? Should the little ones be kept in a warm brooder, and what should I feed them? — Subscriber, Los Angeles.

It takes 30 days to hatch goose eggs, whether they are under hens or in an incubator. I think that in using the incubator the moisture is put in about the nineteenth day, just as hatching begins, but your direction book will tell exactly. If you have lost your book you can get a new one from the incubator agents. No

one should use an incubator without following carefully the direction in the book.

Geese differ in their laying, just as hens do, but a good goose can generally be counted on to lay every other day. Goslings need a warm brooder the first two or three weeks, but they grow very rapidly and learn to do without heat earlier than chicks would. They are rather slow about beginning to eat. Let them be warm and quiet the first two days or even longer if they do not act hungry. A mash of equal parts corn meal and bran, moistened with water till it is crumbly but not sloppy is a good ration for goslings. Feed four times daily at first. Let them have green feeds as soon as they will eat it, which will not be for a week or so, unless the green is very tender. Goslings are very easy to raise if only they are kept warm and dry. — J. A. K.

### Rough Skinned Fruit

I have quite a number of Washington navel orange trees, the fruit of which is becoming woody and thick rough skinned. I have talked to several horticulturists about this condition and they all seem to give me a different line of treatment. Will you kindly advise me, if it is within your power, what is the proper method to pursue to eliminate this condition. — Subscriber, Sacramento.

This is more of an indication of undesirable type than it is an indication of soil or physical conditions. Of course it may be that in severe climatic conditions it would be impossible to produce a fine thin skinned orange, that is continued cold weather or other conditions which were not suitable to the orange, would prevent high quality, but in the study of sport fruits and undesirable types, which has been taken up by the department of agriculture, through A. D. Shamel, it has been found that fertilizing or giving best of soil tilth is unavailing in correcting this unsatisfactory condition. If climatic conditions are such that these trees should give a thinner skinned, smoother fruit, then rebudding to the smooth, thinner skinned type of fruit is the only procedure.

### Yellow Melilotus

Does yellow melilotus clover cut and cured, make good hay for cows? Feed is so high we feel we must save every item. — Subscriber, Yorba Linda.

Yellow melilotus is not so palatable as alfalfa but makes fairly good hay. Its digestible nutrients are shown to be crude protein, ten; carbohydrates, 35.9; fat, 0.5 and its nutritive ratio 3.7; total, 47. From strict analysis standpoint, it is almost as good as alfalfa hay.

### CACTUS

We note in the Agricultural Gazette of New South Wales, spraying experiments to destroy the prickly pear. Californians have some experience in the matter of disposing of this pest, the usual method here being to fork into winrows and after months of drying, burning the piles. Although slightly more expensive this spraying method, it gives quicker action and use of the land. In spraying, commercial arsenate of soda is used, 20 pounds to 100 pounds of water, but only about 12 gallons used per acre. After a light spraying segments of the cactus being dry and a fibrous or woody structure opens permitting the loss of nearly all of the water from the plants and makes early burning possible. The Gazette says:

"In spraying with arsenic there is great advantage in using a concentrated spray, since water-carriage is

saved and the death of the pear accelerated. Hand labor, however, cannot be avoided; and expensive as this is, there can be no question that it is the duty and interest of every landowner to eradicate the pear from lightly infested country. To neglect it is to tolerate an enemy that tolls every day and every night, increasing in might month by month."

In this connection we may say that California may possibly find use for this pest. We saw only recently, a product of dehydrated cactus leaves, ground into a product somewhat resembling coarse corn meal, containing of course the minimum of water, which it was stated would analyze high and could be sold somewhere between \$20 and \$30 per ton. If this could be made, possibly it will be far better in these times of high priced feed to use the plant this way rather than destroy by poisoning and burning.

Book Review

FARM MECHANICS

Farm Mechanics, Machinery and Its Use to Save Hand Labor on the Farm, by Herbert A. Shearer, published by Frederick J. Drake & Co., Chicago, \$1.00.

A handy little book of large pocket size, 250 pages filled with illustrations of tools, implements and labor saving devices. It is not an edition de luxe, but packed full of helpful hints for every farmer, especially if he has a bit of inclination toward "jack of all trades." There are eight chapters touching upon Shop with Tools for Working Wood and Iron; Farm Shop Work; Generating Power; Driven Machines; Working the Soil; Handling the Hay Crop; Farm Conveyances; Miscellaneous Farm Conveniences and a good index. Preface says: "More mechanical knowledge is required on the farm than in any other line of business. If a farmer is not mechanically inclined, he is under the necessity of employing someone who is. Some farms are supplied with a great many handy contrivances to save labor. Farmers differ a great deal in this respect. Some are natural mechanics, some learn how to buy and how to operate the best farm machinery, while others are still living in the past.

"Some farmers who make the least pretensions have the best machinery and implements. They may not be good mechanics, but they have an eye to the value of labor saving tools."

GRAPE CUTTING

We recently inserted a notice of the fact that the state viticultural commission is distributing cuttings of new grapes and it has been misunderstood by some of our subscribers and the Cultivator has had various requests for these cuttings. Do not write this paper for these cuttings, write E. M. Sheehan, Secretary State Board of Viticultural Commissioners, State Capitol, Sacramento. We may add, however, that we have a letter from Secretary Sheehan stating that more than 850 applications have been made for these cuttings and that the supply is now nearly exhausted. Mr. Sheehan adds "We might add also that a very great number of them referred to the Cultivator and as having seen the published notice of the distribution of cuttings in your journal."

HE STOPPED TO THINK

At the corner of Millwood and Orosi roads in Tulare county, lives Mr. W. C. Stafford, a native son who has basked in over three score and ten years of California sunshine. His chickens roosted in some oaks near the house and nearly every night one of them was carried off with maybe a squawk or two.

Did the old gentleman fuss and swear? Unfortunately a native son cannot swear, so he stopped to think. Ah ha, those who stop to think never fail to win. Some tall poles were erected above the highest limbs and on the tops of these small steel traps were set unbaited. Since then four big owls and two hawks have come down those poles never to again steal chickens which are now almost worth their weight in feed. Contented fowls. Happy old man. Foolish dead birds. He stopped to think—F. L. K.

## Proved Worthy Beyond Question

THREE distinct tendencies in modern motor car construction were visible in the new models displayed at the recent metropolitan automobile shows.

Briefly, these three tendencies were concerned with more efficient power, lighter car weight, and greater economy of operation.

Every one of these qualities has been a pronounced characteristic of Oakland Sensible Six models during the past three years.

The high-speed overhead-valve engine of the Oakland Sensible Six delivers 44 horsepower at 2600 r.p.m., or one full horsepower to every 48 pounds of car weight.

The high carburetion efficiency of the engine gives from eighteen to twenty-five miles to the gallon of gasoline. The 32 x 4 tires, extra large for the light weight of this car, are giving 8,000 to 12,000 miles per tire.

The finely made chassis is a model of simplicity and strength, and the slightly body is swung on long springs over a generous wheelbase, insuring full comfort.

No pains have been spared to make the car handsome in proportion and finish; it is unusually roomy and accessible, and upholstered throughout in genuine leather.

OAKLAND MOTOR CAR CO.

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscribers must have mentioned the Cultivator when writing the advertiser.

**THIS WEEK'S COVER**

The citrus fair holds place of honor on the cover this issue. San Bernardino people have occasion to be proud of their great annual event. This was the eighth show and "best of all" is the least people who attended will say of it. With California's citrus industry bringing to the state from thirty to fifty million dollars annually, it is well worth the honor of this great annual event.

**PLANT NOW**

The deciduous orchardist who has not filled in the vacancies in the orchard, or who has not yet planted the section which he contemplated planting to orchard trees this season should surely get busy. Rains are falling, sun is shining, and buds are swelling, and every deciduous tree should be making root these spring days but it is not too late for the planting which was neglected, so get busy now.

Also citrus orchardists are beginning to think of their extra planting. March is an excellent planting month. Some prefer May, but "do it now."

Recent rains have made possible planting of thousands of acres of orchards which would not have been planted had they not come and the days have been busy.

**R. P. CUNDIFF**

The state has lost one of its most efficient workers. R. P. Cundiff, for 15 years, horticultural commissioner of Riverside County, of which county he was also a pioneer having located there in 1875 and was more recently northern field deputy state horticultural commissioner, as assistant to State Commissioner Hecke, died Wednesday, February 27.

Mr. Cundiff was ill only a few days, but dread pneumonia proved more than even his rugged body could endure.

Regarding Mr. Cundiff, Commissioner Hecke writes: "There are many reasons why we feel a great loss at Mr. Cundiff's death, not the least of which is the esteem we bore for the man himself. He was a true friend, one who loved his work, and who always stood for what was right in private life and in business. The county horticultural commissioners of the state to whom he was so well known will, with us, feel a deep sorrow because of his passing."

**INCOME TAX**

The Cultivator is glad to know that in some cases it has saved trouble for some of its subscribers in the matter of making return to the Income Tax Collector and we are glad also to note that every one who has gone to the internal revenue collector's office for information has found not only courteous treatment but a desire shown on the part of the collectors to give fullest information and explain the most complicated question. Thousands have reported as to income tax this year who a year ago had no idea they would ever have occasion to make such a report. This is because of a war, which a year ago looked to us would be a most simple matter, for America is so great a nation, and American's appreciation of their own country is so great that we all felt that for America to make to make one big "boo!" would be sufficient. We have now settled down to the conviction that we have taken one great big job. We are not sorry for our bargain. There is no true American who would ask of our nation to turn back. In fact we are glorying in the task before us and in our ability to meet the situation, so we are paying and paying willingly, be it in the form of the direct income tax, or through the purchase of War Savings Stamps or of Liberty Bonds, and we would indeed be unworthy our liberties if we were not, in face of the fact that millions of our brightest and best boys are offering to go "over the top," if we will simply provide the means.

Again as to the Income Tax, just a word. Before the end of this year, the war's demand on this nation has been estimated to reach the enormous sum of \$36,000,000,000, an expression which means not so much to us as 36 cents which is within our physical and mental grasp.

We recently heard Internal Revenue Collector John P. Carter, of the sixth district of California, Los Angeles, in an address to business men touch upon the needs of the war and the amount of money required to conduct the war, give this graphic description of this immense sum of money.

"Counting paper money at 100 thicknesses to the inch, the following figures are applicable: 100 goes into a million, (dollar bills) 10,000 times, or 10,000 inches to the million, through the thickness of the bills, and not through the length or breadth thereof; divide by 12 the number of inches in a foot, gives you 833 feet to the million. A billion is just a thousand times that, or 833 thousand feet, which divided by 5280 feet—the number of feet in a mile, gives you 157 miles to the billion, through the thickness thereof, and not through the length or breadth. Thirty-six times 157 miles is 5652 miles, or a

string of One Dollar bills set on edge and measured through the thickness thereof, reaching from Honolulu, 2100 miles across the Pacific to San Francisco, and then 3250 miles to New York, and 302 miles out to sea."

Now that we have an idea of the problem confronting our government, "render unto Caesar the things that be Caesar's."

**USE POWER**

We have referred often to helping in the present strenuous labor situation by fitting the ranch with tractors, gas engines, or any form of power which will do more work with less man power.

Incidentally may we not refer to the wind mill. It is but little used in California but it has possibilities and with gas going up and with no material advance on wind, as yet, may we not give more consideration to this force of nature?

**This Week's War News**

It has been a week of quiet in northern Italy, at Salonica, Jerusalem and Bagdad.

Boy Scouts the country over have made this a week to secure funds to perfect that organization in its valuable work.

Trade relations have been arranged between America and Spain which brings Spain into much closer relation with the Allies.

Submarine activities have not been so great during the last week. It is known that the submarines have suffered some severe losses.

R. S. Lovett of the Union Pacific has been chosen to decide on betterments needed in American railways to put them on a war footing.

The Japanese forces will probably enter Siberia. Some reports are in circulation that they are already in charge of Vladivostok. Whether this is with approval of Washington is as yet unannounced.

Anarchy is rampant all over Russia. It is rumored that Articles of Peace have been signed by the Bolsheviks and that Russia has agreed to pay an indemnity of \$4,000,000,000, allow Germany to have control of all Baltic provinces, and much other territory to the south. Notwithstanding the peace agreement, the Teutons are still marching toward Petrograd and the Slavs are evacuating as rapidly as possible.

This has been an active week in the drive on American pacifists. The country generally is appealing for more vigorous action. There has been found in a center of New York a wireless plant in full operation, of sufficient power to permit direct communication with Berlin. In Los Angeles, a raid was made on "bible students" who were followers of "Pastor" Russell. Many volumes of "Pastor" Russell's alleged seditious works were confiscated.

The Sammies have been under severe test during the last week. There has been no great battle, but the Teutons have made many attacks with barrage and gasses in the evident effort to harass and break the nerve of American soldiers. So far as reports indicate it has had the reverse effect and the boys in the trenches are begging for a chance, and so far as given to them they have acquitted themselves with honor. It is now known that the American troops are filling the trenches of a sector of considerable length near Verdun.

The Western Berkshire Congress at Davis last week brought practically all Berkshire breeders of the state together.

Farm bureau men of the state will meet at Berkeley, March 11 and plan a great campaign for the coming summer.

Dr. C. L. Roadhouse has been appointed head of the Dairy Industry Division, University of California with headquarters at Davis.

Large plantings of vetch were made in Placer County. Other comparatively new crops which have been planted recently are sudan and sweet sorghum.

The Rice Growers Association has nearly 2,000,000 bags of rice in transit to markets and the indications are that 130,000 acres will be planted this spring.

Harry Stabler of Sutter County, dean of the county horticultural commissioners of California, has retired from office and has been succeeded by Ross Knight.

The supreme court has decided that counties and others losing because of the 1916 fire on the state fair grounds may not recover from the state value of the exhibits lost.

A Porterville orchardist has sued for damages because of trees not true to name.

Tulare County farm bureau recently arranged a farmer's patriotic rally and lecture.

San Joaquin Valley users of "juice" are protesting rates made by electric companies.

Orchardists at Terra Bella, Tulare County are planting largely to olives and muscat grapes.

Grubb, the potato expert, recently delivered a lecture before Santa Cruz and Monterey Counties potato growers.

Oakdale, Stanislaus County, reports its largest crop of grain ever planted as looking exceptionally fine since the recent rains.

Prospective bean planters are urged to place orders for beans for seed early if they want to be sure of getting a supply.

A Monterey County live stock man recently purchased hay at \$35 per ton, which was stolen before he could feed it to his animals.

Tulare dairymen have endorsed the San Joaquin Valley Milk Producers Association also of affiliating with the state association.

An irrigation project which will water a tract of 10,000 acres north of Sharon, Madera County, is being planned by eastern capitalists.

Beekeepers of Monterey County met in Monterey, Saturday, March 2. Experts of the United States department of agriculture were present.

Salida, Stanislaus County, is hoping for a new cannery. Fifteen dollars per ton on tomatoes is promised if acreage sufficient may be secured.

Modesto irrigators are urging their directors to reconsider their action in rejecting the proposition of Turlock in regard to the Don Pedro reservoir dam.

Alfalfa growers of Oakdale, Stanislaus County are planning an efficiency campaign in "changing work" and securing additional help so as to satisfactorily harvest big crop the coming season.

Oranges are selling at a price seldom seen in this country.

More interest is being manifested in peanut production than for many years.

Ventura County is now completing exceptionally fine system of county highways.

A branch of the California Milk Producers' Association, is to be formed in Imperial County.

Dairymen of Imperial Valley have formed the Imperial County Milk Producers Association.

Tomato growers near Escondido, San Diego County are contracting to plant 500 acres for cannery.

Experts of department of agriculture are testing out different types of cotton in Blythe, Imperial County section.

The great wine grape vineyards between San Bernardino and Ontario are to give place to deciduous orchards.

Apricot growers of Ventura County Dried Fruit Association are still receiving returns from last season's shipments.

Chino, San Bernardino County, has the rest of the state smiling because it has "fallen for" the charms of the "rain maker."

Imperial Valley reports most of its last season's barley crop as out of the warehouses, and the stacks of milo materially reduced.

Mike Liebert is president and A. E. Madison, secretary of the farm bureau of Imperial County. The total membership is now 600.

The Victorville section of San Bernardino County will produce large crops of beans. Apple orchards, especially will be interplanted.

The Carpinteria, Santa Barbara County, Walnut Growers' Association met at Carpinteria and listened to the annual report of Secretary Young.

Victorville grain growers are disking for late sown grain instead of plowing. They have found this far more economical and fully as effective.

A new grain elevator is to be built at Bates Station, Oregon.

Great Britain's hog population has decreased over 600,000.

Twin Falls, Idaho, is vaccinating hundreds of head of cattle for black leg.

A stockman of Ephrata, Washington, has a sheep barn capable of housing 10,000.

Farm laborers near Walla Walla, Washington, are receiving \$30 to \$35 a month and board.

Oregon State Poultry Association has resolved to do its utmost in increasing food production.

The Horticultural Union of Yakima, Washington, did a business last year aggregating over \$1,000,000.

Wool stocks on hand in the United States at the beginning of the year aggregated about 562,000,000 pounds.

The Royal Dairy Products Company has been organized at Bellingham, Washington, with a capitalization of \$100,000. A milk condensary will be built at once.

The consumption of sugar during 1917 was 88.3 pounds per capita, whereas the average annual consumption for the preceding five years was 84.7 pounds.

Farm machinery week was observed in nearly every state. Farmers did repairing and ordered new parts for mowers, reapers and all implements which may be used months later.

The United States fuel administration is considering the advisability of "skip-stop" schedules for all electric railways so that there shall be not more than eight stops per mile. This will save fuel as it takes three times as much power to stop and start an electric car as to run it for one block.

Employers of labor in the East are uniting in suggesting that they will appoint representatives of their organizations providing the representatives of the labor unions will do the same, that all differences between labor and capital may be settled while labor is being continued to its fullest —this as a war measure.

We Manufacture Levelers for Any Power From 6 Horses to a 75 H. P. Tractor

A Schmeiser Leveler  
of the "Giant" Type  
WILL WORK WONDERS ON YOUR FARM

Moving immense amounts of dirt daily, and working on ground too tough for horses and Fresno's to tackle, SCHMEISER POWER LAND LEVELERS are now being used with utmost success by a great many ranchers, large and small—also by contractors—saving their owners time, labor and money.

WE SEND THEM ON THREE DAYS' TRIAL

So extremely simple, a child could operate one, as a simple twist of the wrist raises and lowers the bucket or holds it stationary, as the case may require.

Send today for full information and our latest catalog of earth-moving machines.

Schmeiser Manufacturing Company  
22 Mechanic St. Davis, Cal.

Manufacturers of  
Sure Pop Almond Hullers and Separators, 3 sizes; McGarvin Fruit and Olive Graders, any size; Schandoney & Harrington Equalizing Hitches, any size; Diamond Special Harrows, Baker Clips, Clevises, and Schmeiser Portable Automatic Hay Derrick. We sell the Martin Ditcher and Grader.

Gould's Centrifugal PUMPS Crocker-Wheeler MOTORS

Will help You to raise larger and more profitable crops

Insure against drought. Give your land sufficient water independent of the rains. Let Goulds and Crocker Wheeler Units do your pumping economically.

Don't delay—Submit us your pumping problems. Write or call now for information.

DEALERS:—Write for Unoccupied Territory.

The Pump and Engine House of the Pacific Coast

Canada made me Prosperous

—that's what thousands of farmers say, who have gone from the U. S. to settle on homesteads or buy land in Western Canada. Canada's invitation to every industrious worker to settle in Manitoba, Saskatchewan or Alberta is especially attractive. She wants farmers to make money and happy, prosperous homes for themselves by helping her raise immense wheat crops to feed the world.

You Can Get a Homestead of 160 Acres FREE

or other lands at very low prices. Where you can buy good farm land at \$15. to \$30. per acre that will raise 20 to 45 bushels of \$2. wheat to the acre—it's easy to become prosperous. Canadian farmers also grow wonderful crops of Oats, Barley and Flax. Mixed Farming is fully as profitable an industry as grain raising. The excellent grasses, full of nutrition, are the only food required either for beef or dairy purposes. Good schools and churches, markets convenient, climate excellent. Write for literature and particulars as to reduced railway rates to Supt. Immigration, Ottawa, Can., or to

## Weigh your Culverts

Get What  
You Pay For

**B**E SURE that your culverts are full weight—full gauge. Weigh them. Check them up with the diameter and weight cards which your nearest "Armco" Iron Culvert Manufacturer will gladly furnish. This card tells what each size of corrugated pipe should weigh per foot—standard weight. You are only doing yourself justice in seeing that every pipe you buy conforms to these standards.

## "ARMCO" IRON CORRUGATED CULVERTS

will be found to be always *full weight* and *full gauge*, or a little heavier, not merely on the end sections but all the way through. The standards they must meet are as definite and as rigid as those governing the quality of their material. "Armco" Iron Culverts are the 100% Culverts in weight, diameter, quality, strength and longevity. They are not affected by frosts or spring freshets. Stand up under heavy loads. Can be installed quickly and by unskilled labor.

Armco Iron Culvert & Flume Manufacturers' Association  
CINCINNATI, OHIO

## Ornamental and Fruit Trees

We have for sale this season a magnificent stock of Fruit and Ornamental Trees, Climbing Plants, Shrubs, Palms and Roses.

Write for prices on Cherry, Walnut, Citrus and Olive Trees, and Resistant Grape Vines.

Send for Illustrated Catalog and Price List.

California Nursery Co.  
Niles, California.

## Cauliflower and Broccoli Production on the Pacific Coast

By R. G. Risser, Assistant Crop Specialist, United States Bureau of Crop Estimates

**C**AULIFLOWER is so exacting in its requirements that its commercial production is limited to few localities in the United States, and when the last census was made in 1910 California was shown to be second only to New York in acreage. The census figures showed New York to have 1720 acres; California, 790 acres; and Illinois, which ranked third, 127 acres. Since then there has been a remarkable extension of the California area of cauliflower, and the crop has come to be one of the principal vegetables grown on the Pacific Coast for Eastern shipment. It has been produced in a limited way in several different districts, but the section south of Los Angeles has been the big cauliflower area of the state, and the section immediately south of San Francisco has been the main producer of broccoli.

was apparent as early as October and has increased greatly since then. The drouth has affected the quality, color, solidity, and size of heads. It has increased the percentage of culls and reduced the yield per acre. It has accentuated damage from aphids and brought alkali to the surface from the use of large quantities of irrigation water. It also delayed the maturity of the crop. In spite of the big acreage, shipments in November of 1917 were only 20 per cent as heavy as those of November, 1916 and shipments in December, 1917 were only 60 per cent as heavy as those of December, 1916, while shipments in January, 1918 exceeded those of January, 1917. Estimates of tonnage have been reduced repeatedly. On account of extensive late plantings it was at first expected that the late shipments from the Compton district south of Los Angeles would be heavy, but serious damage

Vigorous Growth of Cauliflower

The lush growth in this cauliflower is shown by comparing to height of Mr. Yingling who is standing in the field. Mr. Yingling has 32 acres, practically every one showing as fine growth as indicated in this photo. His place is near Compton, Los Angeles County.

Broccoli has also attracted considerable attention in the Umqua Valley of Oregon and is grown in a small way near Sacramento and Stockton. Imperial Valley is trying cauliflower more extensively than in past years and Alameda County is taking up broccoli production also.

The estimated acreage of cauliflower and broccoli is as follows:

	1916-7	1917-8
Los Angeles County	3200	4800
Orange County	40	100
Imperial County	15	165
San Mateo County	1100	1600
Alameda County	90	300
Scattering California Counties	130	150
Total for California	4575	7115
State of Oregon	400	200
	4975	7315

### Shipping Season

The shipping season of each of the three principal shipping districts is shown by the following table which indicates the percentage of the total crop moved each month during the last season:

Southern California, 1916: November, 12; December, 20; January, 36; February, 15; 1917: March, 4; April, 1.5; May, 2; June, 1.

Central California, 1916: November, 1; December, 3; January, 5; February, 36; 1917: March, 47; April, 6; May, 0.5.

Oregon, 1917: March, 1; April, 99. Oregon last year was about one month late. In general the shipping season varies considerably depending upon rainfall and temperature.

### Growing Season

The growing season for cauliflower and broccoli on the Pacific Coast for the year 1917-18 has been decidedly unfavorable. Rains which are so desirable for the sensitive plants have not materialized in adequate quantity. The normal seasonal rainfall for Los Angeles to February 1 is 8.05 inches. This season it has been .93 inches or 7.12 inches short of normal. The effect of the shortage of rainfall

to the growing plants by a general infestation of aphids has reduced the prospects for heavy late shipments.

In the central portion of the state the effect of the abnormally dry season was also serious. The crop grown without irrigation was reduced to about 60 per cent of normal.

In Oregon the broccoli crop was cut short by hot dry weather at the time of transplanting in June and July and additional dry weather during the fall months. The winter has been mild, however, and the winter damage from freezing which occurred in 1916 and 1917 has not been done this year hence plants are now reported to be in good growing condition.

### The Present Situation

A half an inch of rain in January made a temporary improvement in the quality of the Los Angeles and Compton product and further benefit from a shower the first week of February resulted. The rains and light frosts have aided in the control of the aphids and with spraying and parasitic enemies the insects are now well checked. A few growers who have favorable soil and have supplied ample water for irrigation are getting some good shipping stock, but on the whole the quality is variable and the average is below normal.

The peak load of the southern district was reached with approximately 150 cars shipped out the last week of January, and a decline in shipments has followed. Chinese growers who control the bulk of the early crop are nearly through shipping and American growers are well started. Many fields show discolored leaves, and a portion of the late acreage has been abandoned.

Central California broccoli has not been affected by excessive rains as it frequently is and the mild weather with fogs has been favorable. Shipments are expected to be heavy from now on. In general, the quality is not equal to the Los Angeles product. The absence of sufficient rains has stunted

# REO

"THE GOLD STANDARD  
OF VALUES"

## A Seven Passenger Six That You Can Afford

### THE GOLD STANDARD OF VALUES

#### Salient Features of the Reo Six

50 HORSE POWER, Six-cylinder motor cast in threes.

REO DESIGNED, Reo made—throughout.

126 INCH Wheel Base.

CANTILEVER rear springs—Semi-elliptic front springs.

FULL FLOATING rear axle.

TIMKEN BEARINGS throughout.

NOISELESS spiral-bevel driving gears.

REO ONE-ROD centre control.

HYATT QUIET bearings in transmission—at all points.

MULTIPLE Dry-disc clutch.

BOTH BRAKES operated by foot levers and provided with ratchet locks. Extra large and both operating on rear hubs. No hand brake.

CLUTCH AND SERVICE brake are interconnected.

TWO UNIVERSAL Joints in drive shaft.

TORQUE SHAFT relieves driving mechanism of road stresses.

SUB FRAME carries motor and transmission.

EXTRA LARGE—and round—spokes in wheels.

OVER-SIZE TIRES—34 in. x 4½ in.

PERFECT LUBRICATION at every moving point.

REO RADIATOR—Reo designed, Reo made.

REO-REMY Electric Starting, Lighting and Ignition system.

REO STEERING GEAR—exclusively Reo. No back-lash—self-adjusting for wear. Positive.

50 PER CENT OVERSIZE in all vital parts—crank-shaft, axles, driving shafts, gears, frame, wheels, tires.

NET RESULT—Reo upkeep equalled by no other 7-passenger car.

WE ARE NOT THINKING of the price—for that isn't the primary consideration in the selection of a car.

YOU KNOW YOUR OWN NEEDS—whether a five passenger car is sufficient, or if you really need, at times, room for more.

AND YOU KNOW better than anyone else can tell you, what your price limit is.

AND SURELY AT ITS PRICE this Reo Six is the greatest value obtainable in a car of established reputation.

AND REO REPUTATION is second to none.

WHEN WE SAY "Here is a seven-passenger Six that you can afford," we are thinking of the same item that you, an experienced motorist, are considering—

NAMELY—UPKEEP. That is the first thing to consider in the selection of an automobile.

CERTAINLY YOU CAN afford to own a seven-passenger car—and you can treat yourself to the luxury of a sweet-running, silent Six—if you can feel that not only in first cost but also in cost of upkeep it will be well within your means and accord with your ideas.

ASK ANY REO SIX OWNER to tell you of the upkeep cost of his Six—and the longer he has owned and the farther he has driven his Reo, the better will his answer sound.

HE WILL TELL YOU that, having compared notes with friends who own and drive other makes of cars—fours as well as sixes—of the same passenger capacity, he has never found one that compared with his Reo Six in low cost of upkeep.

AND HE'LL TELL YOU, too, that he has yet to find even a five-passenger car—four or six—the operation, repairs, replacements and general upkeep cost of which proved as low as his Reo Six—except one the five-passenger Reo.

NATURALLY a five passenger car ought to be cheaper to maintain than one of seven-passenger capacity—but most are not, when you look up the figures.

REO DEALERS TELL US that their records for the past three years show that Reo Six owners on the average have paid less than eight dollars per car per year for replacement parts.

JUST READ THAT AGAIN—with thousands of Reo Sixes running in all parts of the country, over all kinds of roads and handled by all kinds of skilled and unskilled drivers; most of them owner driven and owner cared for (or neglected)—

THE AVERAGE COST per car, per year, for replacement parts was less than eight dollars!

FRANKLY WE DON'T believe that record can be equalled by any other seven-passenger car on earth.

AND WE MAY ADD that the records on the five-passenger Reo show less than seven dollars per car.

THE SAME QUALITY—the same sound engineering; the same ripe experience; the same attention to little details and the same construction, inspection and testing of every car enter into the making of all Reo models.

COST OF UPKEEP is always uppermost in the minds of Reo engineers, when designing and when specifying materials. And since the same desire is uppermost in the minds of the most experienced buyers—we meet on a common ground.

WE ARE FRANK TO ADMIT that to a large extent the phenomenally low cost of upkeep of Reos is due to the fact that Reo buyers are, as a class, better informed and more careful in their selection than the average.

REOS DO NOT APPEAL to those who look only to superficials—Reos are built for connoisseurs and Reo owners are mostly men of ripe experience in motoring. They, therefore, combine prudence with intelligence in their choosing of an automobile.

IF YOU ARE ONE of that kind, we say to you, here is a magnificent, luxurious, seven-passenger six that, both in first cost and cost of upkeep, you can well afford to own.

REO EFFICIENCY sets the price lower—Reo quality guarantees low upkeep.

Reo Motor Car Company, Lansing, Mich.

When writing advertisers, mention The Cultivator.

## Who's Who

With the issue of August 11 the Cultivator started its series of "Who's Who" articles to bring before its readers some of the livestock producers of California who are responsible for the large development of the industry. Where did they come from and how long have they been engaged in California development, also how do they look, so pencil and camera are to be used, and some homely, everyday photographs and notes regarding them will bring us closer together. Bear in mind we say "homely photographs" and not photographs of homely people. The idea we wish to convey is that so far as possible we will secure photographs in everyday surroundings at the homes of the livestock producers.

Written for California Cultivator By C. A. Briggs

### WM. BERNSTEIN

WILL BERNSTEIN was born on a farm in Morrow, Ohio, April 9, 1873. His early years were all spent in the Middle West where he obtained his schooling, graduating from the Holbrook Normal School at Lebanon, Ohio. Mr. Bernstein taught in

Wm. Bernstein

that state for three years but finally decided that California held out great inducements for a young man. He came to Hanford, Kings County in May, 1897, where he engaged in his present business of confectioner and baker.

Among Poland-China swine breeders Mr. Bernstein has high rank. He started as a breeder about eight years ago and has had marked success both in breeding and in the show ring. That he came naturally by his ability in this line is shown by the fact that his father, George Bernstein, was a pioneer swine breeder and one of the first, if not the first breeder, of Poland-Chinas in Ohio. Many of the earliest swine breeders of that state got their first start with some of the Bernstein Poland-Chinas. His son "Will" early learned to appreciate the profit producing points of his favorite hog and has never seen any reason to change his mind. "He is strong in the faith."

Happiness and honor have been a portion of his lot in life, the first when he married Mary P. Trehwitt of Hanford on May 28, 1902, the others scattered along pretty much all the way in offices and responsibilities, all of which he has filled and carried well. He now holds the position of president of the California Poland-China Breeders' Association and is also president of the Kings County chamber of commerce. He is a Mason and a Shriner, and, best of all, a splendid friend to his friends, who are numberless. He is a hard fighter and worker to further the interests of his chosen breed, and has done much and will do more to advance the interests of California live stock.

### CATTLE DISEASE

The University of Minnesota through its veterinary division reports a new cattle disease which it is feared may prove serious. It is called Johne's disease.

The disease is scientifically known as chronic pseudo-tuberculosis enteritis, and is caused by a multiplication in the intestinal mucous membrane and mesenteric glands of a specific micro-organism known as Johne's

bacillus, which produces a diffuse thickening of the bowel and an interference with food absorption, leading to diarrhea and wasting.

Veterinarians say there is no known remedy and urge immediate reports of indications of its appearance.

## CUTTER'S Blackleg Filtrate and Blackleg Tissue Aggressin

*The New, Safe  
and Efficient Agents  
for Protecting Calves  
from Blackleg.*

Cutter's Blackleg Filtrate positively protects against Blackleg.

Cutter's Blackleg Aggressin, made directly from animal tissues, affords even greater protection.

Neither the Filtrate nor the Aggressin can possibly produce Blackleg in even the most susceptible animals.

These products will probably never supplant Blackleg Vaccine. Still, under some conditions, they have advantages that should be known to every stockraiser.

Write us for full information regarding them.

THE CUTTER LABORATORY,  
Berkeley, California.

"The Laboratory that knows how"

**Sound Legs  
Pull Big Loads**

No horse with a Spavin, Splint, Curb, Ringbone, Bony Growth or Sprain, can do himself justice. Often these ailments put a horse out of commission. Thousands of farmers and horsemen have been keeping their horses sound by using Kendall's Spavin Treatment—the old reliable, safe remedy. We have many letters like these to prove it. Wm. Lucciarone, Hubbard, Ohio, writes: "I have a horse that had a sore leg for about two weeks and could not get cured. One day one of my neighbors told me that Kendall's Spavin Treatment would be a good remedy. So I got a bottle and it saved me a horse. I will never be without Kendall's Spavin Treatment in my stable."

## KENDALL'S SPAVIN TREATMENT

Known for 40 Years as Kendall's Spavin Cure keeps the horses working—making money in the field instead of "teating their heads off." It acts quickly, leaves no scars or blemishes and costs little. Don't risk experiments with unknown, untried brands when Kendall's costs no more (often less.)

Be ready for any emergency. Keep a bottle of Kendall's in the barn. Then if anything should lame your horse you can apply it quickly and save big money as others have done and are doing. Tear this advertisement out to remind you to get Kendall's Spavin Treatment next time you go to town.

Price \$1.10 per bottle—6 bottles \$5.50. Ask druggist for free book "Treatise on the Horse" or write direct to us.

Dr. B. J. Kendall Company  
Enosburg Falls, Vt., U. S. A.

HOW TO MAKE GOOD BUTTER

The butter made on the farms of the United States may be materially improved in quality in most cases, if standard methods are employed and greater care is exercised in carrying out the necessary details, says the United States department of agriculture. The department gives the following outline of the essential steps to be taken in making good farm butter:

Produce clean milk and cream. Cool the cream immediately after it comes from the separator. Clean and sterilize all utensils.

Ripen or sour the cream at from 65 degrees to 75 degrees Fahrenheit until mildly sour. Always use a thermometer in order to know that the right temperature is reached.

Cool the cream to churning temperature or below, and hold at that temperature for at least two hours before churning.

Use a churning temperature — usually between 52 degrees and 66 degrees Fahrenheit—that will require 30 or 40 minutes to obtain butter.

Clean and scald the churn, then half fill it with cold water and revolve until churn is thoroughly cooled, after which empty the water.

Pour the cream into the churn through a strainer.

Add butter color — from 20 to 35 drops to a gallon of cream—except late in the spring and early in the summer.

Put the cover on tight; revolve the churn several times; stop with bottom up and remove stopper to permit escape of gas; repeat until no more gas forms.

Continue churning until butter granules are formed the size of grains of wheat.

Draw off the buttermilk through the hole at the bottom of the churn, using a strainer to catch particles of butter. When the buttermilk has drained out, replace the cork.

Prepare twice as much wash water as there is buttermilk, and at about the same temperature. Use the thermometer; do not guess at temperatures. Put one-half the water into the churn with the butter.

Replace the cover and revolve the churn rapidly a few times, then draw off the water. Repeat the washing with the remainder of the water.

The butter should still be in granular form when the washing is completed.

Weigh the butter.

Place the butter on the worker and add salt at the rate of three-quarters of an ounce to a pound of butter.

Work the butter until the salt is dissolved and evenly distributed. Do not overwork.

Pack in any convenient form for home use, or make into one-pound prints for market, wrapping the butter in white parchment paper and inclosing in a paraffined carton.

Clean the churn and all buttermaking utensils.

MOONEY IN HOGS

A Tulare County correspondent writes:

"Here's a hog story from Tulare County that shows there is good money in raising porkers even when pen fattened and at the present high cost of feedstuffs. Elmer Michaeli who lives in the alfalfa district west of Porterville bought a porker on which he nearly doubled his money in two months' time, and this is the story of how he did it:

"The hog weighed 102 pounds when Michaeli bought it, paying 11 cents a pound, or the sum of \$11.22. At the end of two months it had gained 128 pounds, weighing 230 pounds, which at the present price of hogs (14 cents) was worth \$32.20, making a gain of \$20.98. In the two months' time he had fed the hog 275 pounds of corn, which at three cents per pound amounted to \$8.25. Deducting the price of the corn from the value of the hog, there remains a net gain of \$12.73."

If we could all buy hogs at 11 cents and sell at present prices, or prices which have obtained for several months, and buy corn at three cents we could all get rich. Corn in Los Angeles has scarcely been below four and a half cents, and in San Francisco, in carlots, not below three and a half for many a moon. Let's grow hogs but figger right.

The "California Special" Plants Every Variety of Beans

Make sure of a good stand of beans on your valuable bean land, by using the thoroughly dependable "California Special" Bean Planter.

Each planter is equipped with a set of rotary droppers adjustable to plant any variety of beans from small white to large limas. This is the best and most dependable dropping device known for planting beans. The dropper rotates without friction through the hopper cupping the seed as delicately as though each were selected by hand. The seed passes from dropper to boot which runs at any depth set. Shoe runners will be

furnished where desired. Each boot is hinged with wooden peg. Open wheels run back of boot. These press inward and downward around the seed but do not pack the ground directly on top. The California Special is the last word in bean planting machinery. The frame is especially strong—is made low for orchard work if desired and is so evenly balanced and adjusted as to make it easy to handle. Made in 2, 4, 6 and 8 row sizes.

Rotary dropping device insures uniform planting. It cannot injure any of the seed.

Catalogue and circulars sent on request. We make a complete line of bean and beet tools.

WATER FOR STOCK

WATER FOR THE BATH

WATER FOR KITCHEN

WATER WHERE YOU NEED IT

When Pa was a boy things were different

He drove the cows to water at the creek in the "lower eighty"

On Saturday night his Ma heated teakettle and boiler full of water which had been carried from the spring

The family bathed in the wash-tub—in the kitchen

All the water used for dish washing and cooking was pumped and carried to the house

Pa's and Ma's life was mostly drudgery and carrying water helped make it so

How different is this side of the picture

We have a big redwood tank on a tower with a redwood pipe leading to the stock tank in the pasture

Another redwood pipe line leads to the house where turning a faucet is the only effort needed to produce abundant water

Our redwood tank and pipe line will last a life-time and earn more dividends on the small investment than anything we have on the farm

Pa says he wishes his Ma had had an outfit like ours

THE JERSEY

"Her product is of the very highest quality, obtained on the most economic basis, and commands the best prices in the market. The grain of her rich, golden butter is natural, and not broken down by artificial coloring matter."

## Field Notes from the Live Stock Men

Butte City Ranch reports particularly good business during the past two or three months. Berkshires have been sold to W. B. Carpenter, Red Bluff; Chas. Parker, Butte City; Ernest Eibe, Glenn; J. B. Stormer, Willows; O. L. Raper, Glenn; R. J. Bender, Glenn; W. M. Laurence, Colusa; Chas. Beretta, Willows; E. C. Gates, Butte City, and many others. Among the Shorthorn buyers are L. E. Tuttle, Willows; Chas. Beretta, Willows; Jas. Snell, Orland. Pony business has been very brisk.

Arizona University Men to become cattlemen—George W. Barnes, formerly live stock specialist of the University of Arizona, has resigned his position to engage in the cattle business in Navajo County. With him will be associated L. L. Bates, now superintendent of the dry farm experiment station of the University at Prescott. Their practical knowledge of beef cattle production in Arizona will especially fit them for their new enterprise.

Two Queens have passed. One the great pure bred Holstein, Dutchess Skylark Ormsby, but eight years old, with world record of 27,761.7 pounds milk in 365 days and 1506 pounds butter (16 per cent overrun) in 365 days; the other, a Guernsey, Clare of Poplar Grove 3rd 16343, with record of 13,170.7 pounds milk and 568.81 pounds butterfat, carrying calf 296 days.

Another high priced youngster has changed hands. The Holstein, Rag Apple Korndyke 8th, Syracuse, New York, sold for \$35,000. He is a half-brother of the \$53,000 bull, King Ormsby Jane Rag Apple, sold last June.

Prince Gelsche Walker is outdoing himself as a sire of heifers this season. Eighteen cows dropped heifer calves from him at Santa Anita Rancho, then two cows in the Morris herd dropped heifers. The twenty-first cow to calve from his service dropped a bull calf at Santa Anita Rancho.

James J. Jeffries, Burbank, is steadily shaping his farming operations toward the development of the excellent herd of registered Holsteins which he founded a couple of years ago. Additional acreage of alfalfa is being planted and provision made for other forage crops, including corn to fill the two big silos. The herd is in charge of E. J. Cameron, a capable young man well known in California livestock circles. Official testing will probably begin in the herd this fall. An outstanding feature of this herd is the exceptional quality of the calves being got by the herd sire, King Segis Pontiac Janek. Their uniformly deep bodies, straight backs and square rumps give them a rating much above the average in future promise.

Rosamaines Rancho, owned by Stalder Bros., Riverside, has a number of their best registered Holstein females approaching freshening time. The great 34 pound cow, Gerben Abbecker Maid, and the 31 pound three year old, Stanislaus Princess Cleopatra, both freshen in April, and at present are both in fit condition.

Alex Whaley, Tulare, has a very promising lot of heifers and cows to go on official test shortly. He also has coming on a very pleasing group of heifers from his former herd sire, Segis Pontiac De Kol Burke Luit, who is by Segis Pontiac De Kol Burke and out of the 32.76 pound four year old Luit Burke.

Tilly Alcartra has now probably reached her best 30 day production, and for that period has 3134.1 pounds milk and 157.30 pounds butter to her credit. She is in splendid condition and at the present time, more than 60 days after calving is milking about 100 pounds per day and averaging over 35 pounds butter per week. The state record senior three year old, Aralia De Kol Pontiac Mead, has again increased her seven day butter record to 34.44 pounds with 511.8 pounds milk, and for 30 days has 2195.4 pounds milk and 138.43 pounds butter. Hartog Creamelle De Kol, who recently completed a yearly record of 1093.03 pounds butter, has freshened again and made 566.6 pounds milk and 29.60 pounds butter in seven days. Margaret Aralia De Kol becomes the California record holder for butter in seven

en days eight months after calving, as she now has 25.86 pounds to her credit. All of these record makers are owned by A. W. Morris & Sons.

King Korndyke Pontiac 20th, the great young bull for which W. J. Higdon, Tulare, paid \$6500 in the Guaranty Sale last December, is at present in the herd of A. D. Morris & Sons Corporation, where he is being bred to a considerable number of the best cows in the herd. Quite a number of high record cows from other herds have been booked to his service, as Mr. Higdon has decided to allow owners of approved cows to avail themselves of the service of this remarkably bred young sire.

Tagus Ranch, Tulare, started off the official test season with their registered Holsteins on February 18 and have several promising candidates for good records.

McAlister & Son, Chino, have on hand a heifer herd from calves up to two year olds that measure fully up to the reputation this breeding establishment has for good heifers. The very successful methods by which the McAlisters raise and develop their heifers seems to contribute in no small way to the great records their stock has made at freshening time both in their own hands and in the hands of other breeders who have bought from them. The first calves from the herd bull "It" are just coming on in the herd at present and they are of pleasing size and vigor and well marked. The McAlisters have the honor of making the first 30 pound record on a cow purchased in the Guaranty Sale held at Sacramento in December, and they made not one but two. Miss Pontiac Nudine of Springvale, the 30 pound cow purchased from Bridgford Company, increased her record to 31 pounds butter in seven days, and Ontario Blonde Pietje, bought from Fred W. Kiesel, made 30.06 pounds butter in seven days as a junior four year old.

Santa Anita Rancho, owned by Anita Baldwin, Santa Anita, promises to be a source of official record news when the next test season opens for the registered Holsteins on the place, which will probably commence when some of the heifers begin to freshen. There is a wealth of good blood in the herd, including 18 daughters of Prince Gelsche Walker, many out of high record dams. Also a group of heifers by the senior herd sire, Mercl Lad Korndyke Burke, son of De Kol Hengerfeld Burke and Winnie Korndyke Cornucopia De Kol, 31,034.2 pounds milk and 1201.06 pounds butter in one year. The junior herd sire at Santa Anita is a son of Prince Gelsche Walker out of Alba Sadie Cornucopia Creeta, 34.14 pounds butter in seven days, 17,637.5 pounds milk and 809.46 pounds butter in 305 days, he being the highest record son of Prince Gelsche Walker yet in service.

Imp. Brittleware Mistletoe, the great senior four year old registered Guernsey heifer owned by Hollow Hill Farm, Redlands, did not stop her great production when she had completed her year's official record of 14,467.2 pounds milk and 751.38 pounds butter fat, and at the end of 15 months she had to her credit for that period 19,256.8 pounds milk and 922.96 pounds butter fat, and at that time was within 33 days of calving. She looks like a dairy worker and it is likely that she will be heard from again with a greater record.

Prince Alcartra Korndyke must be reckoned with when we consider the leading Holstein sires of California from now on, for his first daughters to complete yearly test are placing him high among the young sires of yearly record daughters. But their records are only what might be expected of the daughters of a son of Korndyke Queen De Kol's Prince and Tilly Alcartra. The J. S. Gibson Company, Williams, who own Prince Alcartra Korndyke, have a good lot of his daughters yet to freshen for the first time and he is being bred to a good lot of cows and heifers.

Clayton N. Slocum of H. P. Slocum & Sons of Willows, arrived February 28 from Nebraska, Illinois and Missouri with 30 registered Duroc-Jerseys

## MORE WORK FROM YOUR HORSES

The use of collar pads is humane. Again, your horses will do more work if properly protected by the right kind of pad. TAPATCO is the right kind.

### A NEW AND BETTER HOOK ATTACHMENT

Consisting of wire staple, reinforced with felt washer (note where arrows point). This gives the hooks a better hold and prevents pulling off. The weakest point is made strong and life of pad greatly lengthened.

Found Only on Pads Made by Us.

DUROC JERSEYS

Sows, girls and a few boars of the best breeding FOR SALE

L. P. Slocum & Son

R 1 Willows, Cal.

valued at \$5000. These are for the Slocum herd and for other Glenn and Butte County breeders. They have been pronounced by competent authorities to be the best lot of Duroc-Jerseys that ever came to the coast. Included in the shipment is the famous sow, Model Lena for which he paid \$1000 at public auction. She is a wonderful sow individually and has been one of the greatest producers the breed has ever had. Every hog in the lot is a good one and they are a great addition to the live stock population of California.

MAKE PORK WITH FOOD WASTES

Even though the hog furnishes the most meat for a given amount of feed and will produce it in the quickest time, the department of agriculture points out that this meat should be produced mainly from food wastes and not from good grain that would furnish food directly to man. The great economy in pork production comes from the fact that pigs furnish a food by-product from these wastes and do not need the high-grade feeds that beef cattle must have.

Wastes on farms and in the towns make good hog feed; by-products from canneries, bakeries, fisheries, packing plants and the like can be utilized as hog feed and to better economic advantage than in any other way. Dairy wastes are particularly valuable as hog feed and promote rapid growth with a good money return for every gallon fed.

The farm orchard furnishes large quantities of wind-fallen or defective fruit, which is relished by hogs, and is beneficial if fed in small quantities frequently, and not all at one feed. Garden wastes, tops of vegetables, culls of all sorts, even weeds, are readily eaten, and such as may not be eaten will be worked over, going into the bedding and adding to the manure.

Kitchen wastes are an excellent source of food for hogs, but should be kept at a minimum, because practically all food prepared for man's use should be eaten by him.

GUERNSEYS INCREASING

The census report of Guernseys shows California's increase in this favorite breed to be very great. To be exact, the increase in Guernseys in this state from 1911 to 1917 was 310 per cent. In 1911 there were but three members of the American Guernsey Cattle Club in California. There are now 13. There were then in the state 201 registered animals; now 825. But the remarkable feature in the report is that of this comparatively small number of registered animals there are 130 animals with A. R. records completed.

The percentage of pure bred Guernseys in various sections in 1911 and 1917 may be seen from the following table:

	1911	1917
N. E. Section .....	17	15
North Atlantic Section .....	37	30
Southeast Section .....	3	2
Southwestern Section .....	1	1
Middle Section .....	40	48
Western Section .....	2	4
	100	100

NATIONAL SWINE GROWERS' ASSOCIATION

Secretary Russell of the National Swine Growers Association writes regarding this comparatively new association, organized four years ago, and the National Swine Show which it has pulled off. He refers to the campaign for greater pork production and says:

"It is the opinion of the association that there are many more ways by which the importance and value of swine growing can be brought to the American people as well as those of other countries if we but had a man acquainted with swine growing and swine men who could give his whole time to this business of the association."

Means of financing the movement and placing the permanent executive official in charge will soon be provided, and it is hoped that a contract may be made with some representative city which will afford a place of holding the next three annual shows.

Cattle fodder is being manufactured in Holland from fish meal, potato peelings, wastes from slaughter houses, etc.

PERFECTION MILKER

What Women Can Do In War Time

IN Europe the women are taking the places of men in many activities. While the war lasts many of our women folk may have to assume extra burdens. On many dairy farms today, women are milking from 15 to 30 cows with the Perfection.

The Perfection draws the milk in Nature's Way, with a gentle suction, a spiral downward squeeze followed by a period of complete release. It's gentle, uniform action is agreeable to the cow. The Perfection is simple, having no complicated parts. It's easy for a girl to handle.

Miss Rosa M. Sweatt of Dixfield, Maine, writes:

"I have used a Perfection Milking Machine on W. S. Marble's farm since last April. It works to perfection and really makes milking a pleasure and it is so much better for the cows that they plainly show they like it. It is especially good on hard milkers, or if there is any soreness on the teat or udder there is no kicking or trouble in any way.

Jay Johnson of Faribault, Minn., writes: "I have used your Perfection Milking Machine since April 1916 and milk 35 cows. I have saved one hour each milking and in the harvest time my wife did the milking, saving me an extra man. I can heartily recommend the Perfection.

I looked around and saw several others work and I feel satisfied I got the best."

Your wife or daughter may not have to help you with the milking, but if you install a Perfection Milker in your barn, either one of them could do the milking alone in an emergency. Let us send you our illustrated catalog.

## MOLINE UNIVERSAL TRACTOR

*"It Solves the Farm Help Problem"*

YOU can make more money with the Moline-Universal than with any other tractor because it can be kept at work more days a year—no matter how large or small your farm or what crops you grow. The Moline-Universal is built to fit the farm and every operation on the farm. You can find work for it every day in the year.

If for no other reason than the fact that the Moline-Universal can be kept busier on any farm than any other tractor it is your "best buy."

But the greatest advantage of the Moline-Universal is that one man controls both tractor and implement in all operations. You control the entire outfit from the seat of the implement, where you must sit in order to do good work.

The wonderful versatility and one-man control of the Moline-Universal are due to its two-wheel construction. It attaches direct to the implement and forms one compact unit. All weight is placed on the two big drive wheels—all of it goes into the pull. There is no dead weight to carry around. That's why the Moline-Universal, weighing only 2850 pounds, can pull as much as tractors weighing from 1500 to 2000 pounds more; does not pack the soil; requires the least amount of fuel for operation; turns in a 16-ft. circle and backs as readily as it goes forward.

The Moline-Universal Tractor is the crowning achievement in a half century of manufacturing experience and is built by a company of unquestioned integrity and a world wide reputation as makers of quality farm implements.

Why not let the Moline-Universal help you this spring? Write for free illustrated booklet and name of your nearest Moline dealer.

Address Dept. 49

## BAG BALM

MADE BY THE ROW-KURE PEOPLE

### A Healthy Udder

means comfort for the cow and a generous, easy milk flow. Bag Balm, the great healing ointment, will keep the udder free from sores, chaps, cuts, bruises, cracks, bunches and inflammation. Bag Balm is especially effective at the calving period when caked bag frequently occurs. Its penetrating and softening effect is immediate. Every dairy should keep Bag Balm on hand. Sold by druggists and feed dealers, in big 50c packages. Write for free booklet, "Dairy Wrinkles." DAIRY ASSOCIATION CO., Lyndonville, Vt.

## Legal Queries

Louis B. Stanton, attorney, 243 Wilcox Building, Los Angeles, will answer legal queries in this department.

Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When replies are wished in Cultivator address query to 115½ N. Broadway, Los Angeles.

### Form of Will

Further in respect to your inquiries as to form of will. One of the best and simplest wills that answers all the ordinary requirements of the average man and permits of the simplest administration of the estate at the least expense is that the form for which is hereafter given. It is entirely written, signed, and dated in the handwriting of the party making the will and needs no witnesses nor declaration of the making of the will, but may be filed among the papers of the testator. Care should be taken, however, to allow it to be known that a will has been made and the place where it has been deposited so that it may be found and produced after death.

Los Angeles, California,

March 2nd, 1918.

I, John Doe, hereby make my last will. I give all property of which I die possessed to my wife, Jane Doe. I appoint my said wife the executrix of this will to act without bonds either upon qualifying or upon sale of any of the estate. I appoint my said wife, Jane Doe, the guardian of my minor children, Peter Doe and James Doe, to act without bond. I make no bequest or devise to my said children, Peter Doe and James Doe, as I well know that their mother will well care for their interests. I give my said executrix power to sell all or any of my estate, real or personal, without prior order to court, and I revoke all wills by me heretofore made. I declare that this will is entirely written, signed, and dated in my own handwriting.

JOHN DOE.

### Oil or Minerals on Patented Land

Does the owner of a patented homestead have the same right to oil discovered on his land that he would if he had bought the land?—Subscriber, Lancaster.

He has the same right as he would have had if he had bought the land; if there is a reservation of minerals in the land it goes with the original title from the government.

### Passing Deed After Death of Grantor

Is a deed which contains a clause that it is to be recorded only upon the death of the grantor and which is, in fact, not recorded until after the death of the grantor, valid?—Subscriber, San Gabriel.

The recording of the deed does not effect the validity thereof one way or the other. If the deed was delivered during the lifetime of the grantor by the grantor to the grantee or to a third person to hold during the lifetime of the grantor and deliver to the grantee upon the death of the grantor, then it is valid. The clause contained in the deed as to its being recorded only after death would probably be of no effect whatsoever. The vital point is, was the deed so delivered that the grantor lost all control over it? If so, the deed is valid; if not, it is invalid.

### A MILCH GOAT RECORD

The university farm has among its prize-winning and record-breaking stock a milch goat which has just completed a milking test and broke the world's record.

The doe is a Toggenburg goat, and in the 365 days of the test she gave 2,957 pounds of milk. The old record was about 2,650 pounds. During her best week she gave 76 pounds.

The little animal weighs about 120 pounds, and the amount of milk given during the year is equal to over 20 times her body weight. These statistics give her the record of producing more milk in proportion to her body weight than any cow or goat on record.—W. J.

Officers of the National Livestock Association are Ike G. Pryor, San Antonio, Texas, president; T. W. Tomlinson, Denver, Colorado, secretary.

### DISK THE ALFALFA THOROUGHLY

**W**E HAVE found that it pays well to disk alfalfa thoroughly in the spring. We have one field at Butte City Ranch that we went over eight times with the disk last season, and it will get as much or more now as soon as there is moisture enough. Leo. Mitchell has a field of alfalfa near Willows. The soil is a rather heavy type, and by disking, manuring and careful watering he has made phenomenal yields. He believes in disking or harrowing between cuttings in addition to the thorough winter disking.

### ABOUT PICKING BOXES AND DRYING TRAYS

We will require a large number of picking boxes and drying trays at the Monroeville orchard this season, and we have been discussing prices with various dealers for some time. A few days ago one bidder on the lot called up and said that the entire output of the mill or factory from which he received supplies was about to be sold—and that if we expected to get anything from him he would have to know very soon. When called up another dealer who had wanted to make a bid—a very good friend of ours—and he said: "I have not been able to get a price for you at all yet. I am afraid it is going to be hard for anyone to fill that order."

Told that we had one bid, he said "My advice to you is to give your order at once. I would like to get the business and I don't know what price has been made to you, but my advice is to buy them."

This incident is related for what it may be worth to any who have to buy such material this year.

### TREE SURGERY

Driving through Vaca and Santa Clara Valleys it is interesting to note that the practice of tree surgery is on the increase. In one old prune orchard a great many trees had been treated and saved for many years of usefulness.

State Forester G. M. Homans is an enthusiastic advocate of tree surgery and is doing a good work in "spreading the gospel." He is always ready to give demonstrations and explain the fine points of the operation, which is not at all complicated.

The principal thing is to remove all of the rotten and decayed wood, cutting everything back to the live cambium or growing layer of the tree. If in the removal of the decay a hole is excavated this may be filled with concrete, mixed four parts of sand to one of cement, leaving a smooth rounded surface similar to the part removed. Then the new bark will grow all over this in time if there is sufficient life and vigor in the tree. If there is sound wood beneath a little decay this can be painted to prevent further decay. The job is very much like dentistry.

### KEEP BIG NOXIOUS WEEDS DOWN

It is neither a good thing nor a patriotic thing to let big noxious weeds grow and use moisture and other plant food that should go to make better things. The best time to control these weeds is when they are just starting, and the best implement to use for cleaning is a small flock of sheep.

### LABOR ECONOMY IN THE DRY YARD

We have been visiting a number of dry yards in the Sacramento and Santa Clara Valleys recently. That there must be a big difference in the cost of handling prunes and other dried fruit is very apparent. Some plants are extremely crude and require a maximum of hand labor. Others, not only because of up-to-date equipment and labor saving devices, but because of the way the work is planned, make it possible to handle large tonnages rapidly and cheaply. C. B. Harter at Yuba City has one of the best plants we saw.

Right now is a good time to do some planning for next summer's work.

Head work now should lighten back-aches next August and September.

### UNDEVELOPED LIVESTOCK POSSIBILITIES

The possibilities for the extension of the pure bred live stock industry in this state are so great as to be almost staggering.

Take the matter of location for live stock breeding plants, for instance. Along every concrete highway—everywhere—there are dozens, hundreds, of locations that would be ideal. In fact there are not many good farms in the state but that are capable of support-

ing good registered animals profitably. Of course the time when every farm in the state will have pure bred stock will probably never come, but a good many hundred new ones should be started every year.

### SPRAYING EVERYWHERE

Spraying outfits are at work in all orchard sections. A great deal of oil emulsion has been used during the winter, and lots of lime and sulphur has been and is being applied.

A well equipped spraying outfit kept in good repair is well placed orchard insurance.

### CLOSED CARS

In an agency of a popular medium priced car in Willows I saw a well-to-do farmer looking at a closed car. He

was figuring on trading in his old car for a new one and had decided that for all season work the closed car would be best for his use and that of his wife.

"Why should we freeze when we come to town or go to church or to the farm center meeting?" he said.

And when you come to think of it, who has greater need for—or better deserves—a closed car than the farmer? When one such appears in a neighborhood it is sure to be soon followed by many more.

As soon as the war is over the director of the National Park Service hopes to add to the lands of the Sequoia National Park and other national parks and through a system of nationally constructed highways, make them available to all the people.

## "Yes, I Plant With Dynamite Now"

"The orchard that used to occupy this ground was planted in spade-dug holes. It never amounted to a hill of beans.

"But last winter I got hold of a book on the use of dynamite in planting. Then I asked some of the neighbors about it. I found that a lot of them, the very fellows who raise the best fruit and the most of it, use dynamite.

"Now I'm making a good beginning by planting this new orchard with

## HERCULES DYNAMITE

"I'm saving time and money on the job right now. With dynamite you get about twice as many holes in half the time you do with a spade. But the big point is this—according to what I've learned this orchard will bear a year earlier than any of my others have, the trees will live longer, they will give better fruit and more of it.

"It's reasonable that they should too. When you dynamite a hole the ground is well broken up. There are no hard

sides for the roots to fight with. They just spend their time growing and thriving—making a strong, healthy tree. And the tree enjoys life and does its best, like a boy that's well fed and well clothed.

"If you aren't using Hercules Dynamite for planting write for the book, 'Progressive Cultivation'. It will be worth a lot of money to you. At that it's sent free on request. Just use the coupon below."

## Treatment of Seed Potatoes

By D. C. George, Plant Pathologist, Arizona Horticultural Commission

POTATOES are subject to a number of diseases the most important of which in Arizona are rhizoctonia and scab. Of these two the former is by far the more serious. In connection with the treatment and control measures recommended the appearance of the disease upon the tubers and some other general characteristics are briefly considered.

### Rhizoctonia

This disease appears upon the tubers as small, warty, dark-brown elevations, resembling dirt particles that will not rub off. These structures are known as the sclerotia and are much more conspicuous when the tuber is wet. Frequently the disease causes a slight corrosion or roughening of the skin to which the term "russet scab" has been applied. This stage is usually associated with a deep, wide crack or split very much roughened and reveals beneath it a deep pocket or pit resembling the work of some insect. The object of seed treatment is to kill all the sclerotia or any other part of the fungus that might be present upon the seed tubers.

### Scab

Potato scab appears upon the tubers in crust spots, deeply cracked and furrowed. In serious cases these spots may join together, causing a general roughened appearance over the surface of the tuber. Scab develops no sclerotia or other structure upon the surface of the tuber and causes no pits or pockets as in the case of the rhizoctonia.

### Similarities and Differences

The rhizoctonia disease is caused by a soil fungus common in many soils and supposed to be a native in some. Scab is caused by a soil bacterium common in nearly all soils and especially prevalent in soils with a high humus content. Rhizoctonia is espe-

cially favored by an acid soil and scab by an alkaline soil. Rhizoctonia is lessened by the use of barnyard manure while scab is increased by its use, especially if the manure is fresh. It has recently been determined that the organism causing scab is very prevalent in humus material in the process of decomposition. Both diseases develop best under high moisture conditions and when once established in the soil will remain there for indefinite periods. Both attack such crops as beets, turnips, mangels, rutabagas, etc. but have never been found causing injury to such crops as wheat, oats, or barley. Rhizoctonia and scab are both subject to the same seed treatment. Formaldehyde is effective against scab but is very unsatisfactory against rhizoctonia, while the corrosive sublimate solution is effective against both diseases.

### Control

In the control of these diseases the following system should be followed:

Use clean seed. Rotate crops. Select soil known to be uninfected. Treat the seed.

The treatment recommended for both the rhizoctonia disease and scab is as follows:

Corrosive sublimate, four ounces; water, 30 gallons. This strength makes a one to 1000 solution. The seed potatoes should be covered by the solution from 1½ to two hours.

The following should be strictly observed:

Treat all seed in wooden vessels such as candy pails or barrels, as the solution will corrode metal.

Corrosive sublimate is a deadly internal poison but is non-injurious to the skin and may be handled without danger.

Use a new solution to every five bushels of seed.

Never feed treated potatoes to livestock.

Treat all tubers before cutting.

## Insects in Stored Grains

Written for California Cultivator By E. R. de Ong

STORED grain is commonly infested by three different beetles: (1) The grain weevil, a dark mahogany colored weevil about one-eighth of an inch long, easily distinguished from the other two beetles by a long snout or proboscis. (2) The confused flour beetle, similar in size to the weevil, but more of a reddish brown, flat, elliptical, and without a long snout on the head. (3) The saw-toothed grain beetle, slightly smaller than the above, dull brown colored body, somewhat elongated and narrow; under a hand lens the edge of the thorax is seen to be notched like saw teeth.

The first two insects are very common on wheat and barley in granaries and storehouses, the infestation almost always occurring after the grain has been stored, particularly attacks by the grain weevil proper, since they do not fly. (The rice weevil sometimes found in grain is a winged insect and spreads more rapidly than the grain weevil). The adults and larvae of both insects feed on the whole grain and to a less extent on the by-products. The eggs are deposited on the grain. These hatch into small grubs or larvae which burrow into the solid grain, hollowing it out to a mere shell. When mature the larvae pupate inside the grain and emerge as full grown beetles, there being a possibility of several broods a year in California. The adults are found in the granary throughout the winter, but usually do not cause severe injury at this time. With the higher spring temperature and the moisture absorbed during the winter rain favorable conditions for breeding are, however, reached, and the damage increases very rapidly and continues as long as the moisture and temperature conditions are favorable. Grain well dried in the field usually contains from eight to ten per cent of moisture, which is hardly enough for the development of the young larvae or grubs. Hence, well cured new grain is practically free from attack except by the adult in-

sects found in the granary. Serious weevil injury seldom occurs until after the moisture content is raised to 12 or 13 per cent, which happens during the late fall and winter months.

The saw-toothed grain beetle also attacks whole grain but will eat almost any food substance, including sugar, bacon, and preserved fruits; their life and development is similar to that of the first two insects described. A few moths and other beetles occasionally attack grain and meal but the same treatment recommended for the above insects will usually suffice for the occasional visitant.

### Control

Infested granaries should be cleaned thoroughly after the removal of the grain, taking out all trash in which the insects might be breeding or harboring and allowing the floor to dry thoroughly. The floors and walls should be sprayed with gasoline, or engine distillate, providing there is no danger of fire. Preventive measures taken while the granary is being built will do much towards reducing the number of hiding places for grain insects and making the building easier to clean. If a wooden floor is used it should be built of matched lumber, avoiding all the cracks possible, and be raised from the ground 15 to 20 inches. The space between the floor and ground should always be kept free from chaff and waste grain. If the floor is laid close to the ground there is usually an accumulation of trash in this space which offers a good hiding place for grain insects as well as rats and mice. Concrete for the floor and two feet of the side walls is superior to wooden construction as it offers fewer hiding places and is a great advantage if it ever becomes necessary to fumigate, besides makes the granary almost rat proof.

The grain should not be stored until well cured, and if held over for one year the building should be opened and allowed to dry out or, if possible, shift the grain early in the spring so

## Make more Money Pull big stumps by hand

Clear your stump land cheaply—no digging, no expense for teams and powder. One man with a K can rip out any stump that can be pulled with the best inch steel cable.

Works by leverage—same principle as a jack. 100 pound pull on the lever gives a 48-ton pull on the stump. Made of the finest steel—guaranteed against breakage. Endorsed by U. S. Government experts.

## WITTE IRRIGATING ENGINES

**Kerosene - Distillate  
2 to 22 H. P.**

Pump your water with a WITTE. All you need is a centrifugal and my Special Model Kerosene-Distillate Engine. I can lay your engine down at least cost. Save the middleman's profit—Get your engine NOW, while prices are still low. Have reliable power for all your work. Made in standard sizes—2, 3, 4, 6, 8, 12, 16 and 22 H. P. Battery or magneto equipment. I am in a position to offer you the best prices and make immediate shipment. 90-Day Trial—5-Year Signed Guarantee. Largest exclusive engine factory in the world selling direct to user. Cash, Payments, Bank Deposit or No Money Down. Suit yourself as to terms. Don't make a deal until you have investigated my offer.—Ed. H. Witte, President.

## WITTE ENGINE WORKS

3101 Oakland Ave., Kansas City, Mo.  
3101 Empire Bldg., Pittsburgh, Pa.

## Kill Squirrels Gophers

The only exterminator that is 100 per cent efficient and guarantees results or money back, is

**KILMOL  
SQUIRLEGOPHENE**

It contains special chemicals. Kilmol fumes not only asphyxiate the squirrel or gopher, but eat away their lung tissues. Even should the animal reach fresh air, he can't survive. No other exterminator is as effective as Kilmol. That's why Kilmol costs a little more—but economy in labor warrants the advanced price. For best result use repaired waste balls saturated with Kilmol.

New formula of U. S. Government Poisoned Barley is effective in dry weather. Kilmol and U. S. Government Poisoned Barley are used and endorsed by the biggest and most successful ranch owners.

Remember, results guaranteed or money refunded.

Your local dealer carries Kilmol, Waste Balls and U. S. Gov't. Poisoned Barley.

Mfd. by Herbert F. Dugan, 1170 Sutter St., San Francisco

## POTATO PLANTERS

Come in and see the O. K. Champion line or write for Catalogue.

**California Implement Co.**

212-214 No. Los Angeles St., Los Angeles

that the sun and wind have access to it for two or three days. It is only when grain is almost damp enough to mold that weevils can breed in it freely, and this point is seldom reached unless the crop is carried over one year or more, or the roof or walls leak.

### Fumigation

When the grain becomes thoroughly infested with any of these beetles or moths, it should be fumigated, if possible, either with carbon disulphide or hydrocyanic acid gas. The exact amount of chemicals for fumigating work cannot be given as it varies with the tightness of the room. Carbon disulphide should be used at the rate of one to 20 or 30 pounds per 1000 cubic feet, and unless a room is very tight the larger amounts should be used. The gas from this chemical is as explosive as gasoline and should never be used around fires or where there is danger from sparks.

Cyanide is commonly used at the rate of one ounce per 100 cubic feet, doubling the amount if necessary when the room is of a loose construction. The gas from cyanide is so poisonous that if possible only experienced operators should use it.

All fumigation work should be done at a temperature of 70 degrees Fahrenheit or above on account of the increased efficiency at high temperatures. Keep the fumigated room closed for 12 to 24 hours, allowing no one to enter until it has been well ventilated.

\* \* \*

We may add that in addition to the fumigants recommended by Mr. de Ong many prefer Kilmol, which is a private trade marked fumigant, which has been used extensively. Some also use low grade distillate which perhaps is hardly as effective as the others mentioned. Still others run the the auto into the field where the squirrel colony is and direct the exhaust from the running engine into the holes. The economy of this last, however, is questioned by many.—Edit.

### Book Review

#### PRINCIPLES AND PRACTICE OF PRUNING

"Principles and Practice of Pruning," by M. G. Kains, lecturer on horticulture, Columbia University, published by Orange Judd Co., New York at \$2.00 net. The title page has a sentiment; "The less a tree is cut, the sounder it will be and the better its fruit," which, standing by itself and taken literally, we do not believe. Further, we do not believe the author of the book construes it literally.

The author says in his preface: "Few practices in the handling of plants, especially of fruit trees and bushes, attract so much interest as those of pruning. The methods are so varied, the results so diverse, and the apparently contradictory opinions of growers so tenaciously held, that this subject is always one of the surest to arouse discussion whenever demonstrations are given by agricultural schools and farm bureaus."

"I have had too long experience in editing books and articles to suppose that this volume is physically perfect. I therefore request that readers kindly note any least error and notify either the publisher or me, so that correction may be made in future editions. In the hope, however, that these errors will be few and that the book will meet the need of those for whom it has been written, I commend it to all who may have occasion to use pruning tools."

There are 420 pages on nearly all of which are illustrations. There are 19 chapters, touching upon Plant Physiology as Related to Pruning; The Philosophy of Pruning; Buds; Pruning Principles; How Wounds Heal; Prevention and Repair of Mechanical Injuries; Dressings for Wounds; Pruning Nursery Stock; Pruning Young Trees; Pruning Mature Trees; Care of Top-Worked Trees; Brush Fruit Pruning; Grape Pruning and Training; Pruning Ornamental Trees and Shrubs; Dwarf Tree Pruning and Training; Old Methods of Pruning and Training; Practical Tree Surgery.

The book has nothing to do with California conditions, but it has such a fund of general information touching upon principles of pruning and care of trees that its service in California will be great.

## Get the Big Price for Your Hay

**D**ON'T be satisfied with the low or in-between price for your hay. Get the big price. The quality of your hay determines the price. There is often a difference of from \$6.00 to \$10.00 per ton between choice hay and hay that grades No. 3. Make better hay—increase your hay land profits by adopting the

## JOHN DEERE DAIN SYSTEM of Air Curing Hay

Hay made by the Dain system cures better and holds its color. The leaves do not become brittle. There is little loss in handling. Hay made the Dain way keeps better in the mow, stack or bale, and is more palatable, more digestible and has greater feeding value. Whether you sell your hay or feed it, your profits are increased when you adopt the Dain system of making hay.

## Rake Your Hay With a Dain System Rake

By following the mower closely with the Dain System Rake you turn the hay while the leaves are still active, delivering it in medium size windrows on clean, dried-out stubble. Raking against the heads places the bulk of the leaves on the inside (where they cannot sun-scorch) and the stems on

the outside, insuring thorough evaporation of moisture. By adjusting the angle of the teeth, the density of the windrow is controlled, allowing for free circulation of air. Hay cured by the Dain system is air-cured, not sun-cured. The highest quality of hay is made in this manner.

## It's An Easy Rake To Operate

You put the machine in and out of gear, change the angle of the teeth, raise and lower the raking head with levers that are accessible from the seat of the machine. The Dain System Rake has unusual capacity. This is made possible by the high steel arch, to-

gether with the inclined frame, which grows in height as the windrow grows (an exclusive feature).

The Dain System Rake is making bigger hay profits for thousands of hay growers. It will do the same for you. Learn more about this valuable tool.

## Write for Free Package DS-24.

and you will get "Better Hay—How to Make and Market It," which tells all about the varieties of hay, their value, how to grow them. Tells how to cure hay, also illustrates and describes a full line of labor-saving, money-making haying tools. Beautifully illustrated.

Also the "Dain System Rake" booklet, which tells in detail how the Dain System Rake makes better hay. Illustrates the action of this rake, also tells about its construction and how easy it is to operate it. Illustrated in four colors. Write today.

Moline, Ill.**

Extra parts are always available without delay for standard advertised machinery. This class always found in the California Cultivator.

## Classified Liners

The direct selling method from producer to consumer, and a clearing-house for over 31,000 readers, weekly

Liner rates: Single insertion 3c per word; yearly contracts 2½c per word. 35c per issue minimum charge.

### TREES

**A. R. Rideout**, professional avocado budder. I will bud over your worthless avocado trees to standard varieties, Lyon, Fuerte, Bartley, Sharpless, Sinaloa or any other kinds desired. I guarantee my work. Not a dollar down until the buds start to grow. A. R. Rideout, Rideout Heights, Whittier, Cal. Phone 4971.

**For Sale**—Extra fine Valencia trees, ½ to 1½, all sour root, high buds, very thrifty, clean and straight, not fertilized, excellent soil for balling, nothing better grown. Can supply a limited acreage yet closing out entire lot of these fine trees. S. R. Coate, 564 S. Los Angeles St., Anaheim, Cal. Phone, Anaheim Pacific 403-J.

**Eureka Walnuts are the Best**—Grafted on native black roots. We also have some grafted on paradox roots, which means a hardy root system and a very prolific grower. Prices reasonable, write today, tomorrow never comes. Geyer Bros. Walnut Nurseries, 214 S. Alhambra St., Alhambra, Cal.

**Here is Your Opportunity to Secure A-1 citrus trees.** We offer several thousand 2-year-old lemons; Eureka and Villa Franca, also Washington navels; also several hundred Valencias on sweet root. We call these good trees and we know whereof we speak. **ALBERT JACKSON**, Upland, Cal.

**For Sale**—Fancy and standard varieties of Grafted Walnuts and Pecans. Largest variety of Walnut grafting wood in U. S. We are the oldest and most extensive propagators of walnut varieties in the U. S. Prices reasonable. Tribble Brothers, Lodi, Cal.

**For Sale**—25,000 2 year old uncultured citrus trees, (Navels, Valencias, Lemons) positively of the very highest pedigree quality, must be removed from young orchard this season. Price attractive. Write for information to John Hinkle, Lordsburg, Cal.

**Let Us Show You Our Ideal** twelve hundred acre orchard from which these perfect yearling citrus trees were propagated. Healthy straight stock, budded one foot high on sour root growing in our own nursery. References. R. R. Morris, East Whittier, Cal.

**For Sale**—Citrus trees all varieties. Very fancy stock, selected buds, grown at San Dimas. Splendid strong root system. Prices right. Smith Citrus Nurseries, 816 Washington Bldg.; Phone 60463, Los Angeles.

**Walnut and Almond Trees**—Mayette, Franquette, Concord, and Willson Wonder on Northern California Black root. Texas prolific and Drake seedling almonds on almond root. Stock is first class, cannot be better. Write for prices. Ekstein Nurseries, Modesto, Cal.

**For Sale**—Valencia Orange and Marsh grapefruit trees. Stock propagated only from Performance Record Trees of best type. Trees that will bear and insure profits. Write today. L. V. W. Brown, Riverside, Cal.

**Pear Trees**—Offer several thousand Bartlett, 2 and 3 feet, heavy caliper at 9c each. French prunes. Trees of all kinds. No agents; we sell direct. Write for price list. Carlton Nursery Co., Carlton, Ore.

**By Far the Lowest Priced means of reaching a buyer for what you have to sell is through classified advertisements in California Cultivator.** The cost is only 3 cents per word per issue, with a minimum of 35 cents.

**Valencia, Orange and Eureka Lemon trees** one year past, ½ to 1 inch. Pedigreed stock on sour root, high buds. We will bud 6000 choice seedlings to your order. Seed bed stock for sale. Randall Bros. Nurseries, Whittier, Cal.

**100,000 Sour Orange Seedbed Trees**—50,000 sweet; choice new stock. Trees lined out this year sure to hit high market. Better plant a few thousand next spring. Southland Nurseries, 1941 East Colorado, Pasadena.

**For Sale**—All Kinds Citrus Nursery stock, 1 and 2 year buds, fine roots. Y. Yamaguchi, Box 574. Phone Sunset 470R, Upland, 10th St. and Cucamonga Ave., Upland.

**Bartlett Pears**—French prunes, Standard, Apples, Cherries, Quinces, Plums, etc. No agents, save 50 per cent. Lafayette Nursery Co., Lafayette, Oregon.

**Olive Trees**—Mission, Manzanillo, Ascolano. Propagated by me from trees of known bearing qualities. Guaranteed. L. T. Schwacofer, Hemet, Cal.

**For Sale**—25,000 sour and sweet seed bed stock from 8 to 20 inches. Fine clean and healthy stock. One year old. John L. Preston, Anaheim, Cal. Home 1472.

**Apricots, Olives, English Morello Cherries and Arizona Ash.** First class trees. C. E. Moyer, Hemet, Cal.

**Budded Avocados**—All leading varieties. Address Mather's Avocado Nursery, 137 N. Fair Oaks Ave., Pasadena, Cal.

**Citrus Trees**—All kinds, any quantity. Butler's Morning Side Nursery, Lamanda Park, Cal.

**Florida Sour Orange seedlings**, one year old. Write for details. Katsurgi, 23rd St., Upland, Cal.

**Citrus Nurseries**, Murphy Oil Company, East Whittier, California. Selected stock for sale; inspection invited.

**Budded Orange, Lemon and Grapefruit trees**, 2 years old. K. Niwa, Box 306, Glendora.

### TREES

**For Sale to Nurserymen or Large Planters**—Owner of a large block of very fine Eureka Lemon trees will sacrifice at a ridiculously low price to those who will take a large quantity. These are not old dirty culled over stock, but strictly first class trees, clean, thrifty and straight, budded high on sour stock, never have been frosted or stunted in any way. Ground has to be vacated by June 1, so this stock will actually be sold at LESS THAN SEEDLINGS CAN BE RAISED. Address X, California Cultivator.

**For Sale**—Budded avocado trees, Lyon, Fuerte, Sharpless, etc. Lyon and Sharpless budwood for sale. Buds out from bearing Lyon trees. Every tree field grown, boxed and established. At home every Saturday. Advisable to phone or write for an appointment any other day in the week as I am away budding quite a bit of the time. Do not come on Sundays. A. R. Rideout, Rideout Heights, Whittier, Cal. Phone 4971.

**Citrus**—7000 Navels, Valencias, Eureka Lemons, two and three years. Located Whittier and Glendora. 10,000 one year Villa Franca, Lisbon, Eureka and Seedless Lemons. Located near San Diego. Clean thrifty stock. Our own budding, buds cut from record trees. You will not make a mistake in ordering this stock. Cyrus W. Wilhite, Citrus Nurseries, Glendora, Cal. Home 303.

**Must be Sold**—8000 Valencia orange and Eureka lemons, strong healthy stock, two and three year buds, sour roots. Special prices on orders of 500 or more. Opposite grammar school, Montebello. Tel. Boyle 3311 or address L. F. Thurston, R. D. 3, Orange. Tel. 3534.

**Olive Trees**—Three years old this spring. Stock taken from record-bearing grove. 3000 Manzanillos; absolutely no finer nursery stock to be had in California. Stock located near Redlands. Prices reasonable, mailed on request. J. A. Burke, 612 Black Building, Los Angeles.

**For Sale**—Grafted Walnut Trees, Placencia Perfection, 6 to 8 feet; Eureka, 4 to 6 and 6 to 8 feet. Grafted on northern black roots and scions of known parentage used. Prices right. Address C. W. Story, Rivera, Cal.

**For Sale**—The famous Tucker Franquette walnut. Splendid stock at prices you can afford. Closing out account land changing hands. Write for prices. J. D. Tucker, Proprietor, Weed Patch Nursery, 832 19th St., Bakersfield.

**For Sale**—Large stocky clean apricot trees, 1916 May buds at 20 cents, also 1917 May buds 3 to 4 feet at 15 cents, two year old roots. Packing to order extra, prompt delivery at Moorpark. Phone S-1-F-22. A. Everett, Moorpark, Cal.

**For Sale**—About 450 Eureka lemon trees (selected buds) also a few Marsh Seedless Pomeles. The lot as they stand for \$100. R. Toon, 1337 W. 24th St., Los Angeles.

**Mission and Manzanillo Olive trees**, all sizes and prices sure to satisfy. Write us at once for any amount. We want to sell. Imperial Valley Nursery & Seed House, El Centro, Cal.

**For Sale**—First Class Phillips and Tuscan Cling peaches, Eureka and Placencia Perfection walnuts, also apples, pears, plums, etc. Orange County Nursery Co., Anaheim, Cal.

**Florida Sour Orange Seedbed Stock**—Clean, straight and very vigorous. Performance Record Citrus Trees. F. H. Nushickel, Glendora, Cal. Phone 388.

**Eureka Lemons** cheap to clean up. They show their fruit buds, no better trees grown. H. Clements, Glendora.

**For Sale**—1000 first class lemon trees, ½ to 1½ inches. Free from scale. Peter Arth, Redlands, Cal.

**ENTER YOUR ORDER FOR EUREKA WALNUT BUDS NOW**—E. HOLVE, BOX 96, FULTON.

**A Few Mission and Manzanillo olives**, good stock, ½ to 1½ inch, 20c each in nursery. Roy R. Mathews, Buena Park.

**For Sale**—Choice two year old Valencia trees. A. O. Hayes, San Dimas, Cal.

**For Sale**—Citrus trees and seed stock. B. C. Dodson, Glendora, Cal.

## HOGS

**The Billiken Brand of Chester Whites**—There is right now a big shortage of swine in California. The output of 1918 will show even a greater shortage unless the farmers of this state get busy and raise more hogs. Good breeding stock is scarce and hard to get. THE BILLIKEN BRAND represents the best obtainable; they are of that mellow type that mature early and are such satisfactory easy feeders. Get started with this strain and help out the Food Administration and your own pocket as well. Write me your wants—do it today. I can still furnish first class animals at reasonable prices. C. B. Cunningham, Mills, Cal.

**Grave Wild Farm Berkshires and Guernsey Bull Calves**—Only a few more boars left from 6 months to a year old, sired Grand Leader 2d, the Grand Champion of the world. Also a few of the tops from our fall litters by Royal Superbus and Fashion Longfellow 27th, and a few bred gilts. Our herd won the Premier Breeders' Ribbon at the P. P. I. E. A. B. Humphrey, Escalon, San Joaquin Co., Cal.

**Bernsteins Herd**—"One of the Best in the West" has three great herd boars. King's Big Bone Leader, Young Jumbo, and King's Massive Orange. Watch for the sensational offering of sows bred to this great trio which sell in the Big sale of the Kings' County Poland-China Breeders at Hanford, February 20. Bernsteins Ranch, Hanford, Cal. W. Bernsteins, Proprietor.

**Hogs—Duroc-Jersey—Bargains**—Two year old, registered boar, \$35.00. One year old, subject to register, \$30.00. Send for pedigree. We shipped pigs recently from San Diego County to Yolo County. THE SAN DIEGO LAND CORPORATION, 401 Southern Title Building, San Diego, California.

**Improved Jerusalem Artichokes** produce twenty tons to the acre. The great hog feed for the winter months—the hog does the harvesting—18 pounds for \$1.50 postpaid to and including third zone, 98 pounds for \$5.00 f. o. b. Niles, 1000 pounds and over at 4 cents per pound. California Nursery Co., Niles, Cal.

**Superba, World's Grand Champion Poland-China** boar and one of the greatest sires of the breed. Spring boars ready for service, also few sows bred to this noted sire, reasonably cheap. Rough's Greenfields, Arlington, Sta., Riverside, Cal.

**Duroc-Jerseys**—Sold out of bred gilts. Two service boars. One of them an outstanding individual for sale. Also Fall Pigs, both sexes. Twenty-three ribbons on 11 entries, including 6 championships, State Fair, 1917. Frederick M. Johnson, Napa, Cal.

**Berkshires**—First prize junior boar; first and second senior boar pigs including junior champion; fifteen sows and fall open gilts sired by Ames Rival 115, champion boar; and two junior yearling bred sows priced cheap for immediate sale. F. D. Hall, Perris, Cal.

**We Pay Cash for Hogs of All Sizes**, weights and breeds. Any number from one to several thousand considered. What have you? Durbin & Forbes, 732 San Fernando Building, Broadway 4170, 3030 E. Vernon Ave., South 2712-J, Los Angeles.

**Copro (Made from coconuts)**—Best hog-feed. Your dealer, or Lee Chamberlain & Co., Los Angeles, Cal.

**Duroc-Jerseys**—15, 8 females, 6 barrows, 1 boar. Registered, life immunized from cholera. 3 months old. Price \$20 each for the bunch. Garden City Sanitarium, San Jose, Cal.

**Large Yorkshires**—The ideal hog for the progressive farmer. Service boars and fall pigs, both sexes, for sale. A. L. Tubbs Co., Callstoga, Cal.

**Recorded Poland-China** boar, 18 months old, sired by Superba. Bargain at \$50.00. Immuned, and tried breeder. C. R. Hanna, Riverside.

**PLW Durocs**—Golden Models and Great Wonders are the most consistent winners at every show. Peters, Lamson & Walker, Devore, San Bernardino County, Cal.

**Large Type Poland-Chinas** are prolific and profitable. Can furnish boars any age at reasonable price. J. A. Crawshaw, Hanford, Cal.

**Rancho Rubio Durocs** all sold out except some choice fall boar pigs. Write for prices. Elmer Lamb, Ceres, Cal.

**Greenwood Farm Durocs**—"Size with Quality." H. C. Witherow, Palo Cedro, Cal.

## MONTHLY WEATHER AND CROP REPORT

United States Department of Agriculture, Weather Bureau, San Francisco, California, March 4, 1918.

February rainfall in California was decidedly above normal, except in the extreme north and extreme south portion of the state and in the Owens Valley, where it was slightly less than usual. The rains during the last half of the month were very beneficial and although the amount was large, they fell gently and consequently soaked well into the soil without causing any washouts or damaging floods. Those sections of California needing rain the most received the greatest amounts. Slightly over 50 per cent of the seasonal rainfall has so far occurred, and not only is the ground water at a lower level than last year, but there is a shortage of well packed snow in the mountains upon which the late supply of water for irrigation and power purposes is obtained, therefore it will be necessary to conserve the supply on hand by every means possible. Temperature during the month were nearly normal. There were frequent frosts, but none was severe enough to cause serious damage.

Farmers are now exceedingly busy in plowing and seeding their land. Most of the wheat, barley and oats have been planted, but a few are still seeding grain, which if it does not mature will be cut for feed for stock. The early sown wheat, barley and oats are coming up and stooling nicely. Corn planting has begun in the southern counties. No rice has yet been planted. Potato planting and gardening have become general, and the planting of sugar beets has begun in a few places. A large acreage is being prepared in the San Joaquin Valley for Egyptian long staple cotton, a new crop which promises to be of commercial importance in that locality. In the Imperial Valley much land is also being prepared for cotton, but none has yet been planted.

Alfalfa is now growing rapidly and can be used for feed for stock if necessary. Pastures and ranges are improving and new grass in the hitherto dry sections is getting high enough to furnish some feed to the starving cattle. In the northern counties pastures were never better and stock is in fine condition. The weather during the month was favorable for lambing and no losses of consequence have occurred in the sheep folds.

Almonds are in full bloom and apricots are beginning to blossom. The buds are swelling rapidly on fruit trees and the orchardists are busy cultivating orchards and vineyards and spraying fruit trees. Lemons and oranges in the south are maturing nicely and they were also benefited by the recent rains.—E. A. Beals, District Forecaster.

## HEREFORD SALE

The biggest event in Hereford cattle history in California will be the public sale at the University Farm at Davis. About 75 head of the best Hereford cattle in the West will be offered for sale, and there will be more females than bulls.

The lead taken by big cattle firms in bringing out registered bulls in carload lots to be turned out with the range cows, has made it certain that the business of raising pure bred cattle will continue to be profitable.

## FLUID GRAFTING WAX

Paul Kruger, Watsonville, is placing on the market a most handy preparation which might well be in the hands of every orchardist. It is a fluid grafting wax of value in grafting, tree wounds, etc.

# Straight Answers to Timely Questions

## What is Pratt's Poultry Regulator?

A positive tonic and conditioner for poultry of all kinds and ages. A health-builder and health-preserver. Not a food.

## What does it contain?

Roots, herbs, spices, mineral substances, etc. Each ingredient performs a certain duty. The combination spells "health insurance."

## What does it do?

Pratt's Poultry Regulator makes and keeps poultry healthy, vigorous and productive. It sharpens the appetite, improves digestion and circulation, hastens growth and increases egg-production. It saves feed by preventing waste due to poor digestion. It prevents disease by keeping the birds in condition to resist the common ailments.

## Has it been fully tested?

Yes! In general use for nearly fifty years. The original poultry conditioner. Imitated, but unequalled.

## Does it give general satisfaction?

Positively! Satisfaction guaranteed or money refunded. Test it at our risk. Increased egg-production will prove that "Pratt's makes hens lay."

## How is it best used?

Daily, in small quantities. For adults, a tablespoonful daily for 10 birds. Younger stock in proportion. Mix with dry or moist mash.

## What does it cost?

Nothing, because it pays big profits. One cent a month per hen is the investment required.

## Where can I get it?

From 60,000 Pratt dealers. There is one near you. Direct from the manufacturer, prepaid, if your dealer can't supply you.

## How can I learn more about it?

Ask the Pratt Food Co., Philadelphia, for valuable FREE BOOKS on poultry keeping. Write today!

## "The Early Bird-----"

Written for California Cultivator By Jean A. Koethan

IT IS almost too late to say, "Hatch early," for the early chick is already out of the shell, or at least ready to pip it. Incubators have been running for two months, and the brooder houses on all the commercial poultry plants are full. Only the backlotter and the farmer are waiting for broody hens or better weather, and it is not too late to remind them of the old proverb and its modern application. If we want fall eggs and plenty of them; if we want fryers that will pay for their feeding; if we want to get our chicks up and out of the way before the heat and drouth of summer wither the volunteer green growth that is such a potent factor in chick life; if we want vigorous chicks that will grow "for all that's in them," we must be up and doing and get those chicks out of the shell before the first of April. Never mind if the hens don't go broody. There are other ways of hatching. Never mind if the breeding stock doesn't lay as many eggs or as fertile as you think they should. There are other breeders beside your own. Never mind if you cannot decide, like a friend who called up yesterday, whether you want White Leghorns or Barred Rocks or Black Minorcas, hatch something or buy something ready hatched. If you cannot decide what breed you prefer, toss up a penny, and let that decide. Only get some kind of chicks started in your back yard, and do it quick.

We have been told a good many times that pullets of the Mediterranean breeds need not be hatched before April. This is partly true and partly error. White Leghorns hatched in April ought to lay in October. Probably most of them will, but there are some that will want a little more time for maturing, and others that will not be quite up to their best production by October. Some pullets loiter a little the first month of laying, and most lay a smaller egg at the start than they do after a couple of months. If seven months instead of six are allowed them for coming to full maturity a more reliable egg output is assured. As for pullets of the heavy breeds, seven months must be allowed all of them, and eight months is better. Some will lay at six months. My experience is that Orpingtons may usually be counted on to lay at from six to seven months, but they are an exception to the general run of heavy hens. Something depends on care and feeding, something on strain, but it is a good plan to give the American breeds and Orpingtons eight months in which to attain complete laying maturity, and the Asiatics more time than that. Light Brahmas require from nine to ten months, which is a good deal of a handicap to them in comparison with other breeds. With these figures clearly in mind it is evident that if anything like full production is to be expected by November, hatching must be done before April.

But what about the fall molt which has been in former years such a bugaboo to those who wished to hatch early? While it is true that most Leghorns and many heavy hens hatched in February will molt in the fall, it is also true that the molt is an eccentric thing in California at the best, and seems to depend on weather and feed and a variety of other things. One of my two-year-old Orpington hens is going through her fall molt now, in February. Whether it was because she could not take time to molt before, or that the hot weather confused her, I do not know. The fact remains that she is molting. Some Leghorn hens molt twice in a year. Some February pullets begin to lay in July and then molt with the yearling hens in October. Some begin laying in September or October and lay right on through the winter. One never knows what will happen, so why worry about it? The fact is, that even among commercial poultrymen, who keep White Leghorns exclusively, February is coming to be preferred as a hatching month. One man hatches in February because he has found the early pullets are less liable to have chicken-pox in the fall. Another says they probably won't molt in the fall and he is perfectly willing to take the chances on it, for he will get a good many summer eggs

in any case. Another hatches early because he thinks he gets stronger chicks in cool, damp weather, another because he is naturally forehanded, and doesn't want to be bothered with young stock in the summer. Whatever the reason, they are all doing it.

The most common reason, I suppose, for delay in hatching among farmers is lack of broody hens. Few hens go broody in cold weather, and how can one hatch without a hen? How indeed? Well, why not try buying 50 chicks or so already hatched? One can get Leghorns in numbers to suit in any goodsized town in Southern California and in most of the smaller places. Most of these Leghorns are from bred-to-lay stock that is vastly more productive than the average farm hen. Buying day-old chicks is so much cheaper than keeping breeding stock that many large egg ranches now depend entirely on buying their chicks. If one does not care for Leghorns a little study of the advertising columns of poultry and farm journals and daily papers will bring to light many persons who have for sale chicks of other breeds. Most fanciers sell a few chicks if they are ordered in time. Not infrequently some one close by may be found who will sell not only chicks but the hen that hatches them.

Sometimes a broody hen can be bought. Sometimes she can be borrowed. If a single hen can be set, she may be given, when she comes off, a few artificially hatched chicks to mother with her own brood. A good hen can easily mother 20 chicks, and it is a great pity to waste her time with less than ten unless you are hatching your own eggs and care more for pedigree than for number.

If you have your own hatching eggs and no broody to hatch them with, you may possibly find some hatchery that will do custom hatching, that is, take your eggs and hatch them for you at so much per. When the hatching is well done, this is the best way I know of getting early chicks. You keep your own stock, have all the benefit of line breeding and careful mating, and yet can have your eggs hatched and delivered to your own brooder for from two to three cents per egg. I visited a hatchery recently that was doing custom hatching for two and one-half cents per egg, and doubtless there are many others. One needs a good brooder for mothering either the custom hatched or regular day-old chicks, but is saved the greater expense of running an incubator. Some fanciers do use the small incubator, but almost any of them would prefer custom hatching if he were sure it would be done by an expert.

I have said nothing about the farmer who postpones hatching or buying chicks because he thinks it would be cheaper to wait until his own hens are broody and set his own eggs. Such a policy is so penny wise and pound foolish that there is nothing to be said about it. Any one who will waste the golden hours of early spring and the chance of having a nice bunch of pullets ready for fall laying for the sake of keeping a few cents in his pockets has no conception of the purpose or possibilities of poultry culture. To him chickens are just chickens, and it is all one when they are hatched. The man who wants to help Uncle Sam in this time when our best is demanded of every one of us, will hatch early and buy what he cannot hatch, if by so doing he can make two hens grow where only one grew before and so increase the production of eggs.

## MORE EGGS, MORE POULTRY

Arthur A. Peters, district representative of the government poultry campaign, has arrived in Los Angeles from Washington and is located at room 504, Federal Building, Los Angeles. Mr. Peters' district covers all Rocky Mountain and Coast states. He will have the assistance of several local representatives and in addition will work through farm bureaus, state universities, poultry organizations, or other means of reaching poultry and egg producers. He will also work to induce greater production in orchard and in backyard where no poultry is now produced. Mr.

Peters has a number of bulletins and leaflets which will be helpful in this campaign. These will be sent for the asking from Los Angeles or from Washington. "First Care of Baby Chicks" has a fund of valuable information packed in two pages. The gist of the two pages is summed up in: "Keep the baby chicks warm. Have the brooder ready. Have an emergency brooder. Feed little and often. Give plenty of green feed, always pure water."

Another is an eight pager, Bulletin 656, "The Community Egg Circle." This has to do with marketing, with especial reference to cooperative marketing. Form of organization and by-laws are given.

Farmers Bulletin 624, "Natural and Artificial Brooding of Chickens."

Bulletin 682, "Simple Trap Nest for Poultry."

Farmers Bulletin 585, "Natural and Artificial Incubation of Hens Eggs." This is a valuable bulletin for everyone handling the incubator and touches the question from the study of an egg and all phases of incubation

through to disinfecting and storing of incubators.

Farmers Bulletin 801, "Mites and Lice on Poultry" gives 28 pages to discussing these exasperating pests.

Farmers Bulletin 858, "The Guinea Fowl." Guinea fowl are growing in favor as a substitute for game birds, with the result that Guineas are proving profitable.

There are also bulletins issued on Standard Varieties of Chickens, and one of this series, Farmers Bulletin, 898, has to do with the Mediterranean and Continental classes.

Farmers Bulletin 684, "Squab Raising," is a 16 pager, all about squabs.

Farmers Bulletin 791, "Turkey Raising," touches all phases of turkey raising from selection of stock to control of pests and marketing.

Farmers Bulletin 496 is by David E. Lantz and is on "Raising Belgian Hares and other Rabbits."

In ordering from the department, write Division of Publications, U. S. D. A., Washington, D. C. Do not write the Cultivator office for them.

## Little Things

Floyd Markham, Domestic Beekeeper

**M**OST of the work connected with beekeeping consists of doing little things. Those that can accomplish these little things quickly and eliminate the non-essential details are the ones that get most out of the business in cash. We often hear or read how much honey some beekeepers can extract in a day or how another can run several hundred colonies, produce a fair crop of honey and give them only comparatively slight attention, but these things are but the result of experience and systems where the details are thoroughly mastered, first class equipment used and the operator being able physically to do a great amount of work.

By reading text books and back numbers of bee-journals during spare time, one will pick up many little things that will help in making plans for the coming season. I say plans for one plan will not do. To me the production of honey is like a game of checkers or chess in which you must not only figure on playing your own men, but also the plays your opponent may make in order to play your own to win. In the game of producing honey your opponent is weather conditions.

I will mention a few little things that I have found to be time savers, most of them are not original, perhaps none are.

Most of us can and often do work when we do not feel just "fit" but we accomplish the most when we feel well. A few ounces extra clothing or shoe leather may at the end of a day make the difference between ones being tired out or still able to do some more.

A light colored shirt, a pair of paper hanger overalls made of white cotton drill, a pair of white socks and a pair of white canvas rubber soled tennis shoes make an ideal outfit for bee work; the shoes especially are light and easy and give a sure foothold when lifting and moving quickly. The overalls get dirty or rather show dirt easily but as they are

cheap several pairs can be kept on hand and they are easily washed.

When a swarm issues it should be cared for at once for another may come out and unite with them. Even when queens are clipped they sometimes cluster for some time before returning. With us the cluster is shaken into a light bushel basket and carried where we want them; in case they cluster out of reach a U-shaped piece of three-eighths iron rod is hooked on one handle of the basket and shoved into one end of a 10-foot length of conductor spout. This makes a swarm catcher that will secure a cluster if not over 16 feet off in the basket and some return and start clustering again, but one end of the conductor pipe is placed where they are clustering and the smoker applied to the lower end, this soon will smudge them off and they will "follow the crowd." Who originated outdoor feeding I do not know, but it is a good thing sometimes. Last spring we had no fruit bloom, colonies must be examined and queens clipped. Under the conditions robbers were delighted to help themselves. Tubs of sweetened water were placed just outside the yard with floats in them to keep the bees from drowning. The floats did not always descend as the feed lowered, but stuck to the sides of the tubs so some bees drowned and all the tubs at hand did not furnish enough surface so but what the bees were crowded. To remedy this, I turned up the sides of a piece of roofing steel about three inches making a shallow pan about 20 inches wide by ten feet long. In it I placed a rack made from thin strips of wood. To replenish the feed when covered with bees, I punched a hole with a 6d nail in an old ten gallon milk can and set it in the middle of the feeder. The feed was poured into the milk can and it ran slowly through the hole into the feeder thus rising so slowly in the feeder that no bees were drowned. For feeding, one gallon of honey was diluted with eight gallons of water. When feeding this way, work in the yard was as pleasant as during a honey flow. I also think it saved some colonies from starvation. Why do supply manufacturers groove the top bars of frames, make wedges, invent wedge drivers, or rabbit out one corner of the top bar to be nailed in again when a sheet of foundation can be fastened to a plain smooth bar quicker and better with melted wax? A pail of wax, kept hot over a small lamp stove and an old spoon with the point turned up to form a sort of spout is all that's needed. The sheet of foundation is pushed close against the top bar while the wires are imbedded, the frame is then held in an oblique position while melted wax is poured at the higher end and allowed to run down the bar along the foundation; just as it reaches the lower end the frame is reversed and the other side treated the same. It takes no more wax than you would put in a groove and you gain a row of cells in each frame.

# Extra Tested

## RACINE Country Road and Multi-Mile Cord TIRES

This Racine Rubber Company message tells why, when tires are talked of, you hear such good words for Racine Country Road and Racine Multi-Mile Cord tires.

And all without previous advertising—save word of mouth praise, one tire buyer to another.

### Extra Tests Mean Extra Value

In Racine Rubber Company factories, tires and tubes of character are built. Distinct Extra Tests are applied, step by step. This extra care in the factory means extra wear on the road.

Racine Extra Tests assure you of fabric perfection and strength—of rubber fitness—of accurate compound—of fabric and rubber proportion—of inside smoothness—of tread weight—of exact, uniform cure—of wearability.

Racine Country Road—specially designed and Extra Tested for severe country road use.

Racine Multi-Mile Cord—Extra Tested cord tire of true quality.

Also Extra Tested red and gray tubes.

## The Home Garden

Written for California Cultivator By Ernest Braunton

**T**OO often the garden builder seeks for stunning effects. He wishes for something unusual in that it must be curious or wonderful. But the trend of the times is so strong toward such productions in all lines that one may gain "unusual effects" now only by seeing how simple yet beautiful he may have everything. And incidentally he will thereby attain the highest success when judged by the rules of art and will also accomplish the most soul-satisfying results.

So-called "stunning effects" usually succeed in stunning all of good taste who view the work. Striking effects are in the same class; they generally strike at the very roots of art. Do not get the "look-at-me" type of gardening in your mind. Build that you think should be and care not a whit about what the other fellow will say in commenting thereon. I often wish that a few at least would build gardens where none could see them ex-

cept friends of the family. This is often the case in England, where cottage gardens are hidden behind wall or hedge, and there only do you find the real home life. I do not like, nor do I approve of the open front yard style so prevalent in Los Angeles and elsewhere in California. If one also has a side or rear garden of merit I can love him well, but if all his effort is lavished on what he may show to the vulgar passing herd, he is not of mine.

Think of calling a place home where you step from the house only into the full gaze of the passerby, without any seclusion, privacy or snugness! Every person of taste craves a den, library, or some other room that is not open to all who call. If he does not crave the same effect in the garden he has not caught the spirit aright, or indeed at all. He is a mere copyist who is a trailer or follower, who will never lead in anything. It is far better to have a little lawn surrounded with shrubbery and shaded by a tree than to have no garden or even to have broad acres of blue grass for the vulgar gaze. Robert Burns chose for his crest a song-bird on a shrub and for a motto "Better a wee bush than no field" (shel-

ter). I like to step forth into that which is mine own, not in a feeling of selfishness, but with a feeling of reverence; a place where nature shines forth on every side, yet where the handiwork of man is not painfully apparent. I always love the virgin forest, which the Irishman characteristically described as "one where the hand of man has never set foot."

### Rural Gardens

The farmer is the only one in moderate circumstances who may have a real garden, one that satisfies. Occasionally I am asked what to plant on 25 foot city lot. I have but one answer: "There hain't no sech animal." Such a piece of ground is but one-half the frontage of the minimum-sized city lot. I simply do not care to discuss the smaller piece for it is impossible of plan, having no scope for landscaping. The answer comes back: "There is space for flowers." I admit and retort: "Plant them then, there can be no question as to where they are to grow."

But out in the country one may have a stretch of lawn, not necessarily level, or too smooth, yet enough so to appear natural and easy to care for. Nothing less than a hundred feet of lawn frontage should be permitted in the country. It need not be deeper than that, but put the house as far back as is convenient. For anyone may live practically on the street,

even in the country. The rural home should smack more of generosity, comfort, convenience, intricacy, quiet and seclusion—a rural retreat. One for whom I recently planned such a place had lived a busy life in a large city and wished quietness first, a characteristic California garden and a Spanish name that was not meaningless. I suggested as a name "El Retiro" and the owner was delighted. Do not seek to make a city home in the country but have a comfortable, modest retreat, where ease and natural beauty are the chief ends sought in the garden building.

### More Vines Needed

As a rule California home gardens lack in complexity or intricacy, not in plan, but in use of plants. We need more thickets, jungles and tangles. Much of this is not permissible in the city, except in the backyard of large places, but in the country, where such effects are more or less in harmony with the immediate surroundings let us have a little of this "camouflage." Do not use roses for such work except in a limited way and in limited numbers. They are not sufficiently soft and graceful in habit. One can hardly image "festoons" in rose bushes, however much they ramble, for roses are never true climbers except a few like the Banksias. Use bignonias, jasmines, honeysuckles and the better species of common vines. In jasmines do not fail to get the primrose jasmine, *J. primulinum*, for it is the best of all and one of the best vines ever introduced to California.

### LONG STAPLE COTTON

Continued from Page 291

plant five by three feet apart this season. There is plenty of room for experimenting on the different soils of the valley.

If the land is properly prepared and planted, a good stand will be assured, using 20 pounds of seed to the acre. As soon as the cotton is up cultivation should begin and continue for three or four months before the next irrigation should be given.

It is advisable not to thin to a perfect stand as the limbs near the base of the plant will grow very large and break down, causing difficulty in cultivating and picking. It is thought best to complete the thinning in two operations, which should begin when the plants are about eight inches high.

The time to irrigate will depend on the character of the soil. Soft soil retains moisture much longer than hard soil. A good plan is to wait until the plants wilt during the day, and when the tip does not revive, then the plant should be irrigated, but not given a heavy soaking. The proper handling of the water is necessary to obtain anything like a maximum yield. The main object is to develop a large root system early and discourage vegetative branches; otherwise the plant will develop wood, and not the bolls. Experience is necessary to know the best methods to use on each type of soil. Irrigations should be sparingly used until the plants are blooming in earnest, then irrigate regularly, not omitting cultivation as long as it is possible to go between the rows.

In regard to the bed planting I wish to state that there is an experiment being carried on at the United States experiment station at Bard under the direction of R. E. Blair, the superintendent. The lands are laid off eight feet apart by using a lister, irrigating in the furrow and if necessary listing the second time, smoothing off the bed and planting on either side of the furrow so the rows are about 13 inches either side of the center of the ditch or rows 26 inches apart, which makes the rows about six feet apart in the bed. This system makes each row an outside row, and it is possible to pick at the time of irrigation. This method is in an experimental state, but Mr. Blair stated it looked very promising. There were two plots planted in the bed method, one of Pima and one of Yuma variety. There is much difference between the two varieties, as much as there is between short staple and Durango, the Pima having much less vegetative branches, the Yuma growing very large tall plants with the same culture. The Pima produces more side fruiting branches. With these few suggestions let us all do our best, keeping a record of each operation, which will be of great benefit to the industry.

# LALLEY-LIGHT

ELECTRIC LIGHT AND POWER FOR EVERY FARM

*Lalley-Light Spells  
Convenience on  
Every Farm*

## Two Plants In One At the Cost of One

Lalley-Light, in effect, is two electric light plants for the price of one. For it provides two sources of light and power, both reliable and efficient.

One of these is the storage battery. The other is the electric generator.

Current used direct from the generator—giving bright, steady light, without a flicker—does not pass through the battery. That is an economy, for the life of the battery is prolonged.

When only a few lights are required, it is more economical to draw current from the battery, with the generator idle.

Few, if any, other plants afford this optional use of generator and battery. Lalley-Light brings to your farm, electricity in its simplest, safest, surest form. Its reliability is established by nearly eight years of successful, everyday farm use.

It is so simple that even your boy or girl can run it and give it all the care it needs.

The engine, direct-connected to the generator, starts when a button is pressed. If run to replenish the bat-

tery, it automatically stops when the battery is fully charged. If the battery needs charging, a bell rings to warn you.

These are distinct Lalley-Light advantages, over and above the great comfort and convenience—the perfect safety and the proved economy—of electric light and power.

On thousands of farms Lalley-Light keeps the young folks contented; it is a boon of comfort to the old folks.

Its light is always ready—waiting, in a flood, for the turn of a switch—in house, barn and outbuildings.

Its power is ample to pump water and to run much of the smaller farm machinery, decreasing labor inside and outside the house. All at a daily cost the average farmer can well afford.

Write us at once for the illustrated free booklet which tells, in detail, what Lalley-Light is and does. We will tell you where you can see Lalley-Light in operation, and give you the cost of the complete plant, delivered to you.

Send a postal card or a letter today.

### GOD'S GIFT

By Ida M. Blake

God sent to us a gift today,  
A gift far richer than gold.  
He sent us rain, the key from heav'n  
To health and wealth untold.

To us it is a golden key  
That opens His treasure here,  
For earth will bud and blossom soon,  
Then full corn in the ear.

And when the harvest time is come,  
We gather the golden grain.  
"Oh God we thank Thee, God of love,  
Oh Thou that sendest rain."

### A STORY OF THE PLAINS

Continued from Page 284 last week

The mind of the ranchman being thus set at ease, the husband's heart began to assert itself, and John looked anxiously at his watch before vaulting into the saddle, realizing that it would mean hard riding to reach home by sunset. He set out at a gallop, his mind filled with thoughts of Alice waiting for him off in the east, and wondering how the day had passed with her. It was probably this that led him to take less notice than usual of the road he was taking, trusting to Bonny to pick her way safely. It was not until the little animal gave a sudden snort and swerved as if to wheel, that he looked up, keenly alive then to the present and its demands upon him. Bonny had stopped short and was trembling all over her body.

## BETTER RURAL HOMES

Barker Bros. are building a service—for the comfort and beauty of the rural home. Just as you are extending every effort toward greater crops and finer produce, to build a greater Democracy, so we are building a service that will give you a more comfortable home—a more cheerful home and a more substantially equipped home. Barker Bros. have the finest stocks of each branch of home furnishings on the Pacific Coast. We can serve you, in point of quality, in tasteful selection, and for the better things for your home in a better way than you can be served any where in the world.

This service we offer you through the medium of Uncle Sam's mail service—photographs, catalogues or special information on any household article—just for the asking, send us a postal—test our service. Address Mail Order Division No. 25.

**H. JEVNE CO.**

LOS ANGELES

A terrible shout rang out on the silent air, and four, five, then a dozen figures came riding madly toward him in a cloud of dust.

It was too late to think of escape, and resistance was worse than useless. His only hope, he realized, even while the sweat stood on his brow, lay in strategy, so he reined in the panic-stricken horse and let them surround him, uttering demoniacal yells as they came. They were there, they had stopped in a panting circle and one of them was taking his six-shooter. Then at a signal the party wheeled and keeping John in their midst galloped away toward the north, far, far from any white man's habitation. Oh, Alice! Alice!

It was nearly evening when they finally halted to make their encampment for the night. John saw that they were nearly all young braves, headstrong and fierce, and gloating over their capture. His experience sneered at the thought of pacifying them with anything less than blood. They had tied his wrists and taken him off his horse, and were now gathered together, evidently debating as to the best use to make of him, for they cast frequent glances in his direction as they talked. Finally, the one gray headed man in the party approached him, and in almost unintelligible English, asked him where he came from. Boynton replied with a ready lie that his home was in Ore Creek, for with the calmness of a strong man who sees inevitable death before him, he was looking ahead to the morrow, when the sun would rise upon a slender young widow and her child, in a lonely prairie cabin. The interpreter appeared satisfied with the answer and repeated it to the rest, who received it with a variety of grunts. They had built a fire, and producing a piece of raw meat from somewhere, cooked it in the blaze, and ate it loudly, as animals do when they feed. John watched it all as one in a dream. The great black prairie around them, the bright fire in their midst, the circle of savage men tearing at their food. Must he believe that this was the last night of his life? The senseless cruelty of his fate smote upon his consciousness like a whip, stinging him to action, forcing his faculties to rouse themselves from the apathy stealing over them. Like a flash the inspiration came to him, and the savages turned in amazement at his sudden loud shout.

"Listen," he cried in his most masterful tone, depending on the interpreter to explain his meaning. "Me heap big medicine man, heap big medicine man!" and putting his bound hands to his mouth, he pulled out the four front teeth, flourishing them a moment before the eyes of the astounded Indians, and returned them again to their proper place. The suspense of the next few moments was beyond the power of description. Everything depended on the credulity of these savages. Would blood-thirstiness be swallowed up in subterfuge?

The Indians had dropped their meat and sat staring fixedly at him. Then with one voice they spoke to their interpreter, who advanced respectfully toward John, and begged him to repeat his miracle. Boynton complied with growing confidence, and the effect upon his audience was this time strikingly apparent. They talked together in low tones, glancing furtively at the "medicine man" from time to time, with mighty awe not unmixed with fear in their expression. Finally the interpreter again approached him, and with many protestations announced that they had decided to make him their chief if he would consent to rule them. At the same time he unbound his hands, and made a place for him by the fire. John sat in apparent deliberation for some moments, and then replied that he would think about their plan and give them his answer in the morning. In the meantime he must have a shelter for the night, and be left alone to talk with his spirits, to all of which the Indians granted respectful acquiescence.

A rude wigwam was contrived of poles and blankets at some distance from the fire, and now Boynton made his last demand, and the one which cost him the most inward trepidation. Bonny must be tied to a stake near the shelter, he declared with a stern

brow, and immediately one of the braves rose and searched out the feeding pony. It was more like a dream than before, this bewildering change from horrible death to a position of authority, and it took all his strength to continue master of himself.

It was over at last. He was in the wigwam, and the sound of heavy breathing from the forms around the fire told him that his captors were all asleep. A stealthy step in the darkness, a whispered word in the ear of the shrewd little pony, a muffled sound of galloping hoofs growing ever fainter in the still July night. Then freedom, and a long, hard ride through the blessed darkness.

A white faced woman walking up and down a narrow cabin room with a light in the window, and wringing her helpless hands, stopped and listened, and would have fallen if strong arms had not caught her.

"Alice, look up dear, it's all right." But it was some minutes before she could answer him.—Maxwell's Talisman.

### YEAST BREAD FROM CORN MEAL AND OAT MEAL

By Margarette Walker, Anaheim

#### Oat Meal Bread

Scald two cups rolled oats with two cups scalded milk or water. Add one tablespoon shortening, one tablespoon

sugar, one teaspoon salt, allow to cool until lukewarm. Then add one cup jug yeast or one yeast cake dissolved in one-half cup warm water. Add one cup wheat flour and let stand in a warm place for one-half hour, or until light. Add wheat flour to make a stiff dough, knead well and form into loaves. Cover and set in a warm place until doubled in size. Bake in a moderate oven.

The bread can be made in much less time by using the jug yeast.

#### Corn Meal Bread

Scald one and one-half cups white corn meal with two cups scalding milk or water, add one tablespoon shortening, one tablespoon sugar, one teaspoon salt. Let stand until lukewarm, then add one cup jug yeast or one yeast cake dissolved in one-half cup warm water and one-half cup white flour. Let stand in a warm place until light. Then add wheat flour to make a stiff dough, knead well, form in loaves. Put in warm place and let double in size. Bake in a moderate oven.

Much time is saved by using the jug yeast which is made as follows:

#### Jug Yeast

Boil 12 large potatoes, mash fine, scald one cup flour with which you have sifted one-half cup sugar and two tablespoons of salt, with the water in which the potatoes were boiled.

## Right Back—Down Same Row

—Remarkable Tractor Performance!

Make Tractor You Buy PULL TOOLS Around  
Short Turns. Get FREE TRACTOR BOOK NOW.

STRAIGHT-AWAY plowing is not a complete tractor test. "Acrobatic" turning stunts without tools is no test. Watch the Bean TrackPULL Tractor PULL TOOLS around short turns, doubling back in the same row, cultivating around a tree right under the lowest branches with the tools down deep, and no strain on the tractor anywhere. Our wonderful PATENTED FRONT DRIVE FEATURE permits the TrackPULL Tractor to use full power and pull full load just as easily on right-angle turns as on straight-away with no pivoting and no overload on one wheel or track. If you want a tractor for an orchard or a vineyard or for efficient field work you'll want the Bean, because the Bean is the only tractor built to perform these necessary feats. The patents are built right into the tractor and cannot be imitated.

The Bean exerts all its power through a single track and you "gee" or "haw" this track to steer. Ten-year-old boys turn this tractor all the way around inside a ten-foot circle (5-foot radius) with perfect ease. When you hit soft spots you simply throw the track over and pull out just the same as

with a team. No digging in deeper. "Almost animal intelligence," some users say.

Don't make mistake of buying a tractor until you've seen these features demonstrated and proved. You'll save money by buying a tractor like this and you'll save time and trouble which is just as good as a cash saving.

Don't wait. Get the Bean catalog now, note the price; and learn the name of the nearest demonstrating agent, who will give you a true demonstration (no tricks or "acrobatic" stunts) to show you what a tractor ought to do on your place.

Send in this coupon now before you forget it.

## The Miracle of the Marne

The battle of the Marne halted the rush of the Germans towards Paris. It aroused the French to super-human bravery. They fought as if led by the spirit of the Maid of Orleans herself.

The Marne was a demonstration of the power of patriotism with its back against the wall. The same sacrifice of self, the same love of country and unity of purpose that inspired the French people must inspire us, and we must win the war.

We are sending our best manhood to fight for us. They must be armed, fed and clothed, cared for through sickness and wounds. This is the work of every individual as well as the Government.

It is the proud duty of the Bell System to coordinate its purpose and equipment to the other factors in our national industrial fabric, so that the manufacture and movement of supplies to our boys abroad be given right of way.

AMERICAN TELEPHONE AND TELEGRAPH COMPANY

**No Porcelain  
to break**

## Sootless

### FOR A FULL DAY'S WORK

Half a day's work on your Tractor or Gas Engine can very easily be lost through a broken spark plug.

And it may come just when you can least afford to lose it. Don't take chances. Get the spark plug that has no porcelain to break—that's SOOTLESS—the brass plug with the heat proof, oil proof, leak proof, mica insulation—preferred for farm or car use.

Ask for SOOTLESS, the brass plug—no rusting into cylinder heads.

All Dealers, \$1.25

**OAKES & DOW COMPANY**  
25 CHARDON STREET, BOSTON, MASS.

Add two quarts of cold water and when lukewarm one yeast cake, soaked in warm water until soft. Cover and set in a warm place until foam covers the top, then put in jug and cork tightly. Or put in two quart cans.

### USES FOR BARLEY FLOUR

Written for California Cultivator  
By M. E. D. H., San Jacinto

#### Corn Meal Muffins

One egg, teaspoon of salt, two cups of sweet milk, one cup corn meal, one cup barley flour, grease muffin pans well, then beat into batter a tablespoon of melted fat, two teaspoons of baking powder, cook in a hot over.

This recipe may be varied by the addition of any cold rice, oats, mashed potatoes or bread crumbs. In that case decrease the amount of barley flour. Or you may decrease the amount of corn meal and increase the amount of barley flour. It makes a nice breakfast bread.

#### Biscuits

One cup barley flour, one cup white flour, one cup whole wheat. Three rounding teaspoons of baking powder, one teaspoon of salt, one rounding tablespoon of fat, enough sweet milk or water to make a dough stiff enough to handle, roll out, cut into biscuits, bake in a hot oven to a nice brown.

#### 50-50 Biscuits

Equal amounts of barley and wheat flour, a tablespoon of lard, teaspoon of salt, three teaspoons of baking powder, enough water to make a stiff dough. Roll out, cut, bake in hot oven.

### HOUSEHOLD QUERIES

#### Eucalyptus Portierres

Will some of the readers please tell me how to proceed to make a portiere of eucalyptus buds? What kind of twine to string them on, what kind of beads are most effective, and be sure to tell me how to finish the lower end of strings, also how to make the part that goes over the pole. Shall greatly appreciate someone's giving me this information. — Subscriber, Porterville.

### CORN MEAL RECIPES

The Sperry Flour Company is sending out these good ones. You will notice they are also economical.

#### Corn Meal Griddle Cakes

Three-fourths cup corn meal, one-fourth cup corn starch, one-half teaspoon salt.

All materials for use in cooking should be measured by level spoon or cup. All dry materials should be sifted before being measured.

Sift together. Pour over it three-fourths cup boiling water. Stir quickly. Add gradually one-half cup milk, one egg well beaten, two tablespoons flour and three teaspoons baking powder which have been sifted together. Beat well. Bake on a hot well greased griddle until brown.

#### Southern Corn Bread

Two cups corn meal, two cups boiling water, one-half cup sour milk, two tablespoons sugar (if desired), one teaspoon salt, one-third teaspoon soda, three teaspoons baking powder, two eggs (well beaten), two or three tablespoons melted shortening.

All materials for use in cooking should be measured by level spoon or cup. All dry materials should be sifted before being measured.

Measure and set aside all material. Pour the boiling water over the corn meal and stir quickly. Then add the milk, the soda, the salt, sugar, eggs which have been beaten, baking powder and lastly the shortening. Stir quickly, then pour in well greased muffin tins. Bake 15 minutes at 450 degrees.

#### Eggless Muffins

One cup corn meal, one-half cup flour, one teaspoon salt, two teaspoons baking powder, one-fourth cup sugar, one cup milk, two tablespoons melted shortening.

All materials for use in cooking should be measured by level spoon or cup. All dry materials should be sifted before being measured.

Mix dry ingredients. Add milk, melted shortening. Pour in well

greased muffin tins. Bake 30 minutes at 350 degrees.

### Sour Milk Corn Bread

Two cups corn meal, three-fourths teaspoon soda, one teaspoon baking

## Gas 'em!

Kill off the whole crew of crop destroyers—squirrels, gophers, prairie dogs, etc.

Gas 'em with Carbon Bisulphide quickly, easily and economically.

One burrow of squirrels will destroy more grain than your family can save in fifty wheatless days. Remember—these ground pests cost the farmers of the Pacific Coast more than \$6,000,000 last summer. So be forehanded—be truly patriotic—conserve the seed in your fields.

The University of California says: "From November until the end of February (the rainy season in California) the best way to attack the ground squirrels is to fill their burrows with gas from Carbon Bisulphide."

So too in other states! If the ground is full of moisture, whatever the month may be, Carbon Bisulphide is the best killer of squirrels, prairie dogs, gophers, etc.

A squirrel killed before March is worth a dozen killed later. Because—most young squirrels are born late in March or early in April. So gas the old squirrels now. Write today for prices and interesting folder telling how Carbon Bisulphide—the profit-saver—works.

**WHEELER, REYNOLDS & STAUFFER**

626 California Street  
San Francisco, California

## Use CARBON BISULPHIDE

### THE SELF-OILING WINDMILL

has become so popular in its first three years that thousands have been called for to replace, on their old towers, other makes of mills, and to replace, at small cost, the gearing of the earlier Aermotors, making them self-oiling. Its enclosed motor keeps in the oil and keeps out dust and rain. The Splash Oiling System constantly floods every bearing with oil preventing wear and enabling the mill to pump in the lightest breeze. The oil supply is renewed once a year.

Double Gears are used, each carrying half the load. We make Gasoline Engines, Pumps, Tanks, Water Supply Goods and Steel Frame Saws. Write AERMOTOR CO., 2500 Twelfth St., Chicago

**SMITH-BOOTH-USHER CO.**

## RHUBARB

PLANT YOUR LAND NOW TO WINTER RHUBARB  
You should get big crop by next fall. Others making \$1000 per acre, so can you with WAGNER'S GIANT—plant no other. Get your plants from originator and avoid disappointment. J. B. WAGNER, Rhubarb and Berry Specialist, PASADENA, CAL.

## The Cultivator Patterns

8727—Children's Set. Cut in sizes 2, 4, 6, 8 and 10 years. This pattern consists of a one-piece dress, gertrude petticoat which may be used for an underwaist, and a pair of one-piece drawers.

8068—Ladies' Shirtwaist. Cut in sizes 36, 38, 40 and 42 inches bust measure. The ends of the notched collar extend into tabs which cross and form the front closing.

8113—Ladies' Waist. Cut in sizes 36, 38, 40 and 42 inches bust measure. The fulness of the back and fronts are gathered to the shoulder yokes; the waist buttons at the center back.

8691—Misses' or Small Women's Dress. Cut in sizes 16, 18 and 20 years. The waist is slightly long-waisted; the skirt has two gores and is gathered all around.

8696—Ladies' Coat. Cut in sizes 34, 36, 38, 40 and 42 inches bust measure. The jacket has one button closing, and is cut away from this point to show the skirt.

8174—Girls' Dress. Cut in sizes 6, 8, 10, 12 and 14 years. This one-piece dress has the panel and yoke in one piece at front and back.

8708—Ladies' Two Gored Skirt. Cut in sizes 24, 26, 28, 30 and 32 inches waist measure. The skirt is two-gored; the front gore is fitted and the back gore is gathered to the slightly raised waistline.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH.

### HOW TO ORDER PATTERNS

Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2 cent) stamps for each number. In order to furnish our readers with the very latest New York City styles, all pattern orders are filled in New York City. Therefore, we promise to deliver all patterns ordered within two weeks; we guarantee safe delivery of all patterns. Address

Pattern Department  
California Cultivator  
Los Angeles

powder, one teaspoon salt, one egg (well beaten), one and one-half tablespoon melted shortening, two cups sour milk.

All materials for use in cooking should be measured by level spoon or cup. All dry materials should be sifted before being measured.

Mix dry ingredients. Add milk, egg, melted shortening. Bake in a shallow pan 30 minutes at 350 degrees.

### SCHOOL CHILDREN PAINT POSTERS

When the advertising department of the Indiana office of the United States food administration sent out a hurry call to 500 Indiana art teachers not long ago, school children throughout the state of Indiana began to paint posters and coin slogans. Some slogans that would do credit to a trained copywriter have been the result. Among them are these:

"Be canny with food."  
"Peel thin and win."  
"Not that we love food less, but that we love Liberty more."  
"Spread butter thin—help the Sam-mies get Berlin."  
"Be a Conservation Bee."  
"Bread and Buns Will Beat the Huns."  
"Fill All Cans but Garbage Cans."  
"Can Until You Can't."  
"Every Spud Is a Bullet."  
"Save Bacon Until Berlin Is Taken."  
"Save Navy Beans. 'Twill Sink the Submarines."  
"Wise Wives Won't Waste."  
"Kill Kaiserism in the Kitchen."  
"Every Hoosier Help Hoover."  
"Join the Diet Squad."  
"Eat Fish—a Good War Dish."  
"The Nation Beats That Saves the Eats."  
"Pickle and Can for Uncle Sam."  
"Save Pieces for Peace."  
"Throw Away Your Frying Pan. Bake, Broil and Boil All You Can."  
"Save! The Kitchen Is Your Fort."

### NO DENYING IT

It was the rush hour in one of those quick-lunch places where you help yourself and use the arm of your chair as a table. A man called for a piece of pie and chose a chair; then, remembering that he wanted coffee, he dashed over to the service counter. When he returned with his coffee the chair was occupied by another hurry-up diner.

"Excuse me," said the first man, "but that is my chair."

"How do you know it is your chair?" demanded the occupant in a surly tone.

"Because I can prove it," stated the first man.

"How can you prove it?" asked the occupant.

"By your trousers," was the reply. "You are sitting on my pie."

### SYSTEM IS A GOOD THING

How many housewives have a well laid plan for the tasks of each day? There are certain duties that must be accomplished daily, one day laid aside for "general cleaning up," and then the planning generally ends, all other varied tasks being thrown in as time permits. This necessitates a great waste of time in making fresh decisions constantly and many are the worries consequent upon leaving things which mean family comfort undone.

### IMPOSSIBLE

Short: "I say, old man, can you lend me ten dollars?"

Longley: "Impossible. I've tried to lend you money several times, but you always seem to look upon it as a gift."

### THERE ARE MANY SUCH

"I don't see why you call Perkins stupid. He says a clever thing quite often."

"Exactly. He doesn't seem to realize that it should be said only once."

### EQUAL TO THE OCCASION

"John," demanded the wife of her intoxicated spouse, "how did you get that gash on your forehead?"

"Guess I must 'a' bit myself."

"Bit yourself!"—scornfully. "How could you bite yourself 'way up there?"

"Guess I must 'a' stood on a chair."

—Exchange.

## A Piano House of High Ideals

In the last quarter of a century Sherman, Clay & Co. have occupied a position on the Pacific Coast, second to none, building carefully from day to day a reputation for selling only goods of merit, of true musical worth and asking only fair and consistent prices.

Our customers and friends are legion. We are most careful what we recommend and when we do recommend, it is with the desire to serve the customer and serve him well. We study his needs with the desire to place in his home the instrument that best suits his purpose without it being an undue strain upon his pocket book.

We have only one price—the price tag on every instrument is in plain figures—there is positively no deviation from that price.

We offer no "special" inducements, no insurance, no "club" prices, no free music or scarf (bench or stool of course are considered part of the piano). We do not have "sales" on one pretext or another. Our prices are fair. We aim to be consistent—to sell good reliable instruments at a reasonable price.

We pay the freight anywhere in our territory. We gladly arrange convenient payment terms on any instrument.

If you are in the market for a Piano or a Player Piano, it is to your interest to call upon us or write us for information—to see what we have to offer.

We invite you to call at any of our stores—or write us asking for illustrated catalogues and prices.

We are dealers in Steinway and other Pianos, Pianola Pianos, Aeolian Player Pianos, etc.

## "The store where I do my trading"

THROUGHOUT the West—go where you may—big town, small town, cross-roads store—there you will find Ghirardelli's.

This West-wide distribution has been made necessary by demand—a demand for a delicious, sustaining food-beverage; a demand that is met by Ghirardelli's, and by this alone.

Result? Today Ghirardelli's Ground Chocolate is in daily use in more homes in the West than all other brands combined.

As a beverage it is beneficial; as an aid in baking and cooking it is invaluable.

Be sure to ask for it—at "the store where you do your trading."

In ½ lb., 1 lb. and 3 lb. cans; a tablespoonful—one cent's worth—makes a cup.

Red Kidney .....13.00  
Cranberry .....12.50  
Teparies .....10.50

**RICE**  
By agreement between the growers and millers of rice and the food administration, prices for California rice have been fixed as follows: Paddy rice, \$4.10 per 100 pounds to the growers; cleaned rice, \$7.10 per 100 pounds from the mills to the trade, and \$8.00 per 100 from jobbers and wholesalers to the retailers.

**HAY**  
Under date of March 2, Scott, Magner & Miller says:  
Receipts of hay for past six days have amounted to 1250 tons. The demand for hay in San Francisco and Oakland has continued along very moderate with no particular features to draw one's attention.  
The demand at country points has fallen off considerably since the rains and for the reason that many have bought hay to feed their stock temporarily and have now ceased buying, figuring that they would have grass very shortly and would not require further.  
The interest of the entire grain, feed and hay trade has been centered this week around the United States food administration declaration to regulate the entire industry.  
Fancy Wheat Hay, (light 5 wire bales) .....29.00@30.00  
No. 1 Wheat or Wheat and Oat Hay .....27.00@29.00

New Black .....3.25@3.35  
Rye, Utah .....4.00@4.25  
Wheat — Government prices: Common white hard, base price is \$3.50 per cental, or \$2.10 per bushel of 60 pounds delivered in terminal warehouses in bulk; soft wheat, base price 2 cents per bushel less, or \$2.08 per bushel; white club (including Sonora), \$2.06 per bushel. If wheat, after cleaning, weighs 60 pounds or more to bushel, base price stands; if 58 to 60 pounds to bushel, 3-cents per bushel reduction; if 56 to 58 pounds, 6 cents per bushel less; if less than 56 pounds, grain becomes sample grade and sells on its merits up to within 1 cent per bushel of 56-lb. wheat. Sacked wheat 4 cents per bushel more, less tare for weight of sacks.

**FEEDSTUFFS**  
These prices applicable to San Francisco, with \$1.00 less at Sacramento and Stockton, are for cash at the mill in carload lots, and include sackage, with an additional rate of 50 cents per ton in less than carload lots.  
Wholesale prices per ton. Prices fixed by food administration as San Francisco price; Sacramento and Stockton \$1.00 less on carlots at mill door:

Prices in round lots, lb.:  
Millet, recleaned .....4½@5½  
Alfalfa .....20@21  
Flax .....6@6½  
Hemp .....4½@5½  
Rape .....2½@3

### Citrus Fruit Market

Los Angeles, March 6, 1918.  
The only comment possible on the market this week is that prices are higher and every offering is picked up. Lemons are especially strong.  
**Shipments**  
Shipments of citrus fruits from California to date, since November 1, 1917: Southern California, oranges, 4371; lemons, 1164; total, 5535. To same date last season: Oranges, 9677; lemons, 2003; total, 11,680. Central California, this year: Oranges, 1896; lemons, 107; total, 2003. To same date last season: Oranges, 4030; lemons, 159; total, 4189. Northern California, this season: Oranges, 202; last year, 842.

New York: 10 cars. Nav. \$3.70-\$5.25; lem. \$7.20-\$8.85; Tang. ½s \$2.90.

**CAULIFLOWER AND BROCCOLI**  
Continued from Page 300  
the growth of foliage, and the short leaves are not an adequate protection from the sun. Many heads are consequently discolored, much of the flower being creamy to yellow. Many of the heads are not solid.  
Alameda County, which has a more restricted acreage, has had more general irrigation than San Mateo County, and will begin shipping the middle of February.  
Reports from Oregon indicate that broccoli shipments will start somewhat sooner than expected and much earlier than last year. The open winter has been favorable and it is believed that the shipments will be active before March 1.  
The first shipment from the Imperial Valley occurred on February 12. The control of aphids in the valley has been such a difficult task that it is highly improbable that this section will ever become a cauliflower district. The need of Coast fogs and rains is keenly felt and a light crop is expected.

# Be Cold Blooded When You Choose Your Truck —and Choose Now!

As a business farmer, you must have a truck. Don't postpone decision longer. Buy now while you still can get one. Don't wait until only the money-wasting makeshifts are left.

Be just as coldblooded as a traffic expert is in selecting the right truck. Base your choice on the same considerations as he does and you will be right.

This is the way the traffic expert would look on your trucking problem:

1. **Horse Service**—Always unreliable, limiting your scope and delaying you unexpectedly. Under present conditions growing more costly than ever.
2. **Miniature Truck**— $\frac{3}{4}$ -ton; too small for practical conditions, or for your ever-increasing traffic. Costs just as much to run as a good one-ton truck.
3. **Passenger Car**—Adapted into a truck by a makeshift attachment made by a firm that did not make the car. Sure to breed trouble. Hard to keep in condition. Hard to find and cure trouble. Divided responsibility.
4. **3-Ton Truck**—Over-heavy for everyday work. Wasteful unless always used at full load.
5. **Unproved 1-Ton Trucks**—Partly experimental. Not made of highest grade steel. Over-heavy. Uncertain as to service. Costly to operate.

6. **Standardized, Time-Tested Maxwell One-Ton Worm-Drive Truck.** Low first cost. Low operating cost. Complete truck designed wholly as a truck. Made of high-grade automobile steels. An engine which has proved its reliability in years of use on hundreds of thousands of cars under all possible conditions. Worm drive of the same type as on trucks costing \$5,000. Completely enclosed drive, safe against derangement by the worst roads or worst weather.

Get the facts. Write us a letter. The more coldblooded your judgment in choosing your truck, the better we will be pleased.

The new and coming conditions are changing the whole of the transportation experts' judgment as to what truck is most economical in operating costs as well as in first costs.

If you decide in time, you can still get one of these trucks of proved reliability and 100 per cent. efficiency; cash or easy terms.

There is a Maxwell dealer near you. But we have some new information that we want to send you direct. Send us a postal card today.

Case 9-18 Kerosene Tractor

## A Tested Tractor Is Best and Cheapest

Most farmers know that. Most farmers know how costly it is to experiment.

Case has an experience of 76 years in the power-farming field, and this experience has taught us that our policy of selling only tried and true products is right.

Case Kerosene Tractors have been in the process of development for 26 years, and when you buy one you become the owner of a tried and proven tractor. You do not have to experiment.

From official tests, and from records kept by thousands of farmers owning Case Tractors, it is now an established fact that Case Tractors are most economical in the long run. The cost of fuel per acre is low and upkeep at a minimum. We will be glad to furnish you the evidence to prove these facts.

Case Kerosene Tractors come in four sizes: 9-18, 10-20, 12-25 and 20-40. So there is a size for every farm.

We have a very interesting catalog regarding Case Kerosene Tractors which will be sent free upon request. It contains a lot of valuable data in addition to giving you an opportunity to know the leading tractors.

## The Fitting of Bean Land

A Description of Three Systems of Bean Culture Practiced in California, with a Chart Giving the Best Varieties to Plant. Written for California Cultivator.

**T**HERE were about 558,000 acres of field beans in California in 1917 from which was harvested about 4,821,000 centals of beans, worth about \$50,000,000. This crop, the largest ever produced in the state, constituted 44 per cent of the entire dry bean crop of the United States and exceeded by five per cent the combined output of the five next important states, Michigan, New York, Colorado, New Mexico and Arizona. About 65 per cent of the California crop is produced without irrigation of any kind; about 25 per cent is produced on subirrigated land and about ten per cent on surface irrigated land. Each of these types of land requires a different system of bean culture and to some extent determines the variety to plant and the time to plant it.

### Dry Farming System

The majority of the Lima bean acreage of Southern California, nearly all of the Small White and Blue Pod acreage of the central Coast counties, and a considerable part of the Blackeye and Tepary acreage of the interior districts is dry farmed. That is to say the land receives no water other than that which falls as rain during the winter and is stored in the soil for the use of the crop during the summer.

**Fall Plowing:** In order to secure the greatest absorption of rain and reduce to minimum the loss of rain through surface run off, the land should be plowed dry to a depth of 12 or 14 inches as soon as possible after harvest in the fall. In dry districts especially on heavy soils, or on soils not previously worked deeply or on soils underlain by hardpan or impervious subsoils, this deep fall plowing may advantageously be supplemented by subsoiling to a depth of 15 to 18 inches in order to increase the absorptive and storage capacity of the soil.

**Winter Working:** Heavy soils plowed dry will turn up rough and lumpy and should be pulverized and firmed as soon as sufficient rain has fallen to put them in workable condition. The reduction of heavy soils may best be accomplished by the use of a heavy spike tooth roller or "cross kill" but the lighter soils respond as well to a disk or corrugated roller. Throughout the rainy season, the surface of the land, to a depth of about four inches, should be maintained in a loose mellow condition, this for the two-fold purpose of increasing absorption of rain and of reducing losses through surface evaporation. Each rain that is followed by drying weather will result in a running together and crusting of the soil. The crust thus formed should be broken frequently and should never be left until it has become too hard and thick to pulverize smoothly and finely. The most effective implements for this work are the chisel and spring tooth harrow. Either of these may be used on a fairly moist soil

without deleterious effect and either may be adjusted for the shallow working required. The cyclone, or in fact any knife cultivator should not be used for this purpose because by their shearing action in moist soils

Bean Fields with Almost the Expanse of the Ocean  
Pink beans as grown in the Sacramento Valley.

they develop a tempered layer of soil at the depth they run, which prevents the preparation of a fine mellow seed bed later in the season.

**Spring Working:** The last chiseling or spring tooting should be done as soon as possible, without puddling the soil, after the last rain of the season, and should be as shallow as possible, not exceeding three inches in depth. From then until planting time there are but two objects to attain, first the destruction of weeds of every description, and second, the continuous maintenance of the soil moisture near the surface without loss. Two implements are indispensable for this work, the "cyclone" (Ventura weed cutter), and the corrugated roller, the first to destroy weeds and maintain a fine shallow mulch, and the latter to pulverize and hold the moisture up. One or both of these implements should be used, under ordinary circumstances, at about ten day intervals, from the time of the last chiseling until the planters are sent into the field.

**Spring Plowing:** Under the above system spring plowing is unnecessary, and even undesirable, and should not be done unless a neglect of the winter and spring work makes it necessary as a means of turning under weeds and preparing the soil for planting. If done it should precede planting by at least six weeks, should not exceed six inches in depth, and should be followed immediately by disking, cross-disking, harrowing, and rolling, in order to obliterate air spaces to the bottom of the furrow and prevent rapid drying of the freshly plowed land.

### Sub-irrigation System

A large part of the reclamation districts of the Sacramento River and the Stockton delta, together with the high water table lands of the San Joaquin Valley are classed as sub-irrigated lands and receive their moisture supply in part from underground sources. The culture of beans in lands of this character is simpler and involves less labor than on lands of the preceding (dry farmed) class. Deep fall plowing soon after harvest should be practiced, because it gives the benefit of a deep seed bed and deep feeding area for the bean roots and yet allows sufficient time for the soil to settle before planting. After this, most of the winter and spring working previously described may be dispensed with, but sufficient cultivation should be done to keep the land clean, make spring plowing unnecessary and leave the land fine, firm and mellow at planting time. The selection of implements and the sequence of operations is far less exacting than in the previous (dry farming) system, and the details of management should be varied to meet the individual requirements of each piece of land.

### Surface Irrigation System

Surface irrigated bean land is the least extensive of the three classes but Continued on Page 326

## Citrus Culture in China

**P. CLAUSEN**, now in charge of the Southern California insectary at Alhambra, and later to be in the trenches, has made report of his investigations in the Orient, and from the report we quote as to citrus culture in China:

The writer's observations upon citrus culture in China cover only the section from Foochow southwards to Canton, though citrus is grown quite extensively in several provinces farther north. It was not possible to secure any accurate data bearing upon the acreage or production in these provinces because such information is not collected by the government or by any other agency. The methods employed in growing this fruit are practically identical with those used several hundred years ago, as no scientific study of the various problems confronting the industry has as yet been undertaken.

### Climate

The climate of the citrus producing sections of China is in general somewhat colder during the winter than that of Southern California and covers a longer period of time. More or less injury to the trees occasionally results from unusually cold weather but is no more frequent than in this state. The summers are extremely hot and the humidity high during the entire season.

### Varieties

There are three varieties of oranges grown throughout China, these being the Ponkwan, or Mandarin, the Suikwan, and the Tankwan. The first named variety is by far the most extensively grown and is an excellent fruit for local consumption. It is very loose skinned, sweet and in general somewhat similar to the Satsuma orange of Japan. The Suikwan is not as sweet as the Ponkwan, but has a much tighter skin, which gives it better shipping qualities. The third variety, the Tankwan, is probably a hybrid of the two first named varieties. It is rather small and with a medium thick skin, and has much the flavour of the tangerine, which it somewhat resembles.

Two varieties of pomelo are grown in the south China section, particularly in the vicinity of Amoy and Swatow. The Matabuntan, or white pomelo, is the best, and is more extensively grown than the Toyu, or red variety. The fruits in both cases have a very heavy skin, often one-half inch in thickness, and are very large. A number of fruits in the local market were weighed, and averaged nearly six pounds. The flavor is excellent and quite distinct from that of the California or Japanese varieties. In serving, the skin is first removed and then the tough membrane surrounding each section is taken off, after which portions of the sections may be easily removed without breaking the cells.

A considerable proportion of the fruit produced is sold in the local

market, the value ordinarily being from six to eight cents each. The fruits are divided and sold in sections rather than as a whole. Large quantities are also exported to various ports on the China coast, usually being transported in bulk by sailing vessels. Often it is necessary to carry the fruit long distances overland, and this is done by native carriers, or coolies, each of whom carries two large baskets on the ends of a pole slung over the shoulder. A single coolie will often carry a load of 200 pounds in this way 20 or 30 miles per day.

### Cultural Methods

The cultural methods employed in China depend largely upon the section in which the trees are grown. In the Foochow district oranges are produced almost exclusively upon the level areas among, or adjacent to, the rice paddies. Inasmuch as these are constantly flooded it is necessary to adopt some means of drawing off the surplus water from the surface soil. As a grove usually comprises only about 75 to 100 trees, this is accomplished by making a large excavation in the center of the grove, this usually measuring nearly 100 feet in width and about ten feet in depth. The water which accumulates in this reservoir is pumped out from time to time into the adjoining rice paddies. In addition to the above means of eliminating surplus water, the trees when first set out are planted upon mounds about two feet in height. As the trees become older these mounds are increased in size, so that when mature the trees are upon mounds five or six feet high. It can not be said, however, that this practice is satisfactory, as the groves observed were invariably in very poor physical condition and of low producing power. Naturally the quality of the fruit was very poor.

The pomelo is largely grown in the river section above Amoy and Swatow, and the methods of culture employed are quite different from those used in the orange producing sections farther north. The level lands adjacent to the rivers are devoted almost exclusively to the production of this and other fruits. In these groves clean culture is invariably practiced. The trees were found to be large, heavy bearing and in excellent physical condition, and many of these groves would compare favorably with any found in California.

### Pest Control

The insect pests of citrus are not nearly so numerous or destructive as in Japan and it is very seldom that an infestation becomes bad enough to cause injury. One exception to this, however, is a large Cerambycid borer, which does very extensive injury in all sections. The larvae bore into the trunk and larger branches and often girdle the tree, eventually killing it. Control, when undertaken, is by cutting out the larvae with a knife or chisel.

## The Fig and Its Culture

Chas. F. Collins, Horticultural Commissioner of Tulare County, Gives Method of Growing and Cultivation.

**D**O YOU know a child that does not like figs? Did you ever notice that the appetite for this delicious fruit usually remains and often grows stronger with the age of the individual. Why should this not be the case when we consider that this is one of

the most nutritious, palatable and healthful foods known?

While it enjoys the distinction of being the first fruit mentioned in sacred history, it seems reasonable to suppose that the fig tree at that time must have possessed different characteristics from those of the present

date or the leaves would have made decidedly uncomfortable underclothing for our ancestors.

While there are over 200 varieties of cultivated figs, but four are of commercial importance in this state, namely; the Smyrna, Adriatic, Kadota and Mission.

Many people wonder how the fig produces fruit without flowers, as there is no outward appearance of bloom. The fact is, there are hundreds of flowers inside of each fig. The Smyrna fig, if not fertilized by pollen from the wild fig, will not mature, but dry up and drop before half grown. This can be accomplished only through the agency of a minute fly, known as the fig wasp or blastophaga grossorum, which lives over winter in the larval form in the Capri or wild fig, which, by a wise provision of nature hangs on the tree all winter in a partly developed state. With the advent of spring the figs and tiny wasps mature and in early June begin emerging from their winter home covered with pollen with which to fertilize the Smyrna figs. A single wild fig sometimes contains several hundred of these wasps.

The Smyrna figs are receptive at the time the blastophaga matures and are fertilized as follows; the Capri figs when mature are picked and hung in the Smyrna trees from ten to 50 in each tree, according to size of trees, when the wasps emerge and enter the Smyrna figs, carrying the fertilizing pollen. About one Capri tree is required for every 25 Smyrna trees. Certain figs of the Adriatic type mature their fruit in an imperfect manner, the seeds being barren.

At the present time, the Adriatic is far the most extensively grown in this state, but since its introduction the Smyrna is fast gaining ground and promises in time to outrival all other varieties as a dried product while the Kadota seems to possess many admirable qualities for green shipment, among which are a tough skin, a self-sealing aperture preventing the entrance of insects and freedom from souring or splitting so common with most figs during the latter part of the season.

Although the character of the soil and moisture conditions are factors to be considered in fig growing in the San Joaquin Valley the real secret of success in this as in any other business lies in the individual himself.

Owing to the fact that the United States imports twice as many figs as she produces and the area of production is limited by climatic conditions to certain portions of the interior valleys of California and small areas in Arizona and New Mexico and considering the value of this fruit as a food, its popularity as a confection and its remarkable keeping qualities when dried, it would seem natural to predict that the bugbear of over-production which so frequently prowls in the vicinity of many other branches of the fruit industry, will never molest the grower of figs.

As to the most profitable variety to plant, each has its advocates and at present all are profitable. The Adriatic will no doubt stand most neglect while the Smyrna is preeminent in flavor and sugar content. The Mission, though still a favorite with many for home use is gradually losing favor as a commercial variety because of its lack of saccharin matter and low market value, the trade seeming to prefer a white fig.

The fig tree will endure about the same degree of cold as the olive or a minimum of about 14 degrees for ma-

OUR climatic conditions cannot be excelled for the production of well matured trees. The long growing season allows the trees to mature naturally, so that at digging time the wood is hardened up and in prime condition for handling.

We exercise great care in the proper selection of seedling stocks, cutting our buds from record-breaking orchards, scientifically budding the seedlings and giving the young trees the best care and cultivation in order to produce trees that are merchantable.

By personal acquaintance and good words of our friends, we have secured an increased volume of business each year.

ture trees, if not long continued. It is less exacting in its soil requirements than in climatic and will thrive upon a wider range of soils

A million dollars' worth of damage each year — that's what the pear thrips is capable of doing to the fruit industry of California. Because of the minute size of the insect—the rapidity of its spread over large areas and the suddenness of attack in great numbers—the control of this pest has always been a serious problem.

We have conclusive proof, however, that it can be controlled by thoroughly spraying with

## Miscible Oil No. 2--For Thrips

This is a high gravity oil—specially prepared for this purpose—where great penetration and quick evaporation are necessary.

Miscible Oil No. 2 is a Universal Brand Spray. That means that it is uniform—that it is made from the best materials—and that its manufacture is supervised by chemists and entomologists who have had both laboratory and field experience.

Miscible Oil No. 2 will kill pear thrips in the bud better than any other spray—there is no question about it. Order your spray now.

If you will write our entomologist, Paul R. Jones—acknowledged an expert in the control of pear thrips—he will be glad to help you to decide your individual spraying problems. This expert advice is free. Write today.

INSECTICIDE DEPARTMENT

816 Higgins Bldg., Los Angeles

than any other fruit tree though the size and quality of the fruit is considerably affected by the character of the land upon which it is grown. It is generally conceded that the best Smyrnas are grown on the heavier types of soil. Less water is required by the fig than other fruit trees and an over supply or irregular irrigation will cause splitting and souring in most varieties.

The fig is propagated very readily from cuttings which should be made from stocky, short-jointed shoots of well matured wood of the previous season's growth and about eight to ten inches in length and should be

planted with but one bud above ground. With good care they will be ready to transplant the following year though many prefer two years in the nursery. In transplanting, great care should be taken in protecting the roots from exposure to the sun, as they dry out more quickly than most fruit trees and the young trees should be protected from sunburn during the first summer in the orchard.

The distance for planting should be gauged by the nature of the tree. Probably a distance of 35 feet each way is sufficient for the Smyrna while the Adriatic should not be closer than 40 feet and the Mission needs still more room.

Interplanting with some trees of smaller growth to be uprooted when large enough to crowd may be practiced, or still better, intercropping with annual crops, which, if water supply is ample and followed by good cultivation will not result in any injury to the growing trees.

The most interesting fig tree it has ever been my good fortune to see is on the General Bidwell ranch adjoining the city of Chico. It is a black fig planted in 1856 and measures 11 feet in circumference, one foot above the ground. The ends of the drooping branches have taken root in a circle around it, forming an enclosure 150 feet in diameter. It bears regularly and produces a crop in proportion to the size of the tree.

Generally speaking up to the present time the fig tree has not suffered from insect pests or diseases. Some trouble has been experienced with nematodes in sandy soil and gophers are known to be born with, or acquire very early in life, an abnormal appetite for its roots. It is highly resistant to crown gall and oak fungus, which cause such serious losses in many of our deciduous orchards.

But little pruning is required and this should consist almost entirely in removing whole branches where they are too thick.

Young trees must not be kept growing too late in the season but moisture should be withheld and the wood allowed to mature, otherwise the early winter frosts will injure them severely. This is a very important

consideration in the growing of figs.

Only the future itself will reveal what the future will bring forth and those in the best position to judge may be wrong as to what the future generation will require in the horticultural line, but it has been the opinion of the writer for several years past, that all things considered, there is no brighter future for any fruit in this state than the fig. It is a most delicious and valuable food, fresh, dried, canned, preserved, pickled, converted into innumerable sorts of confections and the demand for good fig products is growing rapidly in all parts of the world. The demand for any fruit will fix a fair price for it to the grower. If it does not, it is up to the grower to see that it does and experience has taught him how to bring this about.

No fruit grown is so easy to harvest and prepare for market. There is a very limited territory suitable for its production and the supply does not equal one-third of the present demand. With organization of the growers, standardization of the product, proper advertising and plenty of figs, the demand could be enormously increased, greatly to the advantage of both the producer and consumer.

### THE FITTING OF BEAN LAND

Continued from Page 323

is generally distributed in all of the bean districts and is of ever increasing importance to the industry. Since the moisture supply of these lands is controlled at will the management is very simple and, other things being equal, the probability of failure is least. Such land should be plowed as far in advance as possible of planting, six to eight weeks being none too long an interval. If flood water is available, winter irrigation is desirable, but where pumping is practiced a more economical use of the water may be made by irrigating later in the spring. When necessary to irrigate, before plowing the land may either be checked or furrowed for the reception of the water. Checking is preferred on irregular contours and heavy soils, while furrowing is more satisfactory on lighter, level lands. Irrigation after planting must be done between the rows, and the land must be level enough to control the water in furrows. Flooding, as as practiced in beet culture, would result in scalding and prove fatal to most bean varieties. There is no particular stage of plant development at which water should be applied, but it should be the aim rather to keep the soil continuously moist about the roots of the plants until a good set of pods has been secured. On soils of medium texture, one three-inch irrigation before and two after planting will suffice. After each application the land should be cultivated and hand hoed to prevent the crusting of the soil about the crowns and roots of the plants.

### CIVIL SERVICE EXAMINATIONS

California State Civil Service Commission announces examination for positions in state employ to take place at Sacramento, San Francisco and Los Angeles, during 1918. Three positions of agricultural interest may be open and applications for privilege of taking the examination should be filed prior to April 1 and October 1. The examinations will be for dairyman, monthly rate of pay being \$40 to \$125; landscape gardener, head and assistant, \$60 to \$90; poultryman, head and assistant, \$40 to \$75. Application blanks may be secured from Room 331, Forum Building, Sacramento; Room 10, Ferry Building, San Francisco; Room 1007, Hall of Records, Los Angeles.

## The "California Special" Plants Every Variety of Beans Including Horse Beans

Make sure of a good stand of beans on your valuable bean land, by using the thoroughly dependable "California Special" Bean Planter.

Each planter is equipped with a set of rotary droppers adjustable to plant any variety of beans from small white to large limas. This is the best and most dependable dropping device known for planting beans. The dropper rotates without friction through the hopper cupping the seed as delicately as though each were

acted by hand. The seed passes from dropper to boot which runs at any depth set. Shoe runners will be furnished where desired. Each boot is hinged with wooden peg. Open wheels run back of boot. These press inward and downward around the seed but do not pack the ground directly on top. The California Special is the last word in bean planting machinery. The frame is especially strong—is made low for orchard work if desired and is so evenly balanced and adjusted as to make it easy to handle. Made in 2, 4, 6 and 8 row sizes.

This planter will save the price of itself in not injuring the seed bean during the process of planting.

**Ventura Manufacturing & Implement Co.**  
Ventura, Cal.

Rotary dropping device insures uniform planting. It cannot injure any of the seed.

Catalogue and circulars sent on request. We make a complete line of bean and beet tools.

## AVOCADOS IN GUATEMALA

Fruit growers of Southern California gathered at Riverside on Friday, March 8, and listened to address by Wilson Popenoe, explorer for the United States department of agriculture, who has spent nearly a year and a half in Guatemala investigating as to methods of growing and handling this fruit. The lecture followed a banquet tendered Mr. Popenoe. A. D. Shamel acted as toastmaster and introduced the speaker as a man who had eaten 5000 avocados in 16 months time. Regarding this announcement the Riverside Press says:

"The announcement was a startling one to the audience, accustomed to think of avocados in terms of \$1.00 per." All this happened in Guatemala, however, and there the price is from 25 to 35 cents per hundred. Mr. Popenoe did not deny the avocado story, but modified it to the extent of saying that in many cases he simply sampled the fruit. He showed some pictures of avocados as big as melons, and the thought of a man getting away with ten of these in a day was pretty startling."

Members of the Avocado Association held a business session at Riverside, and it was decided to hold the annual convention in Los Angeles, May 15 and 16.

## ETERNAL VIGILANCE

Commissioner Hecke is appealing to the various county commissioners to use the utmost diligence in intercepting any contraband shipments of plants or fruits into California from sections infested with citrus canker or any similar deadly disease. He reports that Commissioner Lamiman of Shasta County has learned of an unintentional violation of the law which might have meant much to California fruit growing interests. Mr. Lamiman writes:

"Today I took a parcel post package which had been delivered at the Redding post office, containing six Florida grapefruit. An accident was all that made the development as the lady who had received them was proudly showing them to us in the office. On making inquiry I found they had been sent through the mail from Florida, and there was no marking on the package to designate what was in the package. It seems to me there is a loophole there whereby the citrus canker might be introduced into California. This might have happened in a citrus section as well as with us here. The fruits were readily given up when a few minutes' explanation of the dread disease was given."

## THE MANUAL OF CULTIVATED PLANTS

Liberty H. Bailey is always producing some book which gives to farmers quick information. He is editor of "The Cyclopaedia of American Agriculture," "The Standard Cyclopaedia of Horticulture," and almost numberless other helpful books. It is not yet officially announced, but we are told that a book now under contemplation is "The Manual of Cultivated Plants." This manual will be a list of useful plants now contained in "The Standard Cyclopaedia of Horticulture," but it will not contain reference to some 17,000 or 18,000 other plants which are of interest to botanists.

For example, of the hickories, only the pecan should go in. Others may be transferred to grounds or possibly grown as a timber tree, but are not classed as cultivated plants. By this means the 20,000 species described in the cyclopaedia will be reduced to less than 3000. No announcement is yet made as to when this manual will be published.

## NATIONAL QUARANTINE

The country has finally waked up, and Senate Bill 3344 to prohibit the importation of nursery stock into the United States in order to prevent the introduction of insect pests and plant diseases is a step in the right direction. The bill provides that it shall be unlawful for any person to import or offer for entry into the United States any nursery stock: provided, however, that the secretary of agriculture may import, grow, and propa-

gate such nursery stock for experimental and scientific purposes, which, after holding in quarantine a length of time sufficient to establish its freedom from insect pests and plant diseases, he may distribute upon such conditions and under such regulations as he may devise. Also that the secretary of agriculture shall provide for the inspection, fumigation, detention and propagation of all plant materials imported by him and shall devise such rules and regulations as may be necessary for carrying out the purposes of this act.

## DEFOLIATE CITRUS TREES

Commissioner Collins of Tulare is requiring this year as usual the defoliation and dipping in rosin wash of all citrus stock before entering Tulare County. He states that he believes this to be the most practical method of protecting the citrus growers, for past experience has shown that it is not practical to inspect citrus stock in foliage.

A large acreage of rice will be planted in the Oakdale section.

**Olive Trees**  
such as these are grown only on our foot-hill locations. ~ Note the good roots ~ for hardiness they have no equal.

We have a fine lot of Mission and Manzanillo trees, both on Picholine roots and grown from cuttings. We have had splendid success on all Olive plantings—a most important assurance to you.

Submit a list of your tree wants for special quotation. Do it right now.

We have also a complete assortment of Shipping Plums, Cherries, Prunes, Bartlett Pears, Fall Pears, Peaches, Almonds, Apricots, Walnuts, etc.

Our foot-hill grown trees are free from root diseases common to other localities. Our trees insure your future profits in fruit growing.

And remember—we will accept Liberty Bonds as full or part payment for trees. Write us today.

## Books that Help You Get the Big Money for Your Hay

Increase your hay land profits. Get more and better hay from the same land. These books tell you how. They contain valuable information on varieties of hay, hay seeding, hay culture, hay making and modern haying machinery. Authoritative information based on years of actual field experience and exhaustive tests. They tell all about the

## JOHN DEERE DAIN SYSTEM of Air Curing Hay

The system that is being practiced profitably by thousands of hay growers. Hay made by this system brings better prices. There is often a difference of from \$6.00 to \$10.00 per ton between choice and ordinary hay. Hay made the Dain way keeps better, is more palatable, more digestible and has greater feeding value.

This system consists of following the mower closely with a Dain System Rake, handling the hay while the leaves are still active and placing it on clean, dried-out stubble. The hay is delivered in medium sized windrows with the bulk of the leaves on the inside and the majority of stems on the outside.

The loose windrows allow for free circulation of air. The hay retains its color and nutrition.

The Dain System Rake is easy to operate. You put the machine in and out of gear, raise and lower the raking head, change the angle of the teeth with levers accessible from the seat. Unusual capacity is provided. The inclined frame grows higher where the windrow becomes larger—an exclusive feature. Many other splendid features of this rake are illustrated and described in the free books.

To get these books state the implements in which you are interested and ask for free package DS-44.

JOHN DEERE, Moline, Ill.

# SPRAY

Potatoes, Peas,  
Beans, Tomatoes,  
Celery and Pickles

with The OSPRAYMO  
**RED JACKET**

Awarded the medal at San Francisco 1915. (Illustrated below)

- Tank:** Choice of 70 or 100 gallons.
- Platform:** Maple, extremely rigid construction.
- Pump:** Latest crank pattern. Vertical bronze plungers outside packed.
- Agitator:** Automatically keeps liquid in solution and cleans Suction Strainers; no clogging.
- Wheels:** Rugged Oak, 3 in. tires, 50 in. diameter, adjustable 56 in. to 72 in. apart on unusually heavy steel axle.
- Operation:** Entirely automatic—may be operated by a "twelve-year-old."

Nowhere in the Spraying industry can you find greater value for your money. The Red Jacket is backed by the strongest kind of a guarantee.

No matter what your requirements, you will find in the OSPRAYMO LINE a sprayer for very need. 36 years of experience are at your service. The Ospraymo Line is nationally known and nationally recommended.

Write for free Catalog. Ten cents brings our handsome book, "The Why and How of Orchard Success," a complete spraying calendar.

## Tractors on Small Farms

Written for California Cultivator By W. H. Helleman, Farm Adviser  
Glenn County

IN MEETING the general war situation as it concerns production, perhaps the Glenn County farmer is getting as good results and has worked out as practical lines of effort as may be found generally. Especially in matters relating to land preparation and the cultivation of maximum acreage per farmer there have been practical plans worked out which are worthy of mention.

The farm adviser of the county, as a member of the county committee on resources of food supply, has endeavored to make general labor and production surveys, and has given attention to the tractor equipment, the distribution of tractor power in the county, and the encouragement of custom work by men with tractors not kept fully busy on their own holdings. Naturally much of the investigation made has received the cooperation of the farm bureau organization of the county, and it is through this organization that satisfactory results have been obtained.

In passing it is worthy of note however, that the activity of the farmer is not limited by the mere program of the farm bureau organization as a whole, but the habit of cooperation has led to individual action by the farmer, or the group of farmers, for getting results.

Tractor farming has recently received much attention. In 1916 there were perhaps 80 tractors in the county and in 1917 the number increased to about 130. Tractor equipment, it may be noted, did not develop alone among the large grain and rice holdings of the county, but has steadily increased among the smaller land owners. The survey of the tractor equipment of the county and the inquiry regarding custom work with tractors has apparently encouraged the acquirement of these tools to be used very largely by owners for outside work. It has become a common practice for the larger and smaller outfits to do work for the outside neighbor who, to the present, has turned his land with horses and mulepower.

A recent visit to the Jacinto and Bayliss districts of the county was a revelation. Tractor gang plows were at work in every direction. Over a distance of about six square miles one could not get beyond the machine gun patter of the small and large exhaust, while the ammunition for the disturbance was scattered over the landscape in cast iron rimmed barrels.

The district in question is one of small farms. Seldom is the holding for the individual more than 40 acres, and the fields are relatively small, and yet, in an entire half day's traveling and visiting with an auto, only two farmers were found in their fields with plows drawn by horses, the remainder of the work being done with tractors.

The general common remark made by the farmer was; "Sure, it's the system, and I wish we had more of them around. These tractors do a good job. They do it rapidly and we can get on and finish our winter and spring plowing."

A visit made to a large Yuba just being limbered up for a life of activity led the owner to remark; "Yes, I got three. The boys are out with them. The bigger, the better." Another visit to a 25 acre field where a new Jumbo Best was whopping things around permitted the owner to say they owned four tractors and had more work than they could do.

The going charge for custom plowing with engines is \$2.50 per acre. The farmer engages his work done and awaits his turn.

The 25 acre field which requires 12 long days of team labor to plow is, under the new system, turned under in a few hours. The tractor man pulls out and goes to the next job without so much as stopping to talk over even the local news with the farmer or his pleasant faced wife.

It is the system. It is an innovation. It is winning the fight for democracy. With the land preparation out of the way, the farmer swings in with his harrows and seeders. He completes the job. He works down the rough land preparatory for a later crop of grain sorghum. He farms more acres lone handed. He works less hard to get equal results. His time is worth more these days than the cost of tractor plowing entails.

If all the tractor owners in every county in the state would skirmish about and aid the smaller land owner who does not own such equipment, production in the state would double. If the idle time of the tractors owned by large operators who think they must have a section of land to turn around upon were drafted into service, the resulting harvest would be bountiful indeed. Idle lands and idle tractors are pretty much due to selfishness and a lack of the realization of patriotic duty.

## Home Made Sugar

Because of present shortage of sugar and uncertainty of future supply we are all interested in finding out how to supplement the factory made product. The department of agriculture is sending out suggestions to those who have maple trees or access to natural "bush" to make all sugar possible this spring; also suggesting planting of sweet sorghums wherever possible as an early October frost reduced the supply of sugar cane for seed cuttings in the South.

But what is of more interest to us here in California is the suggestion that all who can plant a row of sugar beets in the vegetable garden and make syrup. Directions for a simple method of making syrup from sugar beets were given in the Cultivator of June 2, 1917, and so many inquiries

have been received for copies of this number that we are repeating directions here:

Sugar beet syrup may be made by a very simple process, and a few rows in the garden will produce beets enough to give a family all the syrup needed. A bushel of beets will produce from three to five quarts of syrup. As the beets when mature should weigh from one to two pounds each 30 or 40 of them will make a bushel, and as the beets after thinning stand about ten inches apart in rows about 20 inches apart it is easy to determine how much ground to use for sugar beets if a particular quantity of syrup is desired. A few rows in the garden generally will be sufficient.

The beets should be topped by cut-

ting off the crowns at the point of the lowest leaf scar, as the crown contains much of the salts taken up during growth. In making syrup the topped beets are cleaned by soaking a few minutes, then scrubbing with a coarse, stiff brush. The next step is to cut them into slices as thin as one-sixteenth of an inch if possible. A butcher knife may be used, but a kraut cutter or some other slicing device is easier.

The sliced beets are placed in a tight barrel and just enough hot water to cover them—boiling water if possible—is poured in at once. The barrel is then covered with several thicknesses of canvas to hold the heat. The sliced beets are allowed to soak for about 60 minutes. The barrel is agitated from time to time without being uncovered. This process brings out the sugar from the beets. The liquid is then drawn off, strained through several thicknesses of cheesecloth, and placed in a kettle or other vessel, in which it is boiled slowly until it has evaporated down to the thickness desired. It is important that the boiling be slow and the process will take several hours. The work may be done out doors if desired. Care should be taken not to scorch the syrup. The scum which rises to the surface of the liquid is skimmed off, to remove the strong, beetlike flavor.

The syrup is bottled or canned while hot and sealed to prevent molding. It is dark in color, but has a pleasant flavor.

It is also suggested that cull apples be turned into apple syrup.

For a bulletin telling how to make sugars at home, write Office of Sugar Investigations, United States Department Agriculture, Washington, D. C.

INSURING AN EVEN STAND OF POTATOES

Written for California Cultivator  
By Edward C. Hawley

I have now been growing potatoes, two crops a year, for about four years, on a small farm and I have learned one very important thing, that it is necessary to have an even stand of growing vines so that the entire crop shall mature at the same time. A patch of potatoes, some of which begin to mature weeks in advance of others, is an exceedingly expensive crop to harvest; it has to be gone over several times in digging and is so slow that loss is almost certain. Where there is an even stand the crop can be dug in about one-fourth the time.

Experience has taught me that it means just the difference between profit and loss to do the following things preparatory to planting potatoes:

(a) After dipping potatoes give them sufficient time to fully recuperate and become well sprouted before planting. I dip with a solution of corrosive sublimate, two ounces to 15 gallons water, dissolving the chemical in a gallon of boiling water first, and adding to the 14 gallons which should be contained in a wooden receptacle. I have found that quite badly infected potatoes will grow clean tubers if dipped and planted in clean land. It is convenient in dipping to have each sackful of potatoes put in two sacks, tying near top of sacks, thus they are light enough to lift in and out of the barrel, and the sacks being half full and tied at the ends, the potatoes will spread out in the barrel better so that you can easily make the solution cover. Leave in the solution for an hour and a half. Corrosive sublimate weak-

ens the eyes of potatoes so much that you are almost sure to have a very uneven growth if you plant immediately or soon after dipping. I have found that it pays to dip two or three weeks before planting, laying potatoes on the ground about two deep and covering with straw or dry weeds as soon as dry after dip. This starts sprouting; a little water sprinkled over the straw occasionally will help, unless the nights are very cold.

(b) When cutting potatoes sort the more advanced sprouted eyes from the more backward ones and plant each in a patch by themselves. You will get potatoes from one to three weeks earlier from the more sprouted ones than from the others and both patches will make an even growth.

Much has been said lately of planting whole potatoes. I have only planted one crop so am not prepared to criticize except to say that this

crop was much slower maturing and developed much more unevenly than the cut ones, and I did not get any bigger yield.

SPROUTING GIVES EARLIER POTATOES

To speed up the spring potato crop, home gardeners may sprout the seed tubers before planting. This results in quick growth after planting, produces an earlier crop and also a higher yield than is obtained when ordinary dormant seed are planted. The process of sprouting a small quantity of seed tubers is explained by J. T. Rosa, Jr., of the University of Missouri College of Agriculture. The seed should be obtained two or three weeks before planting time. Only sound healthy tubers should be used, but the size makes no difference. These tubers should be spread out in a single layer on the floor of a light

room or on the bottom of a hotbed where they can receive full light. Often a flat or shallow box can be placed in a living room window where a peck or two of seed can be sprouted. Under the influence of the warmth and light the tubers start to grow, turning a dull green and sending out stubby sprouts from the eyes. If the room is too warm or poorly lighted, these sprouts become long and slender. Such sprouts are likely to be broken off in planting, and for this reason are not so desirable as short stubby sprouts.

The seed should be planted when the sprouts are about one-half inch long. Cut the tubers in the usual way, with one sprout on each piece. These should be planted by hand, with the sprout pointed upward. Plants from sprouted seed reach the surface ten days earlier than from dormant seed and grow off rapidly. A better stand is generally secured from sprouted seed, and more tubers are formed on each plant.

PAIGE  
The Most Beautiful Car in America

Make The Minutes Count

In these war days you must realize that it becomes a patriotic duty to own a motor car.

The business of the nation must move forward on high gear. There must be no "let ups"—no wasted effort—no inefficiency. Every true American is expected to quicken his stride and make each minute a productive minute.

On the farm, especially—where distances are great—a dependable motor car is quite as necessary as the telephone. It is the most efficient form of transportation that has ever been developed—and transportation is the key to our entire national problem.

So, by all means, get a motor car—for yourself and Uncle Sam. Any car is better than a slow, plodding, horse-drawn vehicle, but common sense will dictate the wisdom of buying a good one while you are about it.

Take up the matter in the same careful way that you select agricultural machinery. Look for enduring quality rather than mere price. Buy a manufacturer's reputation rather than four wheels and a painted body.

If you make your selection on this basis, we are quite content to abide by the result. If you search for motor car quality you must find the Paige.

### OUR ADVERTISERS RELIABLE

We guarantee our subscribers against  
loss through dishonesty of any adver-  
tisers in the Cultivator. We do not at-  
tempt, however, to adjust trifling differ-  
ences between subscribers and honest,  
responsible advertisers, nor will we pay  
the debts of honest bankrupts. Notice  
of complaint must be sent us within 30  
days from date of the transaction, and  
the subscribers must have mentioned the  
Cultivator when writing the advertiser.

### THIS WEEK'S COVER

California beats every other  
state in the Union in bean production.  
In fact, we may almost say that she  
beats all other states of the Union  
combined, for in bean production she  
splits with the rest of the nation close  
up to the fifty-fifty basis. Last year's  
production has not yet been sold en-  
tirely, but enough has been sold to as-  
sure a return of somewhere between  
\$40,000,000 and \$50,000,000. The  
planting the coming year will presum-  
ably be greater than ever, and this  
week's paper gives a fund of infor-  
mation regarding varieties, location,  
planting and will be followed another  
week with more particulars as to  
planting-to-harvesting practices. The  
illustration on the cover shows one  
phase of California's bean industry  
up in Lima land.

### INCOME TAX

Those of us who were slow in  
making income tax return have been  
given extension of time till March 31,  
nearly two weeks away—but a hint to  
the wise. That's all.

### THE SUN IS SHINING

The sun is shining, but didn't  
it rain gloriously? Some sections of  
California received around six inches  
for this one storm and seasonal pre-  
cipitation has been brought up to  
normal in nearly all sections of the  
state. The ground is filled and  
streams are running bank full. The  
greater portions of the Sacramento  
and San Joaquin Valleys received  
close to two inches; Santa Clara Val-  
ley, two and a half; northern Coast  
counties, around two and a half; San  
Luis Obispo County, nearly three in-  
ches; Los Angeles County shows var-  
iation of from two inches at the har-  
bor to nearly six inches near the foot-

hills; other Southern California  
points, between one and four inches—  
this of course, excepting Imperial  
Valley and other desert sections,  
which received only a trace.

Coming at this period of the season  
every drop will be conserved, and  
California is assured a great produc-  
ing year.

### LIBERTY LOAN

The third liberty loan will soon  
be offered to the people. In fact, at  
present the preliminary step, the pur-  
chase of treasury certificates, is un-  
der way. As these certificates are  
drawing four and a half per cent  
many are guessing that the new bond  
offer may carry the same rate, but  
whatever it carries a loyal people will  
rise as one man and take up the en-  
tire offer. Meantime, buy W. S. S.

### SAVING LABOR

The urge of patriotism has  
been worked upon all of us who are  
farming until we are crying for rest,  
and meantime doing our best in pro-

power churn, washers, and number-  
less other modern appliances which  
are saving steps and backaches. Even  
the steps of the old horse are saved  
and gas takes the family to church  
while the horse rests for more vigor-  
ous work on Monday. The milking  
machine has perhaps had the hardest  
fight of any of these appliances. It is  
making good. Our news items have  
often chronicled the fact that large  
dairies are installing these great la-  
bor savers more and more.

### TOO MANY COOKS

"This year moulting hens were  
late in commencing to lay, nearly Feb-  
ruary, whereas before, early in Jan-  
uary feed jumped from \$3.25 to \$3.60  
to \$3.75 for milo, just as hens got  
busy. Last Friday eggs dropped ten  
cents per dozen! Now the govern-  
ment says; "Keep your hens whether  
they lay or not." We have always  
culled non-layers out in April, May  
and June in order to get better stock,  
and now we must keep these board-  
ers and cut down the supply of feed.  
"This is a swat from three sides;  
feed man, egg merchant and Uncle  
Sam. Who wants to produce more

### \$300 CASH PRIZES OF CALIFORNIA CULTIVATOR

Cow-Testing Association prizes offered in the California State Dairy  
Cow Competition by California Cultivator for the highest production of  
butterfat for one year by herds belonging to a Cow-Testing Association,  
three prizes of \$100 each for herd of ten to 25 cows, 26 to 50 cows, over  
50 cows.

Humboldt County was the first county in the state to form cow-test-  
ing associations. Greater proof of the worth of those associations could  
hardly be made than in the fact that every California Cultivator prize  
winner is in Humboldt County.

Imperial County, hundreds of miles to the south, with the biggest of  
all cow-testing associations, likewise makes a great showing. Note the  
figures given are for fat while butter produced would be 16 per cent ad-  
ded to figures given.

Owner	No. Cows in Herd	Ave. Production Milk	Butterfat
10 to 25 Cows			
1. J. W. Coppini, Ferndale*	22	8,979.0	510.09
2. Floyd Beebe, Esparto	18	9,470.1	387.56
3. C. Darnell, Brawley	10	10,813.7	362.78
26 to 50 Cows			
1. Iver Iversen, Arcata*	37	10,445.0	498.73
2. G. E. Trigg, Ferndale	35	8,653.8	485.96
3. Aux Ambort, Holtville	29	9,134.7	357.39
Over 50 Cows			
1. W. Terkelsen, Ferndale*	53	8,445.1	420.46
2. Coppini & Coppini, Ferndale	60	7,600.0	379.44
3. John Hansen, Loleta	101	6,635.5	339.63

\*Awarded prizes of check of \$100 each by Cultivator Publishing Company.

duction of the food which the world  
needs to secure the money which we  
all need. We have discussed produc-  
ing more on greater acreage and pro-  
ducing more on the same acreage; al-  
so fertilization, cultivation, irriga-  
tion and conservation, and of especial  
interest has been the discussion of  
labor. We want the Chinaman, the  
Jap, the Hindu, and especially the  
good full blooded American, but the  
solution is not yet excepting on the  
part of a very few who have large  
families or live in a neighborhood  
where labor is well balanced.

We have repeatedly referred to one  
of the greatest aids in the present  
situation being labor saving appli-  
ances, and many a farmer has been  
saved from inconvenience and loss be-  
cause of a determination to save ev-  
ery step possible. It costs money to  
install machinery and improved im-  
plements. It costs more to pay for  
labor, and too often money paid for  
labor is gone forever. Money paid for  
improved machinery is, less reason-  
able wear and tear, still well in-  
vested.

And because of these facts farm-  
ers are buying tractors, plows with  
automatic loaders, hay cutters which  
permit of pneumatic "mowing away,"  
milking machines, and even the  
homes are given a water system,

chicks with this kind of an outlook?  
Is not the government defeating the  
very thing it wants to propagate?  
Can't we have some help our way in  
regard to control favorable to us on  
feed costs and minimum egg prices,  
just a fair deal so we can keep our  
equipment going—to capacity—if pos-  
sible and let us then produce enough  
so the government does not have to  
dictate to us. Make the first two  
items reasonable and no hens or pul-  
lets will go to the killing block."

Unfortunately, about the most we  
can do for the poultryman at this mo-  
ment is to offer condolence. It seems  
to be almost impossible to work out  
exact justice for all, and the govern-  
ment—which means all of us—has  
taken a wonderfully big contract, not  
so much in fighting as in its other en-  
deavor to feed the world. It does  
seem to us, however, that there might  
have been less confusion in this mat-  
ter of feeds. We have today been  
ringing the larger dealers in poultry  
and other feeds as to the present sit-  
uation, and all we can learn is; "All  
quotations on all kinds of feeds are  
absolutely withdrawn." The govern-  
ment will permit of no profiteering,  
and until dealers can learn the mean-  
ing of the later rulings, which are in  
effect that only a certain per cent  
above actual cost may be charged,  
confusion in prices will obtain.

Regarding "swatting" the boarder  
hen, it is possible that for the time  
being literal following of an unwise  
rule may be necessary, but surely it  
is a purely unpatriotic act to keep an  
unpatriotic animal eating its head off  
and eating feed which is needed for  
the real producer. Our correspon-

dent is, however, under a misappre-  
hension as to the duration of the  
present order prohibiting marketing  
of laying hens. It is in effect only un-  
til April 30 which will not interfere  
with his culling program.

### This Week's War News

The American secretary of war,  
Newton D. Baker, with staff, is in  
France.

The Texas legislature has passed  
a law making a ten-mile dry zone  
about all shipyards.

The Italian line remains quiet,  
though there have been several air at-  
tacks by the Teutons, one on Naples.

Airplane raids on both London and  
Paris have occurred during the past  
week, and several non-combatants  
have been killed.

The Texas state legislature appro-  
priated \$10,000,000 as a war measure  
to purchase seed for drouth stricken  
portions of the state.

Two Americans, Mrs. Ford, author  
of "Keep the Home Fires Burning,"  
and her son, were victims of the last  
airplane raid on London.

General Allenby is advancing his  
line in Palestine nearly every day,  
and the Turks in Mesopotamia are re-  
ported in retreat at all points.

Ambassador Francis is reported as  
safe at Vologda. The Russian As-  
sembly still refuses to endorse the  
Bolshevik peace, and the German  
army is still advancing.

The menace of U-boats is still fur-  
ther decreased, and while no an-  
nouncements are being made it is to  
be presumed that the sub chasers and  
torpedo boats are getting in their  
work.

Twenty thousand men in review at  
Camp Kearney was an inspiring sight  
last Saturday. Thousands of people  
from all the Southwest gathered and  
freely praised the troops because of  
their soldierlike bearing.

The second draft has not yet been  
made, but it is announced that it will  
be for about 800,000 troops and the  
call will be made so as to bring the  
new men into the training camps as  
rapidly as they are emptied by troops  
going to France.

Washington is withholding an-  
nouncements of American casualties,  
but it is known that there have been  
many within the past week. Ameri-  
can troops advanced nearly a half  
mile through the German lines in Lor-  
raine. French officers give highest  
praise to American troops because of  
fighting qualities.

The situation in Russia continues  
practically the same "only more so."  
Rumor still persists in connecting  
Japan and China with the Siberian  
situation and with the claim that  
President Wilson still withholds his  
approval of an advance from the east,  
but Japan is mobilizing and China has  
made appropriation to equip an army  
to advance from the south, but this  
with the approval of Russians friend-  
ly to the Allies, who are in Siberia.

On the western front artillery ac-  
tion has increased in fury, and Bel-  
gians and English on the northern  
end of the line, and Americans and  
French on the southern end have  
made material advances. The larger  
and general drive is yet in anticipa-  
tion. American airships are arriving,  
and it is reported that great damage  
has been caused by successful bomb-  
ing expeditions which have destroyed  
much of enemy munitions in depots  
and railway centers near Valenciennes  
and Cambrai.

# Agricultural News Notes of the Pacific Coast

## Northern California

The big dam at Paradise, Butte County is now completed.

Placer County grain acreage has been increased by over 3000.

Eldorado County has planted over 15,000 deciduous trees this season.

Butte County farm bureau has nine farm centers with a total membership of 500.

A new industry has been started at San Francisco. It is the manufacture of fish sausage.

Farm Management Demonstrator Nathan is in Napa County aiding Farm Adviser Baade.

Legality of Reclamation District No. 833 comprising 40,000 acres near Gridley, is to be tested in the courts.

Farm Adviser Geo. E. Merrill of Sonoma County, recently made address before the farm center at Cloverdale.

One of the largest dairies in the state, with 325 cows, has been located at Brentwood, Contra Costa County.

Madeline Plains irrigation district has been formed in Lassen County. The county hopes to secure a sugar factory.

Grain farmers of Glenn and Colusa Counties hope to effect a saving of thousands of dollars by bulk grain shipments.

Joseph Painter of Denver is in San Francisco conferring with livestock men as to great annual San Francisco livestock show.

Sonoma County's board of supervisors have passed an ordinance granting a bounty of \$20 on coyote scalps and \$2.50 on wild cats.

All creameries of the Ferndale, Humboldt County section, touched high water mark in prices for January. The average was 57 cents.

Butte County finds plenty of lime rock within her own borders and it is urged that they should be used where needed in correcting soil conditions.

Prospective settlers are visiting the lands of the new state land colony in Butte County. Application for these lands are already far in excess of possibilities of delivery.

The Cow-Head Lake irrigation district in northwestern Modoc County has been formed, and it is planned to reclaim thousands of acres which have heretofore given uncertain dry farming crops.

## Central California

Eight cents is the present price on California pink beans.

A rally of the Grange Patrons of Husbandry was recently held at San Jose.

United States army officers were in Porterville buying cavalry horses and wheel mules the first of March.

Emperors and a few Almerias, shipped in Redwood sawdust in drums last fall have made very satisfactory returns.

Madera County livestock men are buying Nevada hay at \$27.50 per ton. Local hay cannot be had for less than \$30, or \$35.

An all day session of the Santa Clara County, Pomona Grange, will be held this week Saturday in connection with Lincoln Grange.

The rulings of the state game commission have been modified so as to permit the killing of wild geese in grain fields about Tulare Lake.

Fruit growers of Santa Clara Valley are working out plans for enlisting 700 high school boys from Oakland in next season's harvesting.

Tulare County will pick its Valencias much earlier than any preceding year. It is thought by the end of March it will stand up under the 8-1 test.

Prospective cotton growers of the San Joaquin Valley are almost a unit in that the valley should grow almost exclusively of improved Egyptian types.

The Central Valley is testing more and more every year the high qualities of the Almeria grape. The time is coming when it will be a big factor in the markets.

President Fontana of the California Wine Association is reported to have recommended manufacturers of wine "to sell stocks and prepare for the end of the industry."

Madera County has a "rabbit association." The rabbit industry is to be encouraged by a drive which it is hoped will end in the slaughter of thousands of cotton tails and jacks.

The Dinuba Grape Growers Association insists that "Dinuba" and "Emperors" are becoming inseparable and mean the same. Lodi long since became "Tokay Town;" Fresno, "Raisin Town;" San Jose "The Prune Center;" and there is no reason why Dinuba should not make a record which will make permanent the name of "Emperor."

## Southern California

Riverside County fair dates are October 1-5.

Orange growers are planning for intercrop of beans.

Ventura County fair dates are September 30-October 5.

A \$70,000 canning plant is to be erected at San Fernando.

Not an idle plow in Southern California since the recent rains.

Dr. I. G. Macbeth recently made an address before farm center of La Habra, Los Angeles County.

Redlands, San Bernardino County, will increase its production of potatoes by at least 50 per cent.

Turnips, tops and all are being used by farmers in Ventura County as a temporary feed for livestock.

Many of the mountain summer resorts of Southern California are now under six to ten inches of snow.

The first car of spinach shipped out of Coachella Valley netted \$4.65 per crate or about 12½ cents per pound.

One day's shipments of fat cattle, sheep and hogs from Imperial Valley to Los Angeles, aggregated 60 cars.

Raisin producers of El Cajon, San Diego County are uniting with the California Associated Raisin Company.

Imperial Valley is now shipping out large quantities of peas, prices ranging around nine and nine and one-half cents.

Several Southern California farm bureau men will attend meeting of farm bureau workers at Berkeley, March 11.

Livestock men of Venutra County have been "singeing" and feeding cactus to tide livestock over period until new feed is ready.

Lemon growers of the Sweetwater Valley, San Diego County report their trees as loaded with immense crop ready for the spring cutting.

The Antelope Valley Farm Loan Association, recently elected directors and made the compensation of the secretary-treasurer one-half of one per cent of the loans made.

Melon shippers of the Imperial Valley have word directly from Washington that cantaloupes will not be classed with non-essentials and that shipping will be expedited as much as possible.

## The Coast and General

Clatskanie, Oregon, has a sour krout cannery.

Arizona cattlemen are appealing for more cow punchers.

A cooperative creamery is to be built at Fort Rock, Oregon.

Utah reports high priced labor and feed as greatly reducing dairy stock.

Planters in the Dominican Republic are planting extensively to castor beans.

The state of Arizona has nearly a million range cattle but only 73,000 dairy cows.

Hoover gives assurance that there will be abundance of sugar produced another 3 ar.

Astoria and Portland were the distributing points for nitrate of soda in the northwest.

The watersheds on some of the Hawaiian Islands are being planted to koa and mahogany trees.

The seventh annual convention of the Arizona Cattle Growers' Association was recently held at Nogales.

A two acre experimental planting of the true mahogany tree is being made in the Makiki Valley, Hawaii., Islands.

Idaho claims to have produced enough sugar in her factories in 1917 to supply sugar to 1,260,000 soldiers for one year.

Hawaiian Islanders are appealed to to make island beans, sweet potatoes and bananas their principal diet in order to conserve food for Europe.

Plant Inspector Ehrhorn of the Commission of Agriculture, Honolulu, reports inspection of about 1,000 lots or 20,000 parcels of plants and seeds monthly.

Arizona is enjoying burro beef. We have heard of drinks with "kick" to them, but burro beef was declared to have none. It was tender, juicy and excellent."

The Eugene, Oregon, Fruit Growers' Association has closed its dried prune pool with an average of ten cents per pound. It handled nearly a half million pounds.

The Girls' Economy Canning Club of Navajo County, Arizona, developed sufficient ability to can fruits and products and sufficient business initiative that a community business of considerable size may be developed from it.

# AJAX TIRES

GUARANTEED IN WRITING 5000 MILES

## Dirt Track Champion of America

Dirt tracks are the same "going" you meet driving to town, to the elevator, the creamery, your neighbors. An Ajax victory on the track is an Ajax victory for you on the road. In 1917 Ajax Tires swept the field in 237 gruelling dirt track contests—winning the title, Dirt Track Champion of America. On performance Ajax Tires are the natural selection—the money-saving tires for the farmer. Ajax Tires have the special patented feature—

### SHOULDERS of STRENGTH

These supports are built into Ajax Tires, giving them "more tread on the road"—more rubber where it should be. These shoulders make Ajax the long lasting, easy riding tire for all roads. "Shoulders of Strength" mean longer wear because road friction does not come in one spot to wear through to the fabric.

### AJAX ROAD KING

"More Tread on the Road"

Ajax Road King proves its superiority on all roads. Guaranteed to uphold Ajax reputation for service. Ajax Road King gives proved surety under wheel. Truly, a monarch in quality, a democrat in service. Note the triangle barb tread—an added safety factor.

### 97% Owners' Choice

Of the total output of Ajax Tires, 97% are singled out by car owners to take the place of other tires that came on their cars. This is an unequalled endorsement of Ajax quality.

Write for booklet on "Ajax Shoulders of Strength." Mailed free.

Factories: Trenton, N. J.

"While Others Are Claiming Quality, We Are Guaranteeing It"

## Income Tax

**N**OW that the department of the interior has extended time for making income tax returns to March 31, there will be no excuse for anyone

running any chance of severe fine because of failure to obey the regulations laid down by congress and the department. Questions continue to come to the Cultivator and we believe their answer will prove of general interest.

One subscriber states that so long as his net income is less than \$2000 and he is married, he will make no return and wishes to know if he is entirely right. This subscriber is entirely correct, but as a word of warning, let us refer to the word "net" in the above query. What "net" income is from the revenue department standpoint and tax payer's own standpoint may be materially different. The law is specific in that taxes, interest paid on money borrowed for investment and a few other items are deductible from our income. There are a thousand and one other items of expense, for instance, anything that pertains to personal or family upkeep may not in any way be deducted. The best way is for a frank statement to be made to the revenue collector, or even to make out the return where there is the slightest question whatever, then correction may be made and at absolutely no cost, and probably it would call for the payment of no income tax, but if the return is not made and then it should be found that the deductions were not proper deductions from the collector's standpoint, a fine which may run into the hundreds of dollars is possible.

A farmer writes, "I held an auction last October. I sold implements and cattle. Must all the return of that sale be reported as income for the year?" No. The implements represented invested capital. If they were sold at a profit, that profit was taxable. As to the livestock, its value presumably has increased each year. Take its value in 1913, and the excess which the stock brought at this sale (less the expense to the year 1917) would be taxable.

Another case, more complicated and one which means that the farmer must pay a fairly good sized income tax is one wherein for years there has been living on the homestead a family consisting of father, mother and three sons. Two of the sons are married. The business has been considered a family affair, the sons having taken hold of the work together dividing the proceeds at the year's end according to the needs and with almost no book-keeping being done. Additional lands have been purchased and severe economy has resulted in building up a business which culminated during the year 1917 with large and profitable sales of products. There is no legal partnership arrangement and this good sized income is considered the prop-

erty of all members of the family. How much deduction may be allowed and how should return for this property be made?"

In this case there should be exemption of \$2000 on the part of each of the two married sons with additional \$200 for each dependent child, and according to the understanding or agreement, the same amount on the part of the two parents, or the one unmarried son might declare himself the head of the family and the parents supported by him. This might provide future means of figuring the deductions, but the worst feature in this case is that expenses covering two or three years preceding were incurred in producing the crops which brought the liberal returns during the year 1917, but these expenses, except those occurring in the 12 months of the year may not be deducted. Unfortunately every year stands absolutely alone. Thus the cash book and expense book or day book answer most of the questions as to income tax fairly clearly; that is beginning with January 1, 1917, every item of income from any source whatsoever must be reported. Then beginning on the same day and ending with the last day of December, 1917, every item of expense may be deducted. Now unfortunately, each year stands alone and it is unfortunate in this particular case, though a period of years will probably right the apparent injustice, and so long as the particular expense for the stock which brought the income is not permitted to be deducted because of its being incurred in a preceding year, then, on the other hand, any expense which may have been incurred in conducting the business for the succeeding year may be deducted. That is, if a person received \$3000 for sale of stock in January, and during the year the expense of the firm for the next year's business amounted to \$1100, this reduces the net income of that business to \$1900 and no report whatever need be made.

Another

"An unmarried daughter living with mother who is dependent upon the daughter's earnings, received \$1200 per year, but according to law, this dependency exempts the daughter's salary or income to the extent of \$2000. We assume no return is necessary on the part of the daughter." This assumption is wrong. If the unmarried daughter has \$1000 income or more, she must make return or be subject to fine. In making return, however, she claims exemption because of the dependency of her mother and it is granted, but the law is very rigid in demanding that this return be made.

"Safety First," hence if there is any question or the margin is so small that the collector may raise a question, then by all means fill out and file return as to your income.

## Farm Implement Shed

By Anton S. Rosing

**T**HE American farmer's all-too-prevalent policy of neglecting his implements is costing him a dollar a week.

It is an item no one can afford to knowingly throw away. Viewed in the aggregate this annual loss is a large amount. In Illinois, for example, there are some 200,000 farms of 50 acres or more. In this state

alone, therefore, there is an annual loss of over \$10,000,000 from this cause. And when state is added to state the result will be an amount which would have a tremendous influence on the present national situation.

This estimated loss of a dollar a week is based on the records of the United States department of agricul-

## The Man-Saver

*The Martin*

Ditcher is a man-saver, and a time-saver—therefore a money-saver. Two men, four horses and a Martin will make or clean more ditch in one day than they could plow and shovel out in three weeks—time and man saving are big items now.

### Fine for Terracing, Dykes and Roadwork

Made in 2, 4 and 6 horse sizes; can be used with tractor. Works equally well on side hill or level, or in wet or dry soil. Handles rocks and cuts alfalfa roots without plowing. Cuts or cleans ditches down to 4 feet deep. All Steel, Reversible and Adjustable. Investigate the Martin NOW.

**OWENSBORO DITCHER & GRADER CO., INC.**  
1570 Wazee Street Denver, Colorado

### Perforated Tree Protectors

Why use anything but a PERFORATED PROTECTOR, which allows free circulation of air and sunshine to gradually harden the tender bark. Practically a small LATH HOUSE ABOUT EACH TREE. Protects from Squirrels—Rabbits—Gophers—Hot Sun—Sand Storms—Barking in Cultivation, etc.

We make a number of kinds. TELL US YOUR PEST, and we will tell you what kind to buy. Get our prices. We can save you money.

#### COLLAPSIBLE PLANTING POTS

Why not raise your early Tomatoes, cabbage, chili and egg plant for home use or for market. Do you know that you can start

Cucumbers, cantaloupes, melons of all kinds in these pots in flats until they have three and four leaves then plant pot and all, have melons two or three weeks earlier for market. Just the thing for Propagating Eucalyptus and Olive cuttings.

Write for samples and prices of both Pots and Protectors. State which you are interested in.

THE EXPAN CO., 935E. Central Ave., Redlands, Cal.

Extra parts are always available without delay for standard advertised machinery. This class always found in the California Cultivator.

ture, implement manufacturers and others. These investigations show that the life of a grain binder, for instance, with the care it now receives on the average farm is less than five years. With proper care this can be increased to 15 years, or a clear gain of over 200 per cent in the useful life of this implement.

An implement shed may be built either as a separate structure or a part of other farm buildings. On smaller farms it may be more convenient to set aside a room in other buildings for the storage of implements during their periods of non-use. Usually when the barn is built it can be so planned that a space in it will be available for this purpose. Where no such provision has been made the farmer will be found to utilize any temporarily unoccupied space for the storage of his newest or most prized implements. The result of this makeshift is that most of the farm equipment has to remain outdoors in fair and stormy weather, and in a short time depreciates greatly in value and working efficiency.

When a separate implement room is built into the barn it should be so planned as to open directly on to the barnyard. Through this ready access will be had to all the fields on the farm. The door should preferably be the full width of the room so the entire floor space can be utilized and make it possible to take out some one implement from the assortment without having to move the entire outfit. A concrete floor raised slightly above the ground and with a suitable approach will provide a firm, dry foundation for the heaviest machine and make a convenient place in which to work on the equipment. Along one side and attached to one of the walls a work bench can be built.

A common type of shed and one suitable under all conditions is the all-enclosed, flat-roof type. This type is rectangular in plan, about 16 feet deep and as long as the amount of equipment may require. The roof may be supported by the walls or by columns. Where columns are used they should be so placed as to leave 12 feet clear between them, to permit easy movement of the widest machines. The space between columns may be walled in from floor to roof so that building is entirely enclosed. Doors should be placed along one end of the long sides of the building and so arranged as to permit of the free movement of machinery into and out of the several bays and the fullest use of the available floor space. Two six-foot sliding doors in each 12-foot bay, hung on an overhead track, will make an ideal arrangement for this purpose. When open they are out of the way and do not interfere with the maneuvering of implements for

positions in the building. The roof should be flat, but with sufficient slope to drain well to the rear or far side of the house. The height of the roof above the floor need not usually exceed eight feet. In the bays reserved for small machinery and where but little head-room is required the unused overhead space may be utilized for the storage of seed corn and of arti-

cles of rare use. The concrete floor should have a slight pitch toward the front, be slightly raised above the ground and have an easy approach from the barnyard.

A concrete implement shed can be built in either of three ways. It may be monolithic, that is, the concrete placed between wood forms erected in place. Or, it may be built of concrete block prepared beforehand, and assembled when a sufficient quantity is at hand. Or again, the concrete may be applied like a plaster on previously erected metal lath securely fastened to posts or columns.

The front of the shed should be facing towards the south or east, or its back toward the direction of the most prevalent storms. If the shed can be placed in a particularly sheltered position then all the walls may be omitted. It then becomes what is called an umbrella shed, consisting only of a concrete floor or platform, and pillars, or posts supporting a roof. The nearness of other buildings, trees and hedges, will serve to give the necessary shelter to the shed. In either case, however, a space in the shed should be partitioned off and entirely enclosed for a workshop and supply room.

The floor and roof should be made of 1:2:3 concrete; that is, one part by volume of portland cement, two parts of clear sand, and three of peb-

bles or broken stone not to exceed one inch in diameter. The columns and walls should be made of 1:2:4 concrete. The floor need not be over four inches thick except where extra heavy machinery is to be stored—a traction engine for example. The roof slab should be about five inches thick, with beams about 12 or 14 inches deep over the columns. The columns should be about 8 by 8 inches in section and should be supported by footings carried below frost line. The roof slab, roof beam, and column should be reinforced with steel rods about three-eighths inches in diameter. All monolithic concrete should be carefully protected against frost or exposure for a week or more until thoroughly hardened before put into use. All concrete block for walls and columns should be made in a shed or room where they can harden without exposure until they are needed.

The cost of a concrete implement shed is not great and it will pay for itself in about three year's time. Thereafter the saving it effects in the implement account by making possible a much longer working life is clear profit. The efficient farmer will not permit this item to escape. The desire for the greatest financial returns and for the most successful farm life, as well the necessity for the conservation of national resources all prompt the earliest and most careful attention to the need for proper care and shelter of the farm equipment.

## Building Service into the "Caterpillar" Tractor

The "Caterpillar" Tractor is built for service—everyday, dependable service, regardless of weather or ground conditions.

That sort of service is insured by correct design, by careful construction, by proper choice of materials—some of manganese bronze, some drop-forged, some case-hardened—each selected for the special work it must do. And into the construction of every "Caterpillar" Tractor goes Holt experience of 35 years in manufacturing.

The results are:—exceptionally low operating and upkeep costs, long life, higher efficiency and bigger profits. "Caterpillar" Tractor owners will testify that the purchase of this tractor is an investment that pays big returns. Send for complete "Caterpillar" Tractor information.

State Dairy Cow Competition

Finals for Many of the Cows Which Were Great Producers.  
Awards on Pages 330 and 338

HIS is the week of making awards at Davis to dairy-men of California who have competed for the purses and prizes aggregating \$7500.

These dairymen have been in this contest during the past year, or rather,

er, covering an entire period of 16 months. Some of the final figures of production of cows which will be winners were given in the Cultivator of a few weeks ago. Here are the figures of production of cows not formerly given.

No.	Name of cow	Age	Days in milk at start of record	Milk	Butterfat	Total Credit for Butterfat
				Lbs.	Ave. Per Cent	
1.	N. S. H. Monte 1st, Gr.	6	17	20,596.4	762.287	3.70 762.287

Prospects in the Southwest

Written for California Cultivator By A. L. Spellmeyer

HE drouth has broken; rain and snow has relieved the situation for the future months but of course cattle loss will probably continue for the first weeks of green grass on many ranges where stock is poor and weak. The main consideration is, however, that there will be spring and summer feed.

To figure spring conditions we have still to know and experience the kind of weather which will follow the present storms, as a late cold spring, outside of California especially, would cause considerable cattle loss, whereas a warm spring—and conditions indicate the latter—would result in an exceptionally good year for the cattle which have come through hardship and drouth. California beef will

be not over plentiful, which fact may help feeders to secure better returns for their stock and to make up a portion of their loss.

The facts are that both the sheep and cattle in the Southwest have been hard hit during the past year, and a conservative estimate would be \$50,000,000 of loss and extra expense borne by the livestock business of the Southwest during the past year.

There is however a brighter side for the stockman, as there is every prospect for good prices and strong demand, early grass for the spring and summer, and cheaper roughage and forage. The depletion caused by forced marketing can have but one result, additional demand to be realized during the coming year. We must remember further that cattle

PURE BRED

REGIST'D HOLSTEINS

All Holstein breeders agree that "Pontiac Korndyke" was the greatest transmitting sire, both through sons and daughters, that ever lived. His greatest son and the world's only double century sire, is "King of the Pontiacs," with 228 daughters in the A. R. O. list. These two sires combined have more 40-pound, more 30-pound, more 25 and more 20-pound daughters than any two sires that ever lived—and these two sires are respectively the grandsire and sire of

## King Korndyke Pontiac

The senior sire of our herd. Isn't that enough to convince any thinking person that our King must be a wonderful animal? Some breeders surely think so, when they finally bid up his 18-months-old son to \$6,500 in the recent guarantee sale last December. But a great sire must also have a great dam. Below is the picture of his dam, May Korndyke 2nd. Look at her size, her big middle, showing wonderful capacity, and finally her wonderful and uniform udder. Have you ever seen a more perfect animal? This cow in turn came from the old foundation cow May Korndyke, with 30.69 pounds of butter in seven days, and was sired by "Beauty Pieterje Prince," who is recognized as one of the greatest sires of the breed. Wouldn't a young bull sired by "King Korndyke Pontiac" breed up your herd? We have several and are selling them most reasonably. Give us an inquiry. It doesn't cost you anything, beyond postage, and we think our reply will really surprise you.

JANE GARDEN FARM

loss will mean such loss must be replaced. Much land of the Southwest can be used for no other purpose than grazing stock, and in order to pay interest and expense stock must be grazed, so that from Texas to California drouth stricken ranges will be in the market for cattle to replace those which have died or been shipped out.

There are in the West over 20,000,000 of the 43,000,000 beef type cattle in our country, and the Southwest should normally produce millions of young steers and breeding stock, which will be far below normal supply this year. "The drouth hurt the calf crop and those surviving are in many cases not up to the usual standard of quality in bone and flesh. There have been freakish spots however. For instance, Northern Arizona, in the higher portions, has had the best year for a decade, and there has been less loss and cattle is in better condition than usual. This has been largely on account of the open mild winter, and last summer rains made good grass and the mountain streams supplied a sufficiency of water.

Outside of California and portions of Southern Arizona and Texas rain and snow came January 8 and before in parts of New Mexico, while plentiful rains had already arrived in the Northwest. The sheep on the desert in Arizona were being fed corn and meal and alfalfa to keep them alive during the lambing period, and while rains started there during the latter part of January grass did not start very fast, and it was not until the last rains in February that a fair season became assured. There will be some loss and there has been already a considerable loss of lambs, but a 50 or 60 per cent lamb crop seems reasonably assured, so that the sheep man will not be put out of business but have a chance for a moderate profit.

We therefore face a depleted supply, a strong market, and a reasonable assurance of plentiful grass in the near future. In many places there will be more forage than grain, and later in the year the past year's soft corn experience in the Middle West will result in more cattle feeding if feeders are not discouraged by the loss experienced this year, which high feed and low cattle prices caused.

The old contention that a stock man must make an extra ten per cent to take care of bad years has proven true again, as some men have been so hard hit it will take years to recover, and some of the California men have been hit so that they will have difficulty in again stocking up unless measures are taken to supply them with reasonable term money with which to purchase cattle. The stock business is not all profit.

The Arizona men expect better wool prices than last year, and the general expectation is that yearling steers will be higher than last year, some of the northern men talking \$40 for the best grades already. One contract at \$40 is rumored for some extra good yearling steers and \$41 for yearling heifers, but definite prices are as yet not made. Hides are lower than for years and leather and shoes are higher than ever before known. Our last dry flint hides brought less than 20 cents, whereas two years ago we got 40.

The net profit in cattle is considerably less today than three years ago and the uncertainty and expense is more. However by proper methods an excellent percentage can be realized from stock cattle on yearlings

from \$30 up on most range lands and at \$35 up on leased pasture lands. Alfalfa land at present lease prices is out of the question except in the crises to carry cattle through for a short period or to fatten beef. It can be readily understood how cattle and feeders lost money, when grain and forage was much higher than usual and prices realized from fat stock less this winter than usual.

The tendency seems to be towards younger cattle again this year, whereas last year the big demand was for aged steers, but with cheap forage and the hope for a better market for beef, together with the restocking demand, probably cows and younger cattle will be in exceptional demand.

What the stockman of California needs more than anything else right now is support from banks and bankers so that money at fair interest rates can be secured to enable purchase of livestock and the holding over of forage as a safety measure for the future, as cattle are not going to be easily secured this year.

#### SALE OF PURE BRED HOLSTEINS

The Western Washington Holstein Breeders' Association in preparing for its seventh semiannual sale anticipates its greatest success this year because of the high quality of the offerings. As an indication we may refer to the fact that there is a son of the King of the Pontiacs in the bunch of 85 pure bred. The sale is to be held at Kent, Washington, April 17. It is to be a guarantee sale.

#### THE CULTIVATOR ON THE WESTERN FRONT

The following is in letter from one of Uncle Sam's boys, E. H. McCallum, Company A, 18th Engineer Regiment, somewhere in France, who was until last year an horticulturist in California, to A. R. Gould.

"I received your Cultivator safely and noticed your article. I must say it is good. I showed it some of the boys and they were of the same opinion. It is a very useful article." The Cultivator frequently goes to France and we understand that the boys enjoy reading of the doings agriculturally in their fertile state."

### HOLSTEIN-FRIESIAN CATTLE

Registered young bulls from best families.

#### REGISTERED BERKSHIRE PIGS

Masterpiece, Longfellow, Robin Belle, Rookwood, Duchess and Rival's Champion's Best Strains. Fine individuals of both sexes — we pay registration fee. Careful attention given to mail orders.

Sacramento - Cal.

When writing advertisers, mention the Cultivator.

## Are You Shooting on All Four?

Ever bump along the road in an automobile shooting on two cylinders, wasting gasoline and oil, panting and sputtering at every little grade, having to drive way over on the edge of the road to make way for the fellows going past shooting on all four?

How about your herd of registered Holsteins? Is your herd of good cows, representing half your breeding power, carrying all of the load, while the other two cylinders represented by your herd bull are contributing nothing to your advancement?

Why not hitch those good cows up with a real herd bull, get the herd shooting on all four, and keep out in front of the Holstein procession?

### Sir Veeman Korndyke Pontiac

will put a world of power into your breeding machinery, and you can buy him at your own price when we sell him in R. F. Guerin's sale.

## Consider These Facts

SIR VEEMAN KORNDYKE PONTIAC is sired by Sir Veeman Hengerveld, now with over 90 A. R. O. daughters including a larger percentage with records above 30 pounds than are credited to any other bull. He has upwards of 100 daughters yet to freshen and go on test, and is today in active service in one of the very best eastern herds.

SIR VEEMAN KORNDYKE PONTIAC is out of Beatrice Korndyke Pontiac Veeman, 30.13 pounds butter in seven days. Her sire is Sir Korndyke Pontiac Artis, son of Pontiac Artis who made 31.71 pounds butter in seven days, 1076.91 pounds in one year, and her dam is Countess Veeman Beryl Wayne, a 29.88 pound four year old daughter of Sir Veeman Hengerveld.

SIR VEEMAN KORNDYKE PONTIAC is just three years old, a big, strong, straight individual, already has over 30 living daughters and is bred to about 65 good cows and heifers, assuring him at least 60 living daughters before he is four years old.

SIR VEEMAN KORNDYKE PONTIAC is the only son of Sir Veeman Hengerveld in service on the Pacific Coast, and if you have any doubt as to the value of one of his sons out of a 30 pound dam, just price one.

SIR VEEMAN KORNDYKE PONTIAC is qualified in every way to head any herd of high class registered Holsteins, and with the breeding start he already has he is one of the rarest opportunities ever offered in the shape of a herd bull in a western sales ring.

SIR VEEMAN KORNDYKE PONTIAC is a real, high power herd sire. There will be keen competition for his ownership in this sale, and he will be a bargain at any price that is paid for him well up into four figures.

### 69 Registered Holstein Cows and Heifers, 11 Registered Holstein Bulls

will Comprise the Offering in this Sale, which is the Entire Breeding Herd Owned by R. F. Guerin, and will be Held on His Farm Near VISALIA, CAL., THURSDAY, APRIL 4, 1918.

Mr. Guerin is keeping nothing except all of the heifer calves from Sir Veeman Korndyke Pontiac, affording breeders an opportunity to buy at their own price all of the splendid cows and heifers that are the result of his fifteen years of constructive breeding from a good foundation. The females will include among others these great attractions:

FOUR DAUGHTERS OF WINIFRED HOTALING, dam of Winifred Hotaling 2nd, 33.92 pounds butter in seven days, 19,951 pounds milk and 874.12 pounds butter in one year, and Winifred Hotaling 3rd, 32.19 pounds butter in seven days, who sold in the Guaranty Sale for \$1750. Winifred Hotaling is one of the only three cows in California that have produced two daughters with official records about 30 pounds butter in seven days.

TWO DAUGHTERS OF A 27.42 POUND FOUR YEAR OLD that milked 680.1 pounds in seven days.

A DAUGHTER OF SPRING FARM KING PONTIAC 6TH, whose two year old daughters are making wonderful official records.

A BEAUTIFUL 20 POUND COW and her three daughters, one of them a 22.27 pound three year old.

TWENTY-NINE DAUGHTERS OF ARCADY PON-

TIAC WAYNE HENGVERELD, who has the largest list of A. R. O. daughters of any sire yet developed on the whole Pacific Coast.

THIRTEEN GRANDDAUGHTERS OF JUDGE HENGVERELD DE KOL, whose 41 A. R. O. daughters have official records up to 34.19 pounds butter in seven days, 1227.46 pounds in one year.

SIXTY-FIVE COWS AND HEIFERS in calf to Sir Veeman Korndyke Pontiac, one of the best bred young herd sires in the west.

TWENTY-ONE COWS AND HEIFERS with official records up to over 24 pounds butter in seven days.

#### BULLS

A SON OF SIR VEEMAN KORNDYKE PONTIAC out of a 28 pound dam.

A SON OF SIR VEEMAN KORNDYKE PONTIAC out of a 27.42 pound four year old that milked 680.1 pounds in seven days.

SEVERAL OTHER SONS OF SIR VEEMAN KORNDYKE PONTIAC out of good record dams.

DAIRMEN—Don't miss this opportunity to buy splendidly bred, well marked, straight young bulls at your own price.

This sale will be conducted under the regular sales contract of this company by which every animal sold is absolutely guaranteed to be a breeder, sold without reserve, limit, or by-bid, individual tuberculin test certificate with each animal, and EVERY ANIMAL SOLD SUBJECT TO TUBERCULIN RETEST BY THE PURCHASER. Catalog free on request. Write for one. Management of

## Field Notes from the Live Stock Men

King of the Pontiacs is dead. But his blood will always live in some of the world's greatest Holstein herds. It will be remembered that only last summer this great old bull sold at public auction for \$12,500 although the buyers well knew that the grand old fellow was likely to drop out at any time. They were recently credited with the statement that they had over 60 high class cows in calf to him, which gives them a good safe margin over their investment. Four sons of King of the Pontiacs are in service in California in the herds of Fred W. Kiesel, Sacramento; Millbrae Dairy, Millbrae; James McGillivray, Sacramento, and E. O. McClure, Santa Ana.

Sir Pietertje Ormsby Mercedes has entered the charmed circle of sires with 40 pound daughters, through the record of his daughter, Bess Burke Ormsby, who had to her credit at last report 42.31 pounds butter in seven days and still in test. As a junior two year old this cow made 17.38 pounds butter in seven days, 17,935.7 pounds milk and 856.46 pounds butter in one year. As a junior four year old she made 29.32 pounds butter in seven days. She calved this time at five years two months. She is out of Spring Brook Bess Burke, 34.80 pounds butter in seven days, 1094.16 pounds butter in one year, who now has a 42 pound daughter, a 38 pound daughter, a 33 pound daughter, a 31 pound daughter, a daughter with 1235.32 pounds butter in one year and another with 1044.91 pounds butter in one year. Only one herd of Holsteins in California has any considerable amount of this blood on both sides, the one herd being that of The McCloud River Lumber Company, McCloud. They own a fine son of Sir Pietertje Ormsby Mercedes, and also own a number of good granddaughters of Wisconsin Bess Chief, the sire of Spring Brook Bess Burke. Their herd also contains upwards of 50 granddaughters of Sir Ormsby Hengerveld De Kol and Sir Korndyke Hengerveld De Kol, that are also being bred to Sir Pietertje Ormsby Canary, their son of Sir Pietertje Ormsby Mercedes.

Bridgford Company, Knightsen, recently purchased 227 acres of the best land in the Patterson district, Stanislaus County, on which they will build a fine residence and adequate and modern buildings to care for their great herd of registered Holsteins which will be moved to the new farm as soon as the buildings are ready. The Patterson Colony is being developed on the rich lands of the famous 18,000 acre Patterson Ranch, which is one of the best bodies of land in California. It is very conveniently located, tributary to the great dairy section on the west side of the San Joaquin Valley. The addition of the Bridgford herd to Stanislaus County Holstein breeding circles will mean much for dairy progress in that county.

R. L. Holmes, Modesto, is building up a selected herd of registered Holsteins. Practically all of his purchases were made in the public sales during 1917. Recently official testing was begun, and two very good records have been completed. Jane Creamelle Hengerveld, bought from A. W. Morris & Son in the third Sacramento sale, calved as a junior two year old, dropping a fine heifer calf by Sir Aaggie De Kol Acme, and made 21.48 pounds butter in seven days.

She is sired by a 33 pound grandson of Hengerveld De Kol. Blue Bell Karel Walker, bought from Gotshall & Magruder in the Guaranty Sale, also calved as a two year old and made 16.80 pounds butter in seven days. This heifer is a beauty and looks most promising for great production as she matures. She is a daughter of King Walker 5th. These records were made under very ordinary conditions, but seem to indicate something of what may be expected when Holmes Stock Farm gets into its stride.

J. H. Harlan Company, Woodland, recently added another good record in their herd when a junior two year old daughter of King Mead of Riverside made over 23 pounds butter in seven days.

Dominita Colantha De Kol 2nd, owned by Kounias Registered Stock Farms, Modesto, recently completed the very nice official record of 27.68 pounds butter in seven days as a senior three year old. She is a most attractive type of heifer and seems likely to materially increase her record later on. Last year she made 22.42 pounds butter in seven days as a senior two year old.

A good move is under way in several sections among orchardists and others who keep one or two cows. The idea is to buy good registered cows to furnish the family with milk, cream and butter, thereby making more certain good production and the securing of a calf that will be of good value. Such a move is thoroughly practical at this time when good herds of registered dairy cattle are becoming well distributed throughout the state and the services of high class bulls are available without the owner of one or two cows being compelled to make a large investment in a sire. It is reported that some of the farm bureaus are discussing the registered cow question at present.

Burpil, in the registered Holstein herd owned by J. D. & B. H. High, Modesto, recently made an official record of 23.29 pounds butter from 477.6 pounds milk in seven days. Her sire is out of the same dam as Boweda, 31.91 pounds butter in seven days.

Elliott-Brant Rancho, Owensmouth, is working out a large success with their registered Guernseys. Although the herd has been steadily increasing in size it has never yet been able to meet the demand for whole milk that has developed because of the quality and purity of the product put out by this establishment and which is sold at wholesale for 18 cents per quart. The large official records made by cows in this herd have also brought a large business in the sale of young bulls, keeping the herd sold right down to calves most of the time.

Stratford Segis Blanche De Kol, a junior four year old daughter of Sir Segis Hengerveld De Kol, recently made an official record of 26.62 pounds butter from 601.8 pounds milk in seven days. She is owned by Stalder Bros., Rosamaines Farm, Riverside.

A new state record junior two year old for butter production in seven days is still in test in the herd of registered Holsteins owned by Bridgford Company, Knightsen. This is Bessie Veeman Korndyke who freshened at two years three months. She already has over 25 pounds butter to

## Elliott-Brant Rancho Guernseys

We have an especially fine bunch of young Guernsey bull calves to choose a future herd sire from. Guernsey bulls cross well with all breeds of cattle and they increase the quality and color of the milk as well as the quantity of milk and butter fat. The Guernsey bull has won the battle with the scrub cow.

We have calves from A. R. cows with different sized records up to 750 pounds of butter fat. Our prices are reasonable and are based on breeding and records. Write and tell us your needs and we will tell you how we can fill them.

Elliott-Brant Rancho - Owensmouth, Cal.

her credit in seven days and is expected to increase. Another junior two year old, Empress Korndyke Pontiac, has completed a record of 96.76 pounds butter in 30 days, also a state record in class, while still another junior two year old, Nattalene Walker, broke state record for milk in class for both seven days and 30 days, making 549 pounds in seven days and 2247 pounds in 30 days.

Many New Holstein Breeders are doing official test work and not a few of them are going to start right in with yearly tests. Which is a good thing for the breed and a better thing for the breeders. Only a few years ago most small breeders had little hope of getting a cow across the 30 pound line. Today there are a good number of 30 pound cows in this state that have been developed in small herds, and a 30 pound cow is worth more money today than ever before. A good cow without a record may be worth say \$400. Let her prove herself by making say a 30 pound seven day record or a corresponding yearly record and her value in the estimation of buying breeders immediately jumps three, four and five fold or more, and the value of her offspring by a good bull increases in proportion. Thus the beginning breeder who takes up testing at once is displaying good business judgment, not alone to establish better selling values but to guide his own breeding operations.

Tilly Alcartra still continues to outdo herself. She is still on strictly official test and recently milked 115 pounds in one day, the biggest day for milk she has ever had during her more than five years on test. She has now been in milk over 60 days and is making over 33 pounds of butter in each seven days at the present time.

A. W. Morris & Sons, Woodland, recently installed milking machines. The registered Holstein establishments in the state seem to be taking up machine milking rapidly, and from reports are finding it a success.

Tulare Holstein Farm, home of the \$6500 bull King Korndyke Pontiac 20th, owned by W. J. Higdon, Tulare, is making splendid development in the way of official records under the capable care of Harry L. Redd. The junior two year old Madrigal Mooike 2nd has made 20.46 pounds butter from 551.6 pounds milk in seven days, 80.56 pounds butter from 2138.5 pounds milk in 30 days. She thus has the California state record for milk in seven days for a junior two year old, displacing the recently made record of Nattalene Walker. She made her best seven day record three weeks after calving, and is still in test, milking over 74 pounds per day. Leda Hartog Ormsby 2nd made 24.89 pounds butter from 606.3 pounds milk in seven days. She is sired by Lad Legend of Kakenstein 2nd, one of whose daughters, Winnifred Piebe De Kol 2nd, recently made 33.09 pounds butter from 637.3 pounds milk in a herd up in Washington. Hartinga Willis made 24.14 pounds butter from 614.8 pounds milk in seven days, and is now on 30 day test. Thelma Hartog De Kol has to her credit for the first seven days on test, 31.09 pounds butter from 525.8 pounds milk, and is quite certain to increase these figures materially. She is an exceptionally good type of cow and has four living daughters, three of them owned by Mr. Higdon and the fourth by Alex Whaley, Tulare. There are some other good ones just going on test at Tulare Holstein Farm, and before the

## Save Butter-Fat, Time and Labor for Yourself and for Uncle Sam with a NEW DE LAVAL CREAM SEPARATOR

### Save for Yourself

Butter-fat right now is selling at the highest price in many years, and you can't afford to waste an ounce of it.

Whether you are trying to get along without any cream separator or using an inferior or half-worn-out machine, you are losing valuable butter-fat that would soon pay for a New De Laval.

The De Laval is not only a cream saver but a time and labor saver, and with the present shortage of farm help every farmer needs to utilize time and labor saving machinery wherever it is possible to do so.

### Save for Uncle Sam

It is the patriotic duty of every cow owner to save butter-fat. We are a nation at war, and not a particle of fat should be wasted. When all European countries are encouraging the use of the best cream separator, can we do less?

### Buy Your De Laval Now

Railway delays are so serious that deliveries can't be depended upon, and if you don't order your De Laval early there is no telling when you can get it. Then, too, labor and material conditions may compel higher prices. The sooner you get a De Laval saving butter-fat and labor for yourself and Uncle Sam, the sooner it will pay for itself.

If you haven't the spare cash right now, that need not stand in the way of your getting a New De Laval at once. We have an arrangement with De Laval agents which makes it possible for any reputable farmer to secure a De Laval on the partial payment plan—a small payment at the time of purchase and the balance in several installments—so that your De Laval will actually pay for itself while you are using it and getting the benefit from it.

Why not see the nearest De Laval agent at once? If you do not know him, write to the nearest office for new catalog or any desired information.

season is finished there will be a bunch of good record cows and heifers to mate with King Korndyke Pontiac 20th.

### State Dairy Cow Competition

California Cows Make Magnificent Showing in Competition Which Began in 1916. Full List of Winners is Given.

Through courtesy of Professor F. W. Woll our subscribers are permitted an advance look at the awards of the judges to winners of the California State Dairy Competition. This competition has meant much to the dairy interests of the state, and the winners are to be congratulated at the wonderful showing made.

In the following announcement of awards the first figures following the name of winner give actual or average butter-fat production, while the second give the credit due because of the handicap under rules governing the competition:

"4. In order not to place young animals at a handicap in the award of prizes, the records for production actually made by cows under five years of age shall be increased in accordance with the average results obtained in authenticated yearly tests of cows of different ages, as follows: Records made by cows under 2½ years at the beginning of the test shall be increased by 30 per cent, and those made by older heifers and cows shall be increased as follows: for heifers 2½ to 3 years old, by 24 per cent; for cows 3 to 3½ years, by 18 per cent; 3½ to 4 years, by 15 per cent; 4 to 4½ years, by 8 per cent, and 4½ to 5 years, by 5 per cent."

#### HERD PRIZES

For the highest production of butter-fat by ten cows in a herd during ten consecutive months.

##### Class A, Jerseys or Guernseys

1st, \$300, J. W. Coppini, Ferndale, 435.85, 470.95.  
2nd, \$200, Guy H. Miller, Modesto, 394.49, 418.18.

##### Class B, Holsteins

1st, \$300, A. W. Morris & Sons Corp., Woodland, 588.75, 656.62.

##### Class C, Other Breeds and Grades

1st, \$300, G. E. Trigg, Ferndale, 557.36, 580.54.  
2nd, \$200, Iver Iversen, Arcata, 558.56, 576.41.  
3rd, \$100, F. Stenzel, San Lorenzo, 540.24, 558.86.  
4th, \$50, J. W. Coppini, Ferndale, 520.57, 532.86.

#### INDIVIDUAL PRIZES

For the highest production of butter-fat by a cow during ten consecutive months.

##### Class A, Jerseys or Guernseys

1st, \$200, Palo Alto Stock Farm, Imp. England's Lady Orange, G., 585.82, 585.82.  
2nd, \$100, J. W. Coppini, Ferndale, Gerlie Olga of Ferndale, J., 500.99, 576.14.  
3rd, \$50, Elliott-Brant Rancho, Owensmouth, Little Beauty 2d, G., 532.77, 575.39.  
4th, \$25, A. J. Welch, Redwood City, Imp. Alicia of Linwood, G., 531.47, 573.99.

##### Class B, Holsteins

1st, \$200, A. W. Morris & Sons Corp., Woodland, Miss Valley Mead De Kol Walker, 819.42, 966.92.  
2nd, \$100, Palo Alto Stock Farm, Palo Alto, Jennie Terzool Hicks 4th, 764.94, 764.94.

3rd, \$50, A. M. Bibens, Modesto, Abbie De Kol of East Bank 2d, 656.61, 656.61.  
4th, \$25, Mrs. Anita M. Baldwin, Santa Anita, Princess Zozo Pontiac, 587.17, 634.14.

##### Class C, Other Breeds and Grades

1st, \$200, Napa State Hospital, Napa, Monte 1st, Gr. H., 762.29, 762.29.

3rd, \$50, Iver Iversen, Arcata, Roan Cow, Gr. G., 685.84, 685.84.  
4th, \$25, G. E. Trigg, Ferndale, Brindle, Gr. J., 632.44, 632.44.

#### SPECIAL PRIZES

1. For the highest average production of butter-fat during ten consecutive months by a grade herd of 10 to 25 cows headed by a pure-bred sire. Choice of an Ayrshire, Guernsey, Holstein, and Jersey bull calf, offered respectively by J. W. Clise, Seattle; A. B. Humphrey, Mayhews; K. W. Abbott, Milpitas, and N. B. Locke Co., Lockeford.

1st F. Stenzel, San Lorenzo, 540.24, 558.9.  
2nd, G. E. Trigg, Ferndale, 537.88, 553.3.  
3rd, Iver Iversen, Arcata, 519.99, 531.9.  
4th, J. W. Coppini, Ferndale, 502.27, 513.5.

2. For the highest average production of butter-fat during 10 consecutive months by a grade herd of more than 25 cows, headed by a pure-bred sire. Choice of an Ayrshire, Guernsey or Jersey bull calf, donated respectively by E. B. McFarland, San Francisco; W. A. Saylor, San Francisco; C. G. McFarland, Tulare, and of \$100 worth in pure-bred Guernsey or Hampshire males, donated by Dr. J. W. Henderson, Berkeley.

1st, Bohnett Bros., Campbell, 384.02, 401.56.  
2nd, J. M. Christen, Pacheco, 219.37, 242.29.

3. For two herds having the largest and next to the largest number of cows producing over 300 pounds of butter-fat in 10 consecutive months, two prizes, choice of a 2-unit outfit of the "Calf-Way" Milker, donated by the "Calf-Way" Milker Co., Chicago, and a 2-unit Sharpless Mechanical Milker, donated by the Sharpless Separator Co., West Chester.

1st, J. W. Coppini, Ferndale, 21 records over 300 pounds fat.  
2nd, G. E. Trigg, Ferndale, 15 records

## The California Polytechnic School

San Luis Obispo, Cal.

Offers

### For Sale

the Following Stallions:

The Clydesdale Stallion,  
Chief Guardsman, 18756

Grand Champion in both open and State classes and winner of first premium in both classes, at State Fair, Sacramento, Cal., September, 1917.

The Percheron Stallions:

Master, 122755

School Boy, 117687

Director, 117686

and one unregistered stallion, foaled April, 1916.

The first three Percherons were exhibited at the 1917 State Fair, receiving five ribbons—Reserve Champion, First, Second, Third and one Third Premium Award.

To any one purchasing the unregistered stallion the opportunity will be offered for selecting such name as may be desired.

The above stock is second to none and an excellent opportunity is afforded for securing first-class breeders at reasonable prices.

This School now has more studs than it has use for in its course of instruction and for breeding purposes and for that reason the above are offered for sale.

Correspondence and inquiries solicited.

**Dutchland Sir Pietertje Creamelle**

our herd sire, whose sire is Pietertje Hengerveld's Count De Kol and out of the great transmitting cow Changeling. His dam is a daughter of the former world's record cow Creamelle Vale, and is by a grandson of De Kol 2nd, the foundation cow of the De Kol family.

He has 14 A. R. O. daughters, records all made in our herd, with records up to over 30 pounds butter in seven days at three years. We especially appreciate the orders of dairymen who want good young bulls at modest prices. Write for prices and descriptions.

## Production and Type

You can breed both type and production into your dairy herd if you use one of our good young sons of

### Prince Riverside Walker

His sire, Prince Gelsche Walker, has one world's record daughter and several have broken California State records, and his daughters are also noted as a group because of their great dairy capacity, well balanced udders, and good teats.  
His dam, Aaggie Acme of Riverside, is also the dam of the world's official yearly record butter cow, Aaggie Acme of Riverside 2nd. She is a cow of tremendous capacity, a beautiful udder, and has transmitted her quality to her offspring.

The young sons and daughters of PRINCE RIVERSIDE WALKER are of extra good type, and they can not fail to keep on the great production to which they are bred. We have only a few of his young sons left. They are priced moderately at figures any dairyman can well afford to pay, and they are straight, well marked young fellows out of good dams. Come and see them, also their sire and dams, or write for prices and descriptions.

Our Entire Herd is Tuberculin Tested

## Tulare Holstein Farm

W. J. Higdon, Owner TULARE, CAL. H. L. Redd, Herdsman

### Blood Will Tell

PRINCE ALCARTRA KORNDYKE must transmit great production, it's in his blood on both sides. His sire, Korndyke Queen De Kol's Prince, who has six A. R. O. daughters with records up to 35.10 pounds butter in seven days, and her dam in turn is the great Belle Korndyke, four A. R. O. daughters, who is the dam of the mighty Pontiac Korndyke, the greatest transmitting sire the breed has produced.

The dam of PRINCE ALCARTRA KORNDYKE is Tilly Alcartra, 40.78 pounds butter in seven days, the only cow that has both a 40 pound seven day record and over an 1100 pound yearly record, and she is by Alcartra Polkadot Corrector, son of the great foundation cow Alcartra Polkadot, who has five A. R. O. daughters, two of them above 33 pounds, and another above 31 pounds.

The first five daughters of PRINCE ALCARTRA KORNDYKE to compete yearly test as two year olds, average 15,333 pounds milk and 675.92 pounds butter. If you want to breed big dairy producers put one of his sons at the head of your herd. We can sell you a good one at a price you can afford to pay.

The J. S. GIBSON CO.  
Williams, Cal.

## Santa Anita Rancho

Anoakia Breeding Farm

## Registered Holsteins

Our senior herd sire is MERCI LAD KORNDYKE BURKE, son of De Kol Hengerveld Burke and Winnie Korndyke Cornucopia De Kol, 31,034.14 pounds milk and 1201.06 pounds butter in one year, the first cow in California to make over 1200 pounds butter in one year.

He is acknowledged one of the best individual sires in the west and is transmitting his type to his offspring in a wonderful degree. A limited number of his young sons out of good record dams are offered for sale at moderate prices. Inquiries or orders by mail will receive prompt attention.

SANTA ANITA RANCHO, Santa Anita, Cal.

W. H. Taylor, Supt.

Anita M. Baldwin, Owner

## —Just the Bull You Need—

### A Son of King Mead of Riverside

To increase your herd production and improve its type and markings. He is a nice one, ready for service, straight, deep-bodied and three-fourths white. Remember that King Mead is in the front rank as a sire of great yearly record cows, and no other bull of the Holstein breed has transmitted as high per cent of butterfat.

The dam has a record of 818.36 pounds butter and 20,144 pounds milk in a year. She has two sisters that average 1110 pounds butter and 28,817 pounds milk. She is a daughter of Ignaro De Kol, the only bull in the world with ten daughters that have each produced 20,000 pounds milk in a year. You will miss a golden opportunity if you overlook this one. The price is within the means of any progressive dairyman.

## Ornamental Garden Notes

Written for California Cultivator by Ernest Braunton

### Just Thickets

In England a popular feature of large places is a shrubbery walk. It is the only place in a garden that paths are permitted that are not really necessary. I believe I built the first one in Los Angeles, to mask some houses too close up to the garden I had in charge. You may lay out a rambling series of paths, doubling back on themselves, crossing over without very definite direction and leading nowhere in particular. Yet have the curves graceful and paths far enough apart so one will not be seen from another, and in "doubling back" leave a core or central plantation wide enough for a thicket. Now plant along these paths and between them, using several of each kind of shrub in a place and all of that kind in the one place. Some may be dwarf trees, some dwarf shrubs. Don't have too much design or spacing but plant naturally or carelessly (in effect).

### Live in the Garden

In California we should live much out-of-doors. I do not have in mind camping, motoring, hunting, fishing or golfing, but simply staying at home. Here we may stay out in the garden nearly every day in the year, and yet the average local garden is not planned with that end in view; not as much so as the average garden of the far Eastern states. You of the rural districts do not need "excursions" to gain fresh air or out-door life; have your garden habitable. Also have your porches large, comfortable, and secluded, yet light and airy. Don't have anything cramped about a rural home or you may as well go to the city where you cannot have things otherwise. Have arbors, garden-houses, covered seats, shaded seats, hammocks, secluded grass plats—everything that will provide ease and comfort out-of-doors in all sorts of weather.

### Do Not Train and Prune

The rural garden plants should not be trained and pruned as they usually are in all gardens. I positively hunger, betimes, for a path where shrubs or low trees have grown together over a path, yet none will permit them this simple, perfectly natural tendency. Every plant, seemingly, is told to "stay on your own side of the road" or path and is strictly "herded" with that end in view. I call to mind old gardens far beyond the Rockies where lilacs, syringas, dogwoods, bush honeysuckles and the like grow year after year, without care, direction, or restriction; just like being "out in the woods." Why do we not have such gardens in California? Many of the shrubs named grow in clusters so that they interlace over one's head and the only pruning done is that with a view of having reasonably clear headroom when wandering about. The rural garden should smack of such simplicity and lack of training everywhere.

### Grow Common Plants

Do not plant many rare untried plants except in small herbs that are but incidentals. Though long recognized as an expert plantsman and acquainted with nearly all we grow I am weary of striving for the unnatural, this ceaseless coddling and pampering to coax a plant into some semblance of natural vigor. The subjects should be treated as a business matter is; if the upkeep exceeds the income it is a

failure; sell out or shut up the shop. After I have done everything possible for a plant for two or three years and it still is sickly or unproductive, out it must come. One gets as cold and uncharitable towards such plants as he does towards the grouchy confirmed dyspeptic among humans. Let us use plants that are tried and true so that both ourselves and the garden may appear cheerful, and not feel reproached by the plants because they are out-of-sorts. We garden, or should do so, for pleasure.

### Summer Mulching

More and more am I coming to believe in summer mulching. I get the best results from crops where mulches are used and no cultivation is given. With no crop is this method productive of better results than with my favorite gladiolus. After 15 years of constant experiment I shall use no other method in ordinary garden soil. It will hold as good with roses and other vegetation; the best roses I ever saw were in adobe soil of almost unworkable texture. The soil was very rough and lumpy and was covered with four inches of strawy stable manure. The watering was done with sprinklers but it was well done, no mere sprinkle, but an hour or hours at each setting. All summer one could walk in on dry straw and pick roses; a genuine success. Irrigation and cultivation could never do more; but all the work was thorough and the mulch a most generous one.

### Root-prune All Trees

Unless your soil be deep and loose surface root-pruning should be practiced. It may be best in any and all cases, especially with some trees, acacias for example. Nearly all species of acacias are surface-rooters in any soil, the blackwood excepted. One year after planting the soil should be dug away from around the trunk and all roots within one foot of the surface cut off smoothly close to the trunk. At two years cut them off in the upper two feet. After this they should care for themselves in the matter of root control. Large and sufficient roots should have been put out at lower levels. If, however, there are signs of recapture of top soil, trees should be examined and roots intruding in surface soil cut off. Such treatment renders trees more resourceful, prevents robbing of surface crops, and in street trees protects curb and sidewalk from rupture.

### FLOWER GROWER

Madison Cooper of Calcium, New York some four years ago started the "Modern Gladiolus Grower." It has appeared regularly and with increase in beauty and value of matter in its columns. It now begins the fifth year greatly enlarged in size and scope and under the title, "Flower Grower." The publisher says: "It is our aim to print facts and information of permanent character rather than news items." However, we doubt not the paper will keep in touch with the larger movements along amateur and professional flower producing line.

Complete reports for 1917, secured by the United States food administration, give the total pack of canned tomatoes as 15,076,074 cases of two dozen cans each. This is the largest amount packed since 1914 and is equivalent to more than three cans of No. 3 size for every person in the United States.

## GENERAL FAVORITES

The hydrangea group are favorites with all and generally are well known, more especially the one called hortensis, or "Hortensia." While classed as deciduous shrubs, in warm locations some are evergreen. Hydrangeas produce a heavier flower crop than any other shrub; hence, their

Hydrangea

universal popularity. They may be had in pinks or whites, or if blue is desired a liberal quantity of iron filings, rusty nails or any form of iron rust in the soil will change the flowers to blue. These shrubs are for full or partial shade and do not thrive so well in full sunshine. They are partial to rich deep soil and enjoy a copious supply of water at all times. They are so aristocratic in appearance as to be decidedly front yard favorites with all who plant them.

## DURANGO IN IMPERIAL

Desiring information as to the contemplated planting of Durango long staple cotton in Imperial Valley this season, we wrote the Imperial Valley Long Staple Cotton Growers' Association, and President Argyle McLachlan answers:

"On account of the excessive damage sustained by the long staple (Durango) cotton last season from water shortage the acreage of this variety of cotton will in all probability be reduced this season. However, there will be approximately 20,000 to 25,000 acres planted on both sides of the international boundary. Our association has sold a total of 56 tons of Pima-Egyptian cotton seed to about 130 growers. The acreage planted to Pima cotton will be from 4000 to 5000 acres. There is not at present any seed remaining for distribution to other sections in the state from the quota of seed allowed us by the Tempe people but there is a bare possibility that there may be some left over in the hands of the Winterhaven Commercial Company at Winterhaven, this county. This company secured seed from Tempe the same as ours.

"The cotton market at present is not very satisfactory because of the slowness of sales. However, we expect improvement in demand and are at present consigning much cotton to New Orleans to have it in the market for delivery when the market improves."

## GOVERNMENT POTASH PLANT

The government plant at Summerland, started as an experiment to demonstrate the possibility of salvaging potash from giant kelp on a commercial scale, has already proved a success.

F. W. Brown, in charge of the office of fertilizer investigations, bureau of soils, United States department of agriculture, has returned from an inspection trip much pleased with the way the plant is working.

He found the plant running as far as the production of kelp char which contains potash. This has to be leached out, evaporated and crystallized. The evaporating and crystallizing machinery has not yet arrived at Summerland. It is on the way, and Mr. Brown expresses confidence that the

entire process will be carried out within a few weeks all within the government plant.

In the meantime the kelp char is being sold, and the dried kelp, in sufficient quantities to pay the operating expenses of the plant.—American Fertilizer.

## Paint on the Farm

**T**HERE is no investment on the farm that will compare with paint, suggests the editor of Twentieth Century Farmer. A few dollars invested in paint and properly applied to the buildings adds more to the appearance, attractiveness and general desirability of the farm as a place to live, a home to own or as an investment, than ten times—yes, often 50 times—this expense in any other line of improvement that can be added to the farm. What are your impressions when you travel through a farming district on railroad or by other conveyance and your attention is brought to the old, weather beaten barn, the unpainted dwelling and the other buildings of lesser importance, all dingy, weather-worn, dull, unpainted?

There is but one impression and every person who sees these conditions on the farm is similarly impressed—"the home of a careless, shiftless farmer, a man without pride or

an ambition to be up to date." This is the verdict every time.

On the other hand, what impression is created by the nicely painted buildings, everything on the farm in clean, bright colors—barns, stables, sheds, hog houses, wagon sheds, implement and tool houses—everything, in fact, brightened up with a little paint? It did not cost much for the material and nine chances out of ten the farmer painted all these buildings himself, except perhaps the dwelling. Such places are attractive; they are admired for their clean, homelike appearance; they tell the kind of citizenship and character of the owners. Land with such improvements has ready sale, and a neighborhood peopled by such a class of farmers is a desirable community to live in.

It is the best investment any property owner can make, be he a resident of village, town or farm. Buildings will last almost indefinitely if kept painted, given a coat every three or

four years. There are many brands of mixed paints that are advertised, guaranteed, warranted to wear and not blister or scale off. These paints are put up in gallon cans and are all ready to be put on and can be applied by anyone who can spread whitewash. The farmer should have a work shop and be, as the saying goes, "a jack of all trades," and not necessarily the master of any but farming. The farmer of today should be able to do repairing in many lines of work. It is folly to run off to town for all the little breaks that are sure to occur on the farm from time to time.

Paint up; get on the bright side of life and show your colors! Paint everything; don't leave a gate or gate post that is not brightened or freshened up with some good color. It adds value to the appearance of the farm that means hundreds and often thousands of dollars in its sale.

## REPORT TREASONABLE ACTS

Commissioner Hecke is requesting county horticultural commissioners to report any treasonable activities which may be discovered. The following suggestion is made by a special agent of the department of justice:

"The department of justice is doing everything in its power to assist in combating the sabotage program of the I. W. W.; and we shall be very glad to have you report to us all instances where it seems reasonably certain that destruction is wrought by members of the I. W. W. organization on either crops or buildings. It is only by closest cooperation of all parties interested that we can hope to cope with the situation."

## BEST IN THE LONG RUN

# Trust a Trustworthy Brand Mr. Farmer

**EX**PERIENCE has taught agriculturists to trust standard products. A name and a brand, backed for years by good service of the goods and good faith of the maker, mean security in purchase and security in service. They safeguard against deceitful appearances.

Appearances were never more deceiving than in tires. Your surety in tires is the name and brand of Goodrich; for Goodrich, the oldest and largest rubber factory, has meant the *best* in rubber since the harvest days of the old "Buffalo Pitts" thresher.

Goodrich tires mean to-day all Goodrich rubber has ever meant. The farmer can put his trust in Goodrich whether he is buying tires for his automobile, large or small, tires for his trucks, or motor cycle, or bicycle tires. He gets the sure service of—

## GOODRICH TESTED TIRES

Here is proven service, and it means guaranteed service in miles for your money. Here are tires that withstand the gnawing of the road between your farm and the town, because they are tires that have fought the teeth of the road in every section of our country, and won with phenomenal mileage.

Goodrich Test Car Fleets have tested Goodrich Tires for a year against all sorts of roads, and in all sorts of weather, and have proved their dependability, mileage and economy.

Put your faith in Goodrich Tires, whatever type of tire you need, for "America's Tested Tires" are worthy of your faith. They will save you time and money and give you comfort in return for your trust.

**Plant a Few Acres of Dwarf Milo Maize** for seed. Good seed requires about 2 pounds per acre. Choice pedigree Dwarf Milo, 10c per lb., in quantities of 10 lbs. or more. Fred M. Mahoney, Box 420, Tulare, California.

**For Sale, Seeds, Feterita, Milo Maize,** White Egyptian corn, 1500 pounds common alfalfa, 19 cents. Peruvian alfalfa, 600 bushels Sudan. Box 501, Fowler, Cal.

**Few Thousand Pounds of good re-cleaned Sudan grass seed** at 20 cents per pound, any quantity f. o. b. while it lasts, order now before price goes higher. J. K. Schick, Proberta, Tehama Co., Cal.

**Rhubarb Plants**—Crimson Winter Burbanks \$3.00 per hundred; Victoria \$3.00, Wagner's Giant Crimson Winter \$3.00, 50 cents per dozen. Currier Bulb Co., Seabright, Cal.

**Seed Potatoes**—Fine strains Oregon Grown White Rose, American Wonder, White Star, Burbank, etc. Write for prices and descriptive book. H. A. Hyde, Watsonville, Cal.

**Wild Grapes for Arbors, Jelly, etc.** Cuttings, 12 50 cents, 36 \$1.00. Postpaid. Order now. Hazel Wiles, Anderson, Cal., Box 701.

**For Sale**—Pink beans. Choice seed. Hand cleaned. Ten cents per pound in lots of fifty pounds or over. A. Osburn, Redlands, Cal.

**Soudan Grass**—A few thousand pounds of Soudan grass seed for sale. Write for prices. L. A. Gunther, Los Molinos, Tehama Co.

**Seed Potatoes**—Very fine. Selected from patch yielding 200 sacks per acre. 3 cents per pound. H. D. Carden, Victorville, Cal.

**Mitchells Everbearing strawberry** our specialty. \$1.00 per 100 plants, \$5.00 per 1000 plants. Primma Vista Gardens, Arlington.

**Strawberry Plants**—Everbearing northern grown, strongly rooted. Price list free. F. I. Moffett, Ellensburg, Wash.

**For Sale**—Sweet potato plants. Joe Thompson, 1502 West Washington St., Santa Ana, Cal.

**R\*O\*S\*E\*S** 50 cents per dozen. Write for Catalogue C, and special prices. Kavan Nurseries, San Bernardino, Cal.

**New Hybrid Alfalfa**—Great underground stooler, growing thicker (not thinner) with age. J. L. Lawson, San Jose.

**For Sale**—Avocado and Guava Seed. Write for prices to Mrs. L. M. Chafee, Sherman, Cal.

**For Sale**—Yellow Jersey sweet potato plants, \$3.00 per thousand. Flake Smith, 835 Parton St., Santa Ana, Cal.

## ENGINES

**Tractor International (45 H. P.)** used 6 months, cash price \$2000. Cost new \$4000. Will exchange for valuable land anywhere on cash basis. Joseph Clark, Sacramento.

**Several New and Slightly Used Engines.** ARNOTT & CO., Implements, 112 S. Los Angeles St., Los Angeles.

## CATTLE

**For Sale**—Imperial Sir Ormsby De Kol No. 186008. He was 2 years old January 16; is well grown and has large bones; is evenly marked and a perfect individual. His sire is McCloud Prince Ormsby, half brother to Fietertje Maid Ormsby, 35.56 pounds butter in seven days (world's record 1911); half brother to the sire of Duchess Skylark Ormsby, 1507.38 pounds butter in 365 days (world's record over all ages and breeds). He is for sale only because I am retiring from business. For further particulars and price address J. W. Hastain, Brawley, Cal.

**SHORTHORN CATTLE, SHROPSHIRE SHEEP, Berkshire Hogs and Shetland Ponies.** Get our prices and descriptions before buying. Butte City Ranch, Box C, Butte City, Glenn Co., Cal. W. P. Dwyer and W. S. Guilford, Owners.

**Pedigreed Bull Calves**, Registered \$50.00, unregistered \$25.00. Service bulls \$75 and up. Good individuals from producers. Cows with yearly records at a profit, tuberculin tested. Write or come and select. Horses. N. H. Locke Co., Lockeford, Cal.

**Registered Holstein Bulls** from high producing dams for sale at reasonable prices. Also a few choice females. McAlister Sons, Chino, Cal.

**Venadera Jerseys**, the herd with official yearly records. Calves of both sexes for sale. Guy H. Miller, Route 1, Modesto, Cal.

**Ayrshires (registered)**—A few young bulls, heifers and cows in milk at a bargain for quick sale. A. MacMinn, Phoenix, Ariz.

**Young Holstein Bulls**, bred right, grown right, priced right. Creamcup Herd. M. Holdridge, Modesto, Cal.

**Sunshine Farm Jerseys**—Bulls from officially tested dams for sale. E. Greenough, Merced.

**Registered Holstein Bulls** of various ages for sale. Millbrae Dairy, Millbrae, Cal.

**Registered Jerseys**—1 yearling bull for sale. J. R. Carhart, Fullerton, Cal.

## FARM LANDS FOR SALE

**Buy Land Where They Raise the Prize Crops**, in Snohomish County. 40 acre farms, \$25 per acre. Ten yearly payments, 6 per cent interest. Visit our offices and see the great exhibit of PRIZE WINNING Vegetables, Fruits, Grains, Alfalfa and other Grasses raised on adjoining farms. They prove our claims that this is the best land in Western Washington. Paved roads. Four passenger trains a day. Graded School, Cannery, Creamery, Cheese Factory. Plenty of work for the laboring man in the mills and camps, where 75 settlers are all boosters. DON'T LOSE A DAY in asking for our illustrated literature. BROWNELL LAND CO., 904 Third Ave., Seattle, Washington.

**For Sale or Trade 240 A.**—Relinquishment, situated 20 miles east of Brawley on Main line Santa Fe, on Ocean to Ocean Highway, adjoining townsite. 80 A. cleared, 40 A. plowed. Vicinity of flowing wells. Will sacrifice for \$10 per acre. Good reason for selling. Wm. Stokes, Hemet.

**For Sale**—160 acre improved ranch, 11 miles from Long Beach, 1 mile from Westminster. Good alfalfa, beet and bean land. Plenty water and good buildings. \$225 per acre. Possession next September. W. F. Marks, 226 S. Main St., Los Angeles.

**Coachella Valley**—40 acres, 4 apricots, 6 dates, 6 grapes, 11 onions, 55 inches water, motor 15 cents hour, house, stock, implements, alfalfa. Net income \$3500. Price \$17,500. Ten Thousand Cash, balance time. C. W. King, Indio, Cal.

**Information Free** about state and government land bargains especially stockraising, homesteads. Joseph Clark, Sacramento.

**For Sale or Exchange**—4 acres in city of Santa Cruz, for Los Angeles or Orange County acreage. William Richard, Santa Cruz, Cal.

**For Sale**—10 acres, 3 1/2 acres grapes, fig border. House, barn, pumping plant. \$1000 cash, \$2000 mortgage. Edith Hyatt, Clovis, Cal.

## AGRICULTURAL IMPLEMENTS

**The U. S. Cream Separator** like John Brown's soul, goes marching on. If you want to know about the new United States or need repairs for old one, write H. E. Walker, Sales Mgr., Box 364, Portland, Ore.

**IMPLEMENTS AND RANCH SUPPLIES.** Samples and slightly used. Four floors. Large stock. Liberal credit. Save 50 per cent on some. No branches. ARNOTT & COMPANY, INC., The Yellow Front. Established 1892 112-118 S. Los Angeles St. Los Angeles

**Now in Fresno County**—One 14-28 h. p. Rumley Farm Tractor, (\$2300.00). One new 6 gang Sanders Engine Disc Plow. For quick sale \$1000.00 for both. B. Care Cultivator.

**For Sale**—Bean Sprayer with four hoses, complete. Almost new. Reasonable. Address C. P. Stone, 1393 W. 8th street, Riverside, Cal.

## TURKEYS

**Mammoth Bronze Eggs** our specialty. "Gold Nugget" and other strains of Mammoth type, also Collie Pups. John G. Mee, St. Helena, Cal.

**Mammoth Bronze turkey leaders** of Imperial Valley toms, 8 months weight 26 to 30 lbs., price \$15.00 to \$25.00 each. E. V. Blaschko, Sillsbee, Cal.

**Eggs—Bourbon Red and White Holland turkeys.** Toulouse geese, Guinea, Buff Orpington chickens. E. A. McKinley, R. D. Ukiah, Cal.

**Giant Bronze Turkey Eggs** from America's leading strains. M. M. Reiman, Planada, Cal.

## MACHINERY

**WHY BUY NEW? SAVE YOU HALF MATERIAL GUARANTEED** Ranch tools, plows, cultivators, drills, harrows, 50 windmills, 150 redwood, iron tanks; pumps, sundries.

**USED PLOWS, CULTIVATORS, DRILLS**—All sizes, walking, double 14-in. riding Moline plows, never in ground, \$75; double disc, \$85, 3-disc, \$95; 4-disc, \$95; extension disc cultivator, \$35; 4-gang Stockton, fine shape, \$35; spike harrows, \$18; sundries; cheapest in town.

**SIX USED GRAIN AND FEED DRILLS**—READY to ship; 10-ft. Hoober, \$95; beet drills, \$45 up. Plows, harrows, WINDMILLS, POWER MILLS, MORE FOR LESS—12-ft. Aermotor power mill, develops 2 h. p. in 20-mile wind, costs nothing to run, \$68; cost new \$140. 16-ft. mills for irrigating, \$95; saves you \$150. 8, 10-ft. mills. Now is time to get what you want, when we have complete stock ranch tools.

**HOW'S THIS?—10,000-GAL. CORRUGATED** galvanized tank, \$195; 8000-gal., \$135; 900-gal. steel riveted 3-16 wagon tank, \$80, with wagon, \$95.

**COMPLETE PUMP OUTFIT; PUMPS** 50 inches at 50 ft; 3-in. Krogh vertical pump frame shaft; 9 h. p. engine belt; on cars, \$250.

**ODDS, ENDS, PORTABLE BLACKSMITH** forge, \$6.50; slip scraper, \$6; oil wagon tank, engine and sprinkler, \$90; wheel scraper, \$25; feed chopper, \$4; bone grinder, \$10; galvanized chicken feeders, \$1.50; mounted power tree sprayer, \$65; power blower, \$8; hot water boilers, \$3.50; riding weeder, \$14; sickle grinder, \$9; wagon tank, \$26; 4-in. riveted pipe, 16 cents; sundries.

**COMPLETE PUMPING PLANT:** pump 14 inches at 100 lift. This job not junk; only used two years; 8 h. p. engine, 20-stroke Buckeye pump, jack, hardwood rods, forged couplings, 7-inch brass cylinder, 8-in. casing, \$450. This saves you \$300. This job won't last long. Get busy. It's a bargain. Office DEMMITT CO., 120 N. Main, upstairs, Yards, 816 Yale, Los Angeles.

**For Sale**—One 18 h. p. "Olds" distillate engine, mounted on wagon. One 50 h. p. "Olds" distillate engine; one 20 h. p. "Muncie" oil engine; one water well drilling rig; one spraying outfit, one wooden wagon running gear. The above used machinery may be priced at our shop. Will be sold at a very low figure. Dunn Manufacturing Co., Oxnard, Cal.

**REMANUFACTURED PIPE** All sizes, standard pipe, and wrought iron screw casing. All kinds of fittings. Guaranteed good as new. Write for prices.

**WEISSBAUM PIPE WORKS,** 169 Eleventh St., San Francisco.

**Gasoline Engines**, the largest stock of used gas engines in California from 2 h. p. to 100. Thoroughly overhauled. Machinery Exchange, 733 North Spring St., Los Angeles.

**For Sale**—Holt caterpillar tractor, John Deere disc plow and harrow. W. O. Tingle, 456 North Lake Ave., Col. 6177, Pasadena.

**25 h. p. Western and Lane-Bowler 10** inch vertical. Good condition. Hale, Owensmouth, Cal.

## AUTOMOBILE TRAILERS

**All Sizes.** See our stock. Immediate deliveries. Lowest prices. Arnott & Company, Inc., 112-118 So. Los Angeles St., Los Angeles.

## GOATS

**Toggenburg Milch Goats**—Rae P. Williams, Federal Realty Building, Oakland, Cal.

## Feeding the Farm Hen

Written for California Cultivator By Jean A. Koethen

IT HAS been frequently stated that about 90 per cent of all the eggs produced in the United States are produced on general farms. If this is true it simply points to the farmer as the original and never to be superseded poultryman. Poultry is essentially a farm crop and is more easily raised and more cheaply fed along with other crops. No other hen is as cheaply fed as the farmer's hen, and no other hen is as often neglected. The food administration, in asking every farmer to keep a flock of at least a hundred hens, is only asking him to cultivate a crop which will bring him bigger returns for the money invested than either cattle or hogs. In many cases the farmer already has the feed for his flock; in others he can easily manage to raise most of it. Always he has the range which makes poultry keeping easy, and always he is in greatest need of the manure such a flock will produce. A single hen produces about 30 pounds of roost manure and perhaps 20 pounds of day droppings per year. Fifty hens will provide all the fertilizer needed on an acre of ground. Three hundred hens in a year should produce, if they are fed a full ration of mash and grain from seven to eight tons of manure.

It is assumed that poultry kept on the general farm will be given range a part of the time. This is important in keeping down expense. Hens allowed to forage about the barnyard, through grain fields and over the alfalfa, will pick up a large part of their ration. Such hens will lay a good many eggs if given only a night feeding of grain in addition to the green stuff, waste grain and bugs and worms they pick up. Professor Dryden of the Oregon station, in his new book "Poultry Breeding and Management," gives two sample rations for hens kept under strictly farm conditions. One of these allows 60 pounds of corn per year per bird, the other 60 pounds of wheat in addition to what they pick up. Both allow 50 pounds skim milk, ten pounds green cut bone, five pounds beef scrap, 15 pounds vetch, alfalfa or clover, 20 pounds kale, three pounds oyster shell and one-fourth pounds salt. This means the birds pick up more or less waste grain in ranging the fields; that they are given a fairly good feed of wheat or corn at night, a pan of clabbered milk or cottage cheese sometime during the day, and all the green feed they will eat. If they do not find sufficient green feed on range it must be given them, but hens that range where any greens are growing will always get their share.

What grain is fed depends entirely upon its availability and cost. Professor Dryden's book went to the publisher last year before wheat became taboo for fowls. Doubtless under present conditions he would prescribe barley or milo or corn raised by the farmer himself. In discussing the choice of a ration, he says: "Profitable poultry production is not a question of the best foods any more than it is a question of the cheapest foods. That is to say, the best foods from the standpoint of composition and palatability may produce more eggs or more meat but may produce less profit than other foods that are not so valuable, pound for pound, on account of their lower cost. The feed bill may be so high that the poultryman

is robbed of his profits. No one kind of food is so essential that the poultryman must feed it no matter what its price may be."

The rations given above are the simplest possible for the farm hen. "They may be very much improved," says Professor Dryden, "by the simple method of keeping a hopper of dry bran accessible to the fowls at all times. They would be further improved by adding a little middlings or shorts and a small amount of linseed meal to the bran in the hopper. Adding the bran, middlings and linseed would cut down the amount of wheat necessary. This makes a very good ration for the general farm."

If we substitute for the corn or wheat of the above ration the milo and barley recommended by Professor Dougherty in his more recent bulletin, "Poultry on the Farm," we shall have a farm ration adapted to the present needs. Prof. Dougherty allows each hen 75 pounds of feed per year, 15 pounds each of barley and milo, and a dry mash mixture composed of five pounds each of ground barley, wheat bran and wheat shorts, two pounds soy bean or linseed meal, three pounds beef scrap or fish meal, one-half pound charcoal and one-tenth pound sifted dairy salt. Feterita, Egyptian corn or Indian corn may be substituted for the milo, or part of it, and plump oats for the barley. This is a ration nearly all of which can be raised by the farmer. Milo, Egyptian corn and the other sorghums are easily raised on almost any soil. Indian corn will have to be raised by California farmers, it appears, if we are to have it for our chickens. If wheat is or can be made one of the farm crops, shrunken wheat and wheat screenings may be used instead of the bran and shorts in the mash. When sour milk or buttermilk is available no other animal food need be given.

The easy way to control and feed hens on the farm is to have a good-sized run where the hens can be confined a part of the time. Here they are fed at all times. Here their mash hopper is kept. They run out to forage but they come home to eat. If hens are always fed in the same place they are easily controlled.

I have mentioned milo, Egyptian corn, feterita, barley and Indian corn as feeds all easily within the power of the farmer to produce. In addition to these there are vegetables of various sorts. The half-sugar beet and the sugar beet itself are excellent for poultry. The tops furnish green feed, the root a good amount of fairly succulent material, much of which can be used by chickens. Turnips are easily grown and useful in the same way. There is no better green than the top and the roots, cooked, make a palatable addition to the mash. Cab-

Keep your poultry free from lice. Look out for the setting hens now—put Instant Louse Killer in the nests before adding the litter and eggs, then the brood will come off free from vermin.

**DR. HESS**  
**Instant Louse Killer**  
**Kills Lice**

Put it in the dust bath—that's always a good thing to do. Just as good for animals as for poultry. DO THIS: With one hand stroke the hair the wrong way, with the other sift in Instant Louse Killer. Especially good for lousy colts and calves right now.

**GUARANTEED** by Dr. Hess. The dealer will refund your money if it does not do as claimed.

California

bage and collards are useful mainly as greens, yet all these vegetables contain considerable egg-making material. If they are kept before the hens it is surprising how much will be consumed in a week. They do not take the place of whole and ground grains but they do diminish the consumption. Beans and peas of poor quality are worth while for chickens

because of the protein they contain. They may be either ground or split or cooked according to convenience. Naturally one would not care to give chickens legumes that were fit for human food, but sometimes there are unmarketable left-overs that may be used in this way. In fact, there is practically nothing grown on the general farm that may not be utilized for chicken feed.

## Insect Enemies of the Garden

By F. H. Chittenden, Entomologist in Charge of Truck Crop Insect Investigations, Bureau of Entomology, United States Department of Agriculture.

**L**IME acts to a limited extent as a deterrent against certain insects which may be in or on the soil, such as maggots and grubs, and is a good remedy for slugs. Air-slacked or hydrated is the best form to use.

### Gas Lime

Gas lime is particularly valuable against certain underground insects. It may be placed between the rows of some crops, but as a general rule should be used after the crop is off. It is a refuse or by-product of gas manufacturing plants and is simply lime through which the illuminating product has passed in the primary stage of purification. It may be obtained frequently for the mere cost of hauling. It is highly impregnated with gas and tarry substances when perfectly fresh, giving out a strong odor for several days after being applied. It should be remembered that it will kill plant life as well as insects, and it is best to use this on a small scale before employing it extensively.

### Lime-Sulphur

Lime-sulphur is a valuable spray for fruit trees, but not suited for use on vegetables. Experiments have shown that potatoes are injured rather than benefited by it.

### Nicotine Sulphate

For small garden plats one teaspoonful of nicotine sulphate should be used to one gallon of water, to which a one-inch cube of hard soap should be added and thoroughly mixed. If a larger quantity is desired, use one fluid ounce to eight gallons of water, with the addition of one-half pound of soap. Full directions are given on the covers of the packages, and instructions accompany them.

For large forms, like the pea aphid, the nicotine should be used slightly stronger, and for small kinds, like the spinach aphid, it may be used considerably weaker.

The following nicotine-spray formula will be found the best for the average aphid or plant-louse on truck crops, as well as for thrips:

Nicotine sulphate (40 per cent), three-eighths of a pint, soap (dissolved), two pounds, water, 50 gallons.

This formula gives one part nicotine sulphate to 1000 parts of water.

The quantity of soap required will vary with the quality of water, more soap being required in "hard" water; but on the average the proportion specified in the formula will give satisfaction. An examination of a freshly sprayed vine will show whether there is sufficient soap in the mixture. If the spray draws together in drops and the spray draws together and drops more soap should be added. Where possible, fish-oil soap should be used, but if it can not be procured, cheap laundry soaps will do. The composition of the cheap soaps is variable, and if too much soap is used, some injury may result to tender foliage.

In the use of nicotine sulphate the effective application of the spray is of the utmost importance, since it is primarily upon this that the success or failure of the treatment depends. If the liquid has stood for any length of time it should be agitated thoroughly before use. The insects themselves must receive a thorough coat of the spray or they will not be killed, and immediate inspection after spraying should show the foliage occupied by the insects to be completely wet.

Spraying should be done as early as possible, always on the first appearance of the insect, not only because it is good practice to keep the plants free from pests, but because more thorough work can be done on small plants.

### Soap Preparations

Soaps of most kinds are of value in solution as washes and as sprays in the control of certain noxious insects. Both hard and soft soaps are employed, and so-called whale-oil soaps, usually manufactured from fish oil, are of great value and much used. Among these are cresol soap and resin fish oil soap. Such soap is usually prepared by dissolving one pound in four to ten gallons of water. On some hardy plants a solution of one pound of soap to two gallons of water can be used, but this strength is harmful to delicate plants and must be used with caution. The best strength for ordinary plants is about one pound in six to ten gallons of water, applied as a spray. It is of most value against plant-lice, minute leaf-bugs, leaf-hoppers, and thrips, and against some forms of small soft-bodied and sensitive insects and their young. Soaps possess no particular advantage, however, over nicotine sulphate or kerosene soap emulsion, but are easier to prepare than the latter.

Neutral soaps of the Castile type are much used on plants grown under glass and as a means of checking the ravages of plant-lice, thrips, red spiders, and some other forms of small insect pests. They are particularly valuable against many insects which obtain their food by suction.

### Homemade Soap

Homemade soap can be prepared by following the directions printed on cans of lye for household use. It will save considerable expense, and those engaged in gardening can do this work at odd times or when the garden is wet with rain.

### Sulphur

Sulphur compounds are valuable for the red spider and for some other forms of mites, but they should be followed by syringing or spraying with neutral soap solutions or water.

South India is producing large quantities of common red peppers, or chiles, which are dried and ground. Her shipments amount to about 8,000,000 pounds annually.

## Moline-Monitor Double Disc Grain Drill

Produces bigger crops with less seed

With a Moline-Monitor Double Disc Drill you can produce bigger crops with less seed. Thousands of farmers are doing this every year and many of them have made enough money from the seed saved and the extra wheat produced to pay for the drill the first year.

Moline-Monitor Double Disc Furrow Openers deposit the seed at a uniform depth in a wide, compact furrow. Less seed is required because it has plenty of room to stool and every seed germinates, grows and ripens uniformly, resulting in a bigger and better crop. The double discs are long wearing, light in draft and cannot be clogged in mud or stinky ground.

In case you prefer a single disc, shoe or hoe furrow opener, any of these can be

obtained with the Moline-Monitor Drill. All Moline-Monitor furrow openers are interchangeable and are unequalled for good work and light draft.

The Moline-Monitor fluted feed gives an even discharge in any desired quantity of any and all kinds of seeds without bunching or skipping.

Pipe frame made of one piece. Lighter weight but stiffer and stronger than angle iron. Angle iron bed rail, cross bar and steel spreader prevent all possibility of the frame sagging or springing backwards.

Straight line of draft direct from furrow openers to horses' hames makes the Moline-Monitor very light indraft.

See your Moline dealer or write for illustrated catalog. Address Dept. 49

# Questions and Answers

ANSWERS BY EDITOR AND STAFF

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

## Planting Beans

Am told there is no market for Blackeye beans. Wish to plant them because I have land near the foothills and rabbits do not bother them so much as the Tepary variety. Can you give me information as to where to sell them?—Subscriber, Hemet.

See leader article and also Mr. Musser's hints in next week's Cultivator. We have had several inquiries as to whether Blackeye beans will be destroyed by the rabbits, and while we have made several inquiries do not find any who have observed any difference in the rabbits' likes or dislikes in any of the bean family. We will be pleased to hear from subscribers who have observed the behavior of rabbits towards Blackeyes.

So far as market is concerned, we have not even heard of there being no

sale for Blackeyes excepting that all bean markets have been quiet for a couple of months. We think there is no question but sale may be made in any of the market centers.

## Holding Moisture

Have just finished plowing 15 acres stiff adobe, the kind that cracks, with the intention of planting milo. Our neighbors say it will not hold moisture to mature a crop of milo planted, say May 10. Please advise us.—Subscriber, Chico.

The sufficiency of moisture for any crop depends so much on the rainfall and the amount taken in by the land and the period when it falls, subsoil and so many other considerations, that only a good guesser can answer at long range such a question. If subsoil conditions are such that the rains go down deep into the soil, we think that with present indications as to rainfall you will be entirely safe in planting milo as a dry farming crop. The ground should however be fitted

just as soon as sufficiently dry after these rains and kept in best of tilth so as to conserve every drop of the moisture.

## Substitute Flours

Where one has his own mill and a large supply of potatoes with milo and other grains, including corn, is he still compelled to buy substitutes, pound for pound when he buys flour? If so, is there no relief?—Subscriber, Independence.

We have written California Food Administrator Merritt and hope to have a ruling in this matter. So far as the grocers are concerned, they seem to have no leeway, but certainly many farmers are grinding their own meals and some using far more than 20 per cent of substitute, and there should be some method of permitting the purchase of flour without having to buy substitutes at the long price which is obtaining now for corn meal.

## Petunia

Where can I buy the Royal Purple petunia, the kind that was exhibited at the Panama Pacific International Exhibition at San Francisco? I have been watching all catalogues and publications for that purpose but I have

failed to get the desired information. A beautiful flower like that should not be allowed to disappear for lack of advertising.—Subscriber, Corona.

We think any seedman advertising in this paper can supply seed of these petunias. We purchased them last year, and, as the writer says, they are a wonderful flower.

## Best Crop

I would be glad to know if any kind of beans could be grown in the enclosed package of soil, or squash or what do you think would be the most valuable crop to put in? I have plenty of water for irrigation.—Subscriber, Lancaster.

The Cultivator is not situated so as to be able to analyze soil, and in fact, soil analysis in this case would be of little value. From the physical examination it appears an excellent soil and typical of much of the soil in the Antelope Valley. Of course one of the first considerations in the growing of a successful crop is a good soil, and knowing all other conditions, knowledge of that soil is valuable, but climate, amount of rainfall, market demands in the section in question are also of great importance. So far as this soil is concerned it looks as if it was perfectly adapted to the growing of squash or beans. See list of beans for different sections of state on page three of this paper.

## Registering Berkshires

What steps are necessary to register Berkshire hogs?—New Beginner, Dinuba.

Write Frank S. Springer, American Berkshire Association, Springfield, Illinois.

## Seed Potatoes

Will it harm seed potatoes to keep in cold storage, and what is the right temperature?—Subscriber, Victorville.

No. Keep at temperature around 36 without too great humidity.

## Intercrop for Horse Feed

What may one sqw between orange trees to cut in spring and summer for feed for horses?—Subscriber, Redlands.

A small amount of feed may be grown by drilling in a strip of barley, or, still better, especially as to the quantity, perhaps one of the sorghums, such as Sudan grass. This makes a very good hay, superior to the timothy hay grown by Eastern farmers. The other sorghums, such as the larger growing kafir and milo, are also good. One word of warning, however, as an orchardist one must bear in mind that the vigor of the trees is the first consideration and that any intercrop takes strength and moisture. For best tree results this must be returned, and in the case of moisture it is a question of consistent summer attention.

## SALE OF SHORTHORNS

The California Shorthorn Breeders' Association announces a sale of pure bred Shorthorns to take place at 478 Valencia Street, San Francisco, April 11. Some of the bulls will be exceptionally high grade stock which will be prized by breeders of pure breeds, and in addition there will be an offering of bulls for the range man who is anxious to make the greatest amount of beef in the shortest period of time. The stock will come from some of the finest Shorthorn ranches west of the Mississippi River.

The consignors are: Alexander & Kellogg, William Bond, Wm. M. Caruthers, H. M. Elberg, Foster Company, Thornton S. Glide, Jack London Ranch, Ormondale Company, Pacheco Cattle Company, Paicines Ranch Company, University Farm. The sale will begin at 1 o'clock.

POLICE DEPARTMENT  
LIKES THE ASKE

We are "tickled to death" with the Aske Regulator, it's worth its weight in gold to all Ford owners.—Joseph A. Lee, Police Department, Hall of Justice, San Francisco, Cal.  
One of the many testimonials received.

## Why

Every Ford Owner Wants

## The Aske Automatic Voltage Regulator

## Because

It Gives Bright Lights at All Speeds

## "The Aske"

\$5.00

The only patented device on the market guaranteed to continue the operation of one light without increased voltage should one light burn out.

"The Aske" is a safety necessity—for on rough roads—at slow speed you can have bright lights.

Get your "Aske" now—Play Safe.

For regulator and tail light. With dimmer, \$6.00.

Play Safe—"Ask for an Aske."

Aske Instrument Board

The Aske Instrument Board is highly finished in black enamel—complete with Flush Type Dust Proof Clock, dimmer and push and pull switches, which are standard with the higher priced cars and wired with the best lighting cable cut to lengths for installation, also rear lamp adapter for converting oil lamp into electric.

Aske Dual Lighting System adds beauty, utility and distinction to your car, decreases steering wheel vibration, eliminates all lighting and starting trouble and gives a wonderfully efficient system.

## Electrify and Beautify Your Ford

Your Ford equipped with the Aske instrument Board and Regulator has all the lighting conveniences of higher priced cars.—The added beauty and convenience make the Aske Lighting Units worth many times its price to any Ford owner.

Ask the man who knows the Aske Lighting Units.

The Aske Lighting Units are sold at most dealer's or will be sent direct to you upon receipt of price and dealer's name. Write for our descriptive booklet.

## Aske Voltage Regulator Co.

Duluth

Minn.

NOTE—The Aske Regulator can only be used on 1915 and later model Ford cars commencing with factory number 565155. Unless car is equipped with 1915 or later model magneto, which can be secured from any Ford dealer at small cost.

Note attractive appearance of The Ford equipped with the Aske Dual Lighting System.

Instrument Board complete with Regulator...\$18.00

Instrument Board complete without Regulator \$13.00

Instrument Board complete without Regulator and clock \$10.00

Flush Type Clock ..... \$3.50

Instrument Board without equipment ..... \$1.25

PLANT MORE ONIONS

Written for California Cultivator

By D. F. Reichard

**F**ROM our observations it would seem that onions are being a little neglected in a planting way. True, the price has not been as high as last year, but the returns have been satisfactory and the prospects are that they will be good next fall when the harvest is on. Onions are a crop that can be grown profitably in a small way or on a large scale. They may be grown on a variety of soils, but for best results a rich, friable sedimentary soil that retains moisture should be selected. If the soil is heavy and inclined to pack an extra amount of cultivation will be necessary to keep the surface loose to allow for free expansion of the bulb. If the soil is very sandy there must be frequent irrigations to keep the moisture near the surface.

Onions are grown from seeds sown directly in the field; from transplanted seedlings and from sets. At this season of the year it is advisable to plant the seed directly in the field where they are to grow to maturity. Use two and a half to three pounds of seed to an acre. Be sure the land is thoroughly worked up and fined well. Thin out when the plants are six to eight inches high to three or four inches between the plants. Keep the soil thoroughly cultivated and the weeds out. A few days' delay in weeding may ruin the whole crop from the weeds crowding out your onions. When irrigation is necessary to keep up unretarded growth run the water in furrows between the rows. Cultivate as soon as the soil is dry enough that it does not stick to the tools.

Onions are ripe and ready to pull when the tops turn yellow, dry up near the bulb and fall over. If they are grown on moist land the crops should be harvested at once as the moisture will soon start the bulbs to growing again, but if on dry ground the onions may be harvested more leisurely provided too hot weather does not prevail which might blister them. Plant Yellow Globe Danver, Australian Brown and Silverskin during March for best results.

**TRACTOR DEMONSTRATION**

The University of California has undertaken to conduct tests of tractors as to actual drawbar horse power and short turning ability in plowed ground as well as on ordinary surfaces at the Davis farm school demonstration, April 17-19. These tests will be conducted carefully and scientifically, and though they will not be compulsory upon all exhibitors, those exhibitors who submit their tractors to these tests agree that the results may be made public through the university. These tests have been recommended by the Society of Automotive Engineers and will be under the direction of Professor Davidson, who is a prominent member of that society. Following the 1917 tractor demonstrations in the East and Middle West, there was a widespread demand for some tests of this nature and as a result of their adoption for this demonstration, it will be visited and watched with close interest by some of the leading international figures in the tractor world.

The university farm school has declared open house for the period of the demonstration and will provide eating and sleeping accommodations to the limit of its facilities in the university dormitories and dining rooms and

in the hotels and private homes of the town. Many of the visitors will, of course, prefer to make their headquarters in Sacramento, as the demonstration field is only about 15 miles—a little over a half-hour's ride by auto, train or jitney—from the hotels of the capitol city.

**FARM INVENTORY VALUABLE**

An inventory is an itemized list of all property connected with the farm business, with its value. It will of course vary from year to year so it is necessary to take an inventory every year. The amount invested in different parts of the business will vary as stock and crops are being raised and sold at various times. An inventory is worth many times the effort it requires since it enables one to know the amount he has invested in livestock, buildings, machinery, feed, land, etc. year after year.

The time to take the inventory is largely a matter of choice but by all means it should be taken some time between January 1 and May 1. A tenant may want to take his at the time he is changing farms, which would be about March 1. Most of the feed has been fed and the marketable

livestock sold by March so this would doubtless be as good a time as any and work is usually slack at this time of the year.—L. F. Garey, Colorado Agricultural College.

## The Cultivator Patterns

8180

8209

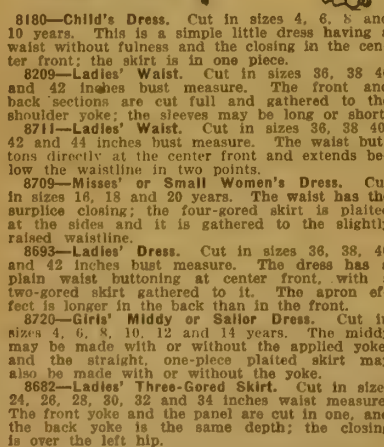

8711

8709

8693

8720

8682

8180—Child's Dress. Cut in sizes 4, 6, 8 and 10 years. This is a simple little dress having a waist without fulness and the closing in the center front; the skirt is in one piece.

8209—Ladies' Waist. Cut in sizes 36, 38, 40 and 42 inches bust measure. The front and back sections are cut full and gathered to the shoulder yoke; the sleeves may be long or short.

8711—Ladies' Waist. Cut in sizes 36, 38, 40, 42 and 44 inches bust measure. The waist buttons directly at the center front and extends below the waistline in two points.

8709—Misses' or Small Women's Dress. Cut in sizes 16, 18 and 20 years. The waist has the surplus closing; the four-gored skirt is plaited at the sides and it is gathered to the slightly raised waistline.

8693—Ladies' Dress. Cut in sizes 36, 38, 40 and 42 inches bust measure. The dress has a plain waist buttoning at center front, with a two-gored skirt gathered to it. The apron effect is longer in the back than in the front.

8720—Girls' Middy or Sailor Dress. Cut in sizes 4, 6, 8, 10, 12 and 14 years. The middie may be made with or without the applied yoke, and the straight, one-piece plaited skirt may also be made with or without the yoke.

8682—Ladies' Three-Gored Skirt. Cut in sizes 24, 26, 28, 30, 32 and 34 inches waist measure. The front yoke and the panel are cut in one, and the back yoke is the same depth; the closing is over the left hip.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH.

### HOW TO ORDER PATTERNS

Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2 cent) stamps for each number. In order to furnish our readers with the very latest New York City styles, all pattern orders are filled in New York City. Therefore, we promise to deliver all patterns ordered within two weeks; we guarantee safe delivery of all patterns. Address

### THE SERVICE FLAG

It hangs below the Stars and Stripes,  
A banner bright and new,  
Red-bordered with a field of white  
And stars of deepest blue.  
However humble is the home  
O'er which its colors wave,  
It glorifies it with the light  
That shines upon the brave.

For where the new-born emblem flies  
A man has buckled on  
The sword in Freedom's sacred cause,  
And from the house has gone  
To face the trinity of death  
In lead, and steel, and gas;  
So when you see the service flag  
Salute it as you pass.

—Minna Irving.

### EVER TRY WHISTLING?

When you find yourself a-trav'ling out  
Upon a lonesome road,  
And your back begins to weaken as you  
Struggle with your load,  
And the evening shadows lengthen way  
Ahead and all about,  
And you feel almost discouraged, and  
In fact just down and out,  
Ever try whistling?

When the eventide approaches, after  
Hours of honest toil,  
At your home the meal's belated, not a  
Thing's begun to boil,  
And your inside information urges loud  
It's time to eat,  
And you are so agitated that you can't  
Keep off your feet,  
Ever try whistling?

When the monthly bills have reached you  
And you feel so very lank,  
Just because the situation finds no balance  
In your bank  
And besides there is a limit to your  
Credit, as they say,  
And the prospect for tomorrow is no  
Better than today,  
Ever try whistling?

—Chas. Alexander in Citizens Advocate.

### BALLYSHANNON

**B**ALLY took to the life like a true Irishman—the harder the knocks, the more desperate the fighting, the better he liked it. What he didn't care for was the enforced marches in retreat.

For six months or so Bally served his master and the French troops, a faithful messenger. He weighs about 170 pounds but for a big fellow he is splendidly lithe and sinuous and able to get very easily where man dare not follow.

They say that when the regiment to which he justifiably belonged was ordered to Ypres, Bally was the happiest and lightest-hearted member of it. This proves that even a dog does not always know what is coming to him. For Ypres was destined to be a dangerous if not fatal field to Bally. In the first action in which he was employed a heavy cannon thrown off its carriage rolled over on Bally and crushed him to the earth. There the Huns found the dog, and seeing that it was still alive they carried him in to their lines.

For the first time in his military career Bally was a prisoner, helpless and apparently near death. At least the Germans so considered him, and the next day they thrust the crippled animal back into the French lines. There at least he might die among friendly faces.

But Bally wasn't to be so quickly killed. A surgeon examined him and a nun took an x-ray of his bent and contused ribs. They were not broken, and as his master was returning to Ireland to nurse a shattered arm he took the dog along to get well in his native air.

Bally's worst adventure was to come, and shortly. Off the coast of Ireland the ship was torpedoed by a submarine, and but three of those on board escaped with their lives, a sailor, a New York man named Maloney, and Bally. The three supported themselves in the water by clinging to a plank, and when they were finally picked up and put ashore in Ireland, Mr. Maloney was so penetrated with admiration of the superb courage displayed by the dog that there being

nobody else to claim him, he adopted the animal as his own and brought him to New York.

That was last May. Bally, still almost unable to walk, was taken by his new master up to Central Park, and put in charge of Tom Hoey, who has been shepherd there for a score of years. For 17 of these Lady Dale, an Airedale, has assisted Tom. It is a question which was the more pleased by Bally's advent, Tom Hoey or Lady Dale. Both welcomed the Irish wolfhound heartily, but with Lady Dale it was a case of love at first sight.

Since then Bally has lived in what ought to seem like a canine paradise. The shepherd, acting for Mr. Maloney, doctored and fed him medicine and food most calculated to restore his strength, while Lady Dale saw to it that in his exercise he should see all her favorite haunts in the park.

A safe and pleasant life, Bally ought to be content to lead it, but he isn't.

"The dog's that restless at times," said Tom Hoey, "that I fair believe he wants to be going back to the wars. It will be a sorry day for Lady Dale if he does, for that Airedale is in love with him if ever one dog was with another."—New York Sun.

### BEANS

Here are some bean recipes from Ohio. Try them out.

California is the biggest producer of beans in the United States, as you will note in reading the leader article in this week's Cultivator. In fact she produces nearly as many as all the other states put together.

And beans are good eating, nutritious, palatable and satisfying and, especially if we raise them ourselves, inexpensive. We are all looking for new foods and new ways of using the old and inexpensive ones, so these recipes will be welcomed.

### Boiled Beans and Tomatoes

Three cups cooked navy beans, one cup canned tomatoes, one tablespoon minced parsley or celery if desired, two tablespoons drippings, one tablespoon minced onion. Salt and pepper to taste.

Add tomatoes to beans and boil one-half hour. Cook onions and other seasonings in the drippings, add to the beans.

### Bean Polenta

Four cups cooked white beans, one and one-half tablespoons molasses, one-quarter teaspoon mustard, one-eighth teaspoon pepper, two teaspoons vinegar.

Drain the water from cold boiled beans, mash them fine, and mix with the other ingredients. Form the mixture into cakes and brown on both sides in hot greased pan.

### Bean Loaf

Two cups cooked beans put through food chopper, two cups soft bread crumbs, one-eighth cup chopped onion, one stalk celery or one-half teaspoon celery seed, four tablespoons bacon fat, two tablespoons flour, one-half cup water.

Melt two tablespoons of fat in a frying pan, add the bread crumbs, stirring well until mixed with fat, and add to the ground beans. Cook onion in remaining two tablespoons of fat, and add flour and water and boil. Add to mixture and make into loaf. More bread crumbs may be needed. Bake until nicely browned. Thin slices of bacon placed over top of loaf while baking are an addition. May be serv-

ed with tomato sauce or bacon gravy.  
**Jungle Stew**

One and one-half cups kidney beans, one-half cup macaroni or rice, one cup tomatoes, one onion, four tablespoons drippings. Seasoning to taste.

Wash and soak beans over night. Cook until tender. Brown sliced onions in frying pan with drippings, add to stew with tomatoes, seasoning and the macaroni, broken into bits. Cook until macaroni is well done.

#### PORKLESS DAYS

Ralph P. Merritt, federal food commissioner for California, writes us that the food conservation program for California has been revised with regard to porkless days.

"Porkless" Saturdays eliminated, for a period of 90 days. Hereafter all pork products may be consumed by the public, served in public eating places, such as clubs, hotels and restaurants, and sold by butchers, grocers and trades handling it on Saturdays.

"Porkless" Tuesdays will be observed as in the past with modification. Pork to be conserved under the new definition for the next 90 days means ham, bacon and lard and other cured pork products only. Fresh pork, sausage and trimmings may be sold and consumed as desired on Tuesdays.

All restrictions on the consumption of mutton and lamb have been removed in California temporarily.

The observance of one meatless and one porkless meal each day has been suspended indefinitely.

The new rulings were made primarily because of a present adequate supply of meats and fresh pork products for shipment to the Allies; to encourage hog production in California and in order that the conservation program for the present could be concentrated on the saving of wheat products. The wheat saving program remains unchanged. Mondays and Wednesdays to be wheatless, with at least one wheatless meal, the evening meal, each of the other days.

#### VALUABLE HOUSEKEEPERS BULLETIN

Amongst the valuable matter sent out by the government these days we may refer to two just issued farmers bulletins, 565 and 807. No. 565 is "Corn Meal as a Food and Ways of Using it." There is discussion of the value of corn meal, methods of milling it, selecting and care, uses and general discussion of cooking, then a long list of recipes for corn meal breads, hoe cakes, corn pones, sweet milk corn bread, corn muffins with dates, and even Indian meal doughnuts, with, of course, all kinds of puddings. No. 807 is "Bread and Bread Making in the Home." There are 26 pages given to the discussion of bread making. It is worth the asking. Write Division of Publications, Washington, D. C. for either of these bulletins which will be mailed free on request.

#### SAUSAGE IN BRINE

Stuffed sausages may be kept for several months if placed in a mild brine for four or five days (seven parts saturated brine and three parts water). Rinse and smoke six or eight hours. Hang in a dry airy place.

All stuffed sausages that are to be kept for some time may be kept from molding or becoming too dry if the cool sausages are dipped in melted paraffin or painted with the melted paraffin.

#### "SAVE THE WHEAT" RECIPES

Written for California Cultivator  
By C. A. S.

##### Rice and Corn Bread

One pint white corn meal, one cup cold cooked rice, one teaspoon salt, two teaspoons baking powder, three eggs, one tablespoon melted shortening, one and one-half cups milk. Sift dry ingredients together, and add eggs well beaten, fat, milk and rice. Beat together, pour into shallow well greased tin and bake in hot oven 30 minutes.

##### Rye Griddle Cakes

Two cups rye flour, one cup wheat flour, three teaspoons baking powder, one teaspoon salt, one pint milk, two eggs. Sift flour, salt, baking powder together, add milk, then eggs well beaten. Beat well and cook at once on hot griddle.

##### Oatmeal Sticks

These save crackers when served with soup.

Three cups oat meal mush (or rolled oats mush), three cups flour, one teaspoon salt, one tablespoon sugar, three teaspoons baking powder, three tablespoons of fat. Sift flour, salt, and sugar together, rub in fat, work this mixture into the mush forming a smooth dough. If necessary add a little milk or cold water to mush. Roll into sticks the length and thickness of a lead pencil. Bake ten minutes in a hot oven.

##### Hominy Bread

Mix together a pint of soft boiled hominy, one teaspoon salt, two tablespoons melted fat, four beaten eggs, two cups milk. Sift one cup flour and two teaspoons baking powder together; add to batter. Add a little more flour if necessary to make batter that will just drop from a spoon. Beat well; bake in shallow tin in very hot oven.

##### Mixing Flour

Conservation flours can be mixed in the following proportions and used according to the old standard recipes for raised or baking powder breads, cakes, pies, etc. The flours should be sifted together first of all before making anything. Except oats and corn which should be scalded. Four quarts wheat to one rice flour. Three quarts wheat to three-quarters oat flakes. Two quarts wheat to one corn meal. Smaller measures in the same proportion.

##### Conservation Yeast

The conservation bread recipes all call for "compressed yeast," something which the farm woman usually cannot get fresh, therefore must go without. Here is a home made yeast just as quick. It is also easy and economical:

One cup potato parings, one quart cold water, one-half cup of old yeast (one yeast cake the first time to start). Boil the parings in the water. Add when lukewarm the old yeast or the yeast cake dissolved in half a cup of lukewarm water. Set in a warm place until it foams on top. Then put into a sterilized one-half gallon fruit jar and set in a cool place. Strain through sieve before using to keep out potato skins.

##### Liberty Bread

Put two tablespoons of sugar, one of salt, two of lard into a mixing bowl. Add one quart of conservation yeast. Have ready three quarts of any of the flours mixed in the proportions given above. Stir in flour until too thick to stir longer, then turn out on the moulding board and mould in the remaining flour, making a smooth stiff dough. Flours differ as to how much wetting they require, and you may not need quite all the flour measured out, but make it stiff as it will soften in rising. Put the dough into a bowl which it not more than half fills. Cover with tin pan and set in a warm place till it doubles in size. Make into loaves. Let rise again until the loaves double in size, then bake.

To give pastry a brown, shiny finish, beat an egg into about a teaspoon of water until both are thoroughly mixed; brush on pastry before putting in oven.

All some folks seem t' care about th' war is that they don't have t' go.

**Great Majestic**  
*The Range with a Reputation*

**Two new features!**  
Labor saving—beautifying.

Famous as a sure baker and fuel saver, the Great Majestic now adds to its reputation as a work-saver.

The new burnished blue polished top does away with the work and muss of "blackening". This isn't a temporary finish—it is burned into the iron.

The new smooth nickel trimmings are riveted on from the inside; yet the inside is perfectly smooth; no bolt-heads or nuts either inside or out to catch dirt or get in the way. Majestic riveting also holds the nickel permanently tight.

These two features, added to the Majestic unbreakable malleable frame and rust-resisting charcoal-iron body, make the Majestic, more than ever, the most economical, convenient and satisfactory range to own.

One quality; many styles and sizes; with or without legs. There is a Majestic dealer in every county of 42 States; if you don't know of one near you, write us.

**"RANGE COMPARISON" FREE.** If you want to make sure of getting good value, send for our booklet. It tells what to look for in buying a range.

# Pioneer Roofing

## "California's Best"

WHEN California sets out to do anything she makes the Nation sit up and take notice. California produces the best oranges—the best figs—the best olives—and lots of other "bests."

So when we say that she also produces the best roofing it is merely backing up California's reputation for doing things better.

## A 30 Year Record

The factory that makes "Pioneer Roofing" started in a very small way back in 1888. The excellence of the product quickly earned a good name and good business. So the reputation and the business both grew. Today, Pioneer Roofing is sold all over the West and in a number of Foreign countries; the factory covers nine acres.

The men that make Pioneer Roofing are experts. They know that a reputation of 30 years depends upon them and that every roll must be uniform in quality—and we back up their ability with a guarantee.

## For Every Kind of Building

You will find Pioneer Roofing admirably adapted. It is also the best roofing to use for repairs. Use it on sheds, barns, silos, chicken houses, as well as on your home. It always gives satisfaction.

## Ask Your Dealer

There are dealers almost everywhere that sell and recommend Pioneer Roofing, but—should your dealer not be able to supply, DON'T take a substitute but write us for samples and booklet, and we'll give you the name of a dealer who WILL supply you.

Cranberry ..... 12.50  
Teparies ..... 10.50

RICE

Agreement between the growers and millers of rice and the food administration, prices for California rice have been fixed as follows Paddy rice, \$4.10

per 100 pounds to the growers; cleaned rice, \$7.10 per 100 pounds from the mills to the trade, and \$8.00 per 100 from jobbers and wholesalers to the retailers.

HAY

Under date of March 9, Scott, Magner & Miller says:  
Receipts past week amounted to 1157 tons. Consumers are buying only for their immediate needs, the general opinion being that the market is not likely to take on any decided change one way or the other. So far as can be determined all of the stocks now held in the country will be used prior to the receipt of new crop. This, however, cannot be determined definitely as every shower of rain in different localities brings out a little more hay from farmers' barns that was being held against the possibility of no rain. This surplus of hay, known to the trade as the invisible supply which cannot be figured on definitely, sometimes amounts to a great deal more stock than one would have any idea of.  
Fancy Wheat Hay  
(light 5 wire bale) ..... 30.00@31.00  
No. 1 Wheat or Wheat and Oat Hay ..... 28.50@30.00

Prices in round lots, lb.:  
Millet, recleaned ..... 4 1/2 @ 5 1/2  
Alfalfa ..... 20@21  
Flax ..... 6@6 1/2  
Hemp ..... 4 1/2 @ 5 1/2  
Rape ..... 2 1/2 @ 3

Citrus Fruit Market

Los Angeles, March 13, 1918.

No picking has been possible for several days because of the storm. The supply in Eastern markets is very light and prices are soaring even above those which have prevailed earlier in the season. Some spectacular sales close up to the \$8.00 mark have been made. Some seedlings and other than Navel fruits have held around \$5.00. Valencia's will be in the market very early.

Lemons are likewise very strong shipments.

Shipments

Shipments of oranges from Southern California to date since November 1, 1917: 3725 cars; lemons, 1290; total, 5015. To same date last season: Oranges, 11,163; lemons, 2161; total, 13,324. From Central California to date: Oranges, 1897; lemons, 109; total, 2006. To same date last season: Oranges, 4038; lemons, 161; total, 4199. From Northern California to date: Oranges, 202; last year, 842.

AT THE AUCTIONS

March 6  
New York: 8 cars oranges, 1 lem. Nav. \$3.70-\$6.10, Tang. \$3.30-\$3.50. Bloods \$2.70, lem. \$7.50.

# Wade's Drag Saw More Than Pays for Itself in One Season

## —saws 25 cords in a day

HUNDREDS of WADE Gasoline Drag Saws are making light work of sawing logs into short lengths for farmers all over the West. It is the most popular farm machine that has ever been put on the market, because it is a big time, labor and money-saver. The initial and upkeep costs are almost nothing when compared to the immense savings it makes for you in a single season.

The New 1918  
Model of the  
**WADE**  
DRAG SAW  
is Now Ready

All 1918 Model Wade Drag Saws are to be equipped with our new improved 4 H. P. ENGINE—we have INCREASED the HORSE POWER of the engine WITHOUT INCREASING THE COST. This 4 H. P. Engine gives you an abundance of power and, therefore, a greater output per day—be sure to get a WADE—accept no substitutes.

The WADE is made of the best materials throughout, and the whole machine is constructed for hard work in the woods — practically never gets out of order, and is always ready for use. The husky little 4-H. P. engine used on the Wade fairly hums the 6-ft saw through your toughest logs. (Larger saw blades on special order.)

Wade's  
Gasoline Wood Saw  
(Portable)

**\$165** DELIVERED  
Anywhere in the U.S.A.  
1918 Model with 4 H. P. Engine

One man can move the WADE along the log, while two men can easily move it from log to log. It weighs only 285 pounds complete. The WADE is especially low in upkeep cost and gasoline used—the tank holds two gallons (enough to cut 16 to 20 cords). It is the cheapest, easiest, fastest way for you to saw your logs.

## Does 10 Times the Work of 2 Men!

Think of it! TEN TIMES as much as two men can do! The WADE will easily cut 25 cords of wood in one day.

Can you afford to pay for slow, expensive day labor when you clean up with a WADE the same amount of work in one-tenth the time?

Fuel and labor are higher than ever before—and present conditions indicate that they will continue so for a number of years—get a WADE Drag Saw and keep your labor costs down and sell your wood while it is high in price.

A good many WADE Drag Saw owners are making good money by helping their neighbors saw their wood.

Send today for this interesting booklet, "How Dan Ross Saws Forty Cords a Day." Dan Ross lives at Corbett, Oregon, and has used a WADE Drag Saw ever since they first came out. You will profit by reading his experience.

## Dairy Made Butter

One of California's Most Practical Dairy Product Handlers, E. H. Hagemann, Writes for Cultivator Readers of Best Conditions of Cream and Best Methods of Home Making of Butter

GOOD butter can be expected only to be produced from good cream. Milk given by healthy cows will nearly always, when properly milked and handled, yield good cream, that is, cream

possessing a sweet and agreeable taste and odor. If through carelessness or lack of understanding of the requirements, the milk and cream are not produced and cared for properly, the cream will usually acquire bad flavors which cannot be removed and which go directly into the butter. Bad flavors may be caused by certain materials consumed as food, such as onions, cabbage, turnips, rag-weeds and spoiled feeds, or by cream absorbing odors of stables, cellars, kitchens, etc.; but by far the greatest source of bad flavors is through the growth in milk or cream of bacteria introduced into the milk by dust settling from the stable air or small particles of dirt or manure falling into milk pail from the cow. Many more are introduced by old and carelessly washed milk utensils.

Brushes are to be preferred to rags for use in washing dairy utensils because they get into the corners much better, and rags invariably harbor and carry bad flavors and bacteria. All utensils should be washed clean, scalded and allowed to dry in the sun if possible. Mineral or soda washing powders are to be preferred to soap for cleaning utensils.

Time, equipment and conveniences are often lacking in the farm dairy, and while the necessary equipment and conveniences should be at hand, it is not necessary for them to be elaborate for the production of good cream and butter, if one has the understanding of the care necessary and proper time at which the work of churning, etc., is to be performed.

### Milking and Care of Milk

Milking should not be done just after handling hay or bedding, or when the stable is full of dust or bad odors from any cause. Milking should only be done with clean dry hands; milking with wet hands dipped into the milk is filthy. The milk should be removed from the stable as soon as possible after milking to a clean, cool, airy place, free from dust, flies and odors. If cream separator is used the work of separating should be done as soon as possible after the milk is drawn and the cream cooled directly from the separator. If milk is set in pans it should be given preliminary cooling by setting can with milk in cool water for a while, during which it should be stirred to remove animal heat, and then poured into the pans, as pan setting of milk ordinarily takes too long for cream to rise to get good quality.

Precooling the milk before setting is important to have the cream rise for skimming as quickly as possible. Pan skimming should be done before

the cream gets too old and sour; it should not be left longer than 24 hours. Pan raised cream should be stirred a little after each skimming so it will have a well mixed appearance, free from lumps, and kept cool till ready to churn. Too much milk should not be skimmed with the cream as very thin cream is one of the causes of butter not coming. A cream should be skimmed that will test about 35 per cent butterfat.

### Ripening the Cream

Holding the cream too long before churning, causing it to become old and sour, is the cause of more bad flavored butter than any other thing. Do not think because there is a small amount of cream it is not necessary to churn more than once a week, but aim to churn at least two or three times a week, or while the cream has yet an agreeable milk acid flavor instead of a very sour old taste.

For holding cream have a regular can fitted with a cover through which the handle of the stirrer may project. The second can should be smaller,

commercial starter or by selecting several samples of milk in perfectly clean quart jars and allowing it to sour. Select the one that shows the most solid curd and the cleanest flavor for your starter. Mix this with the desired amount of selected whole milk from a cow that is giving the most milk or from a cow that was recently fresh, and allow this to stand at a favorable temperature for a short time or until it is sour enough to use in the cream.

### Churning

The barrel churn, which is made in different sizes, is a very popular churn for farm butter making. The churn should be kept in a sweet and clean condition and should be rinsed with cold lime water just before cream is put into the churn.

Lime water is made in the following manner: Slack eight or ten pounds of fresh lime in ten or twelve gallons of water, stir thoroughly; then let stand over night to settle, and use the clear lime water from top of vessel, when water can again be added

too soft or too firm when ready to be worked.

### Salting

When all the wash water has drained off close outlet of churn and evenly sprinkle the salt over the surface of the butter at the rate of one ounce of dairy salt to one pound of butter. Then sprinkle equal amount of water to salt in weight over the salt and butter in churn, and mix butter, salt and water with butter spade or ladle. Close cover of churn tightly and revolve churn slowly about ten times and allow it to remain in the churn with the water and salt solution about ten or fifteen minutes before working. A certain amount of water must be present in the churn with the salt, as the water dissolves and is a distributor of the salt, otherwise there is danger of streaks in the butter and uneven coloring. One gallon of cream testing 30 per cent should make from two and one-half to three pounds of finished butter. Therefore the amount of salt to use can be estimated very closely; also one should never fail to judge his product by taste.

### Working

For large dairies the combined churn and worker is the best, while for the smaller the V shaped lever or square shaped roller workers give good satisfaction. For very small amounts the butter can be worked in a butter bowl by means of a ladle. Working should be done by pressure instead of by rubbing or sliding of the ladle or lever over the butter, turning the outer edges of the butter over to the center after each operation, until the butter has a smooth compact appearance. It should not be gritty with undissolved salt and when cut into with a stretched wire should have a uniform color and not appear streaked.

### The Package

Put the butter on the market in a package that is neat and attractive. The one-half, one and two pound block prints, wrapped in parchment wrappers, with a neat design of name of dairy and maker printed on outside of wrapper or carton, are neatest in appearance. Neat butter molds of different sizes for printing butter can be secured from all dairy supply houses.

### Emergency

If the flavor of the cream for a churning for some reason cannot be controlled and develops a strong rancid, old or very sour taste, mix thoroughly with a little water one-half to one teaspoon of common baking soda, and add per gallon of cream. The soda will neutralize the excess acid in the cream and partly overcome old flavors. Stir thoroughly and allow to stand 15 minutes. Add starter as per directions and in from two to three hours the cream will be ready to churn. If starter is not at hand, add one pint of fresh sweet milk, or half starter and half sweet milk, but starter is to be preferred.

### ONLY AMERICA CAN HELP

"Our position is critical, particularly until the next harvest, but the United States can save us.  
"You Americans have the men, the skill, and the material to save the Allied cause."

—Sir Joseph Maclay, British Shipping Controller.

but of size sufficient to hold all the cream of one skimming. Cool the cream in this can before pouring it into the large can. All cream intended for one churning should be mixed together and held not less than three hours at churning temperature before churning takes place.

### Use of Starters

The value of starters in butter making cannot be overestimated, either on the farm or in the well equipped creamery. While butter can be made without a starter, it cannot be made as uniform in quality. To make the starter, whole milk or skim milk can be used. Take a certain amount of either, depending on the amount of cream to be churned, one pint of the starter to gallon of cream or one gallon of starter to ten gallons of cream, or about ten per cent. Place this milk in a sterilized covered vessel where it can be kept at a temperature of 75 to 85 degrees Fahrenheit. It should coagulate or become clabbered in from 18 to 24 hours, and should be ready to use and be mixed with the cream not less than two or three hours before churning. A starter is good when the coagulum or clabber is solid, without gas or airholes throughout the mass, and has an agreeable acid taste.

It is sometimes impossible to obtain a good starter from the mixed milk of the herd. This is especially true in the fall or when a number of the cows go dry. In that case better results can be obtained by using a

each day, stirred and allowed to settle, which will last for several months, making a new supply when it loses its strength.

Strain the cream into the churn when the cream is the right temperature. What that temperature should be must be determined for each farm. It should be such that with the churn not more than half full the butter may be churned in 30 to 35 minutes, which varies with the season: summer, 52 degrees to 58 degrees Fahrenheit; winter, 58 degrees to 64 degrees Fahrenheit.

The cream during ripening should be maintained at such a temperature that it will not be necessary to change the temperature many degrees to bring it to the required temperature for churning. The churning should stop while the butter granules are small, about the size of wheat grains, when the butter should be drawn off.

### Washing

When the butter milk has all drained off, sprinkle cold water over the butter without revolving the churn, until the water runs out quite clear, then close the outlet and add as much water as there was cream in the churn. Close the cover and revolve the churn 15 or 20 times at the same speed as for churning and allow the water to drain out thoroughly. The temperature of the wash water should be about the same as the buttermilk. It may be necessary to have the wash water a little warmer than the buttermilk in the winter and colder in the summer. The butter should not be

## Value of Manure

Written for California Cultivator by W. H. Kaufman

IN a recent issue of the Cultivator is a very suggestive article concerning the value of manure. This subject is of enough importance to warrant our thinking clearly about it.

The value of manure is equal to the value of the extra crop it will produce less the cost of application. This at once opens a long list of contingencies: How much will it increase the yield in pounds? What will the crop be worth per pound? To say that a ton of manure has so many

pounds of nitrogen; that this equals so many pounds of a given nitrate, and that this particular sort of nitrate costs so many cents per pound—all this gets us nowhere, for possibly our particular field does not need nitrate. A ton of manure is worth as much as a hen, and it all depends on what sort of manure and what sort of a hen! To give a fixed value to horse manure, hen manure, and so on, is useless.

Some years ago I wrote to several experiment station superintendents and also to the department of agri-

culture at Washington, asking whether it would pay me to haul out peat on my field. Every answer discouraged the plan; most of the answers stating that peat had little plant food. Not being willing to accept this consensus of opinion I hauled out many loads of peat, spreading both peat and barnyard manure on large areas and also using much chemical fertilizer. I could see no difference between the peat and the barnyard manure, but could see no result whatever from chemical fertilizers. This proved that my soil did not need chemicals but did need humus. Before anyone can give a sensible answer as to the value of manure he must know three things:

First: What crops will be raised on the field during the term of years which the manure will affect the crops.

Second: What will be the selling price of those crops.

Third: How much a ton of manure will increase the successive crops.

Ten tons of manure per acre on river bottom lands, to be cropped to oats, will cost the farmer \$40 per acre, will damage his crops that much the first year by causing the oats to fall down. I suppose it is a conservative estimate to say that ten tons of manure per acre on oat land, rich river bottom land, would mean a total loss of considerably over \$100 per acre (during three to five years); say \$10 per ton. On my particular fields (a close clay) I would rather have a ton of straw than a ton of hen manure; on a light sandy soil the straw might be a positive damage, the hen manure very valuable. I mean to make it perfectly clear that there can be no definite, no fairly sensible answer to the question of the value of a ton of manure. It all depends on whether this particular kind of manure is adapted to the particular soil and the particular crop, and after that we must know just how great will be the increased yield during the term of years and what the price of a unit of that crop may be.

For some 12 years I have specialized in field peas. My land needs humus; so I plow under the vines. I might feed the vines, but they would not be worth as much when turned to manure, for I want not immediate plant food, but humus, and straw lasts longer than manure. Last year I had something like 125 acres of peas, say 150 tons of pea straw. This keeps my soil increasingly fruitful. The 12 years' cropping has left my soil much better than when I began. From some of this land I will sell over \$600 worth of peas from last year's crop, after 12 years' cropping, without rotation or commercial fertilizer or barnyard manure, simply pea straw.

Peas will yield about 20 per cent to 25 per cent more pounds of grain than will oats; and on an average year peas are worth about three to five times as much as oats per pound; and also peas will continually fertilize the soil, while oats will deplete the soil.

My farm is upland; an alder bottom with from eight to 18 inches of soil, then a yellow clay subsoil. As the soil is very rich, tilth is more important than any other one factor; and straw humus, or straw just before it becomes humus, is very desirable.

I found that a ton of average horse manure from city stables, planer shavings bedding, brought me the first year about a half ton additional potatoes, apparently regardless of the amount applied. I have had on small areas, very heavily manured, over 40 tons per acre of marketable potatoes. The manure cost about a dollar a ton to haul (I brought back a load when I hauled farm products to town) and as the average price of potatoes on my farm was at that time about \$12, the manure was worth about \$5 per ton.

As dry pea straw is about as rich as barnyard manure (that is for peas on my land it is about equal), and as pea straw is all prospective humus, while barnyard manure is three-fourths water, I count pea straw as worth, ton for ton, four times as much as barnyard manure—for peas on my land. For other crops on other land it might be worth much less than

## What He's Doing and Why

"What are you doing there?" asks the fellow in the foreground, who is unhappy because his orchards are bearing poorly.

"I'm giving my trees a new lease of life," answers his prosperous neighbor whose orchards always do well. "I'm getting ready this fall for a bumper crop next year. I'm breaking up the ground around the roots of the trees with

## HERCULES DYNAMITE

"There's nothing like it to keep an orchard in the pink of condition—that is, nothing except planting in dynamited holes to begin with.

"By blasting holes between the rows of trees you shake up ground that you can never reach in any

other way. And how the roots do grow through it!

"If you have never tried this on your orchards it's time you did. Write today for the book, 'Progressive Cultivation', which tells all about it. It is sent free on request."

## THE SELF-OILING WINDMILL

has become so popular in its first three years that thousands have been called for to replace, on their old towers, other makes of mills, and to replace, at small cost, the gearing of the earlier Aermotors, making them self-oiling. Its enclosed motor keeps in the oil and keeps out dust and rain. The Splash Oiling System constantly floods every bearing with oil preventing wear and enabling the mill to pump in the lightest breeze. The oil supply is renewed once a year. Double Gears are used, each carrying half the load. We make Gasoline Engines, Pumps, Tanks, Water Supply Goods and Steel Frame Saws.

Los Angeles, Cal.

barnyard manure or much more.

Taking a broad average of soils, crops, prices, farmers and seasons, one might start with an estimate that manure is worth \$5 a ton, and then by experiment find out what it is really worth on his farm, with his soil, his crops, his prices. To get down to so fine a point as to say that oat straw is worth \$3.30 and wheat straw is worth \$2.58 is quite absurd. Such minute statements imply, and lead the novice to believe, that the author has scientific data as to what the novice's farm needs. For plant food the liquid manure is worth more than the solid. For humus the solid

is much more valuable; although the liquid manure will greatly add to the tilth of clay soils, thus having the effect of humus, although it really seems to be a chemical affair.

If for a given crop a given field does not need manure (as an oat crop on river bottom soil) manure may be a damage and no help whatever.

Let's get rid of the idea that farming is a cut-and-dried affair. There is no business or profession that requires more intense application than farming; and every farmer has to work out a system for his own particular farm. When he does this he will be a successful farmer.

## The Malaga Raisin Industry

Louis G. Dreyfus, Our Consul at Malaga, Spain, Writes of Spanish Method of Handling This Fruit.

THE two principal varieties of grapes grown in the Malaga district are the muscatel and the Pedro Ximen. Raisins and wine are both made here from the muscatel and wine from the Pedro Ximen.

The vines are not trained on arbors, but are pruned to form bushes that cover an area of about one square yard at harvest time. The vines are set out in rows ten feet apart. During the spring and summer they are carefully cultivated and sprayed with sulphate of copper to destroy insects. The grapes begin to ripen about the first of August. Laborers with large flat baskets or trays gather the fruit. It is not all cut out at one time, but the field is gone over periodically and only the ripe clusters are cut from the vine with scissors.

### The Drying Process

The raisins produced near Malaga are not treated with sulphur, lye, or oil, as is the practice in other parts of Spain. In or near the grape field there is thrown up an earth terrace inclined toward the setting sun. This is divided into sections about ten yards long and two yards wide, around which a low brick or stone wall is built, to protect the raisins and to support the canvas stretched over them at night or during inclement weather. The object of this slanting surface is to keep the sun constantly shining upon it. The bottoms of the drying beds are covered with fine gravel to retain the heat.

Immediately after being gathered, the grapes are spread out on the beds for exposure to the burning sun. At nightfall the raisins are covered with canvas to protect the fruit from the heavy dew, and, as stated, the canvas is also spread over them in the event of rain. There is rarely any rain in this section during May, June, July, August and September. During the process of drying the grapes that remain green or become spoiled are carefully removed, and the clusters are turned from time to time in order that they may color uniformly. The drying process takes about three weeks, so that the first raisins of the season are ready for packing about the end of August. Heaviest shipments go forward in September.

### Packing Methods and Materials

Before packing the raisins are sorted and graded. After small and imperfect raisins have been cut off the clusters are laid in boxes lined with white paper and containing usually 22 or 25 pounds of fruit. Good fruit which has become detached from clusters through shaking and raisins cut from small and irregular clusters are separated from the rejected fruit

and are also packed for shipment. The boxes of raisins are then brought to Malaga by the growers for disposal to the shippers and dealers. The prices realized vary considerably according to the quality of the fruit and the quantity of the crop, also according to the condition of the industry in the other countries where raisins are produced and the general demand in the world markets.

It is estimated that one-third of the raisins exported to the United States go forward in the original packing as received from the vineyard, the boxes being opened at Malaga for inspection and to replace the paper lining by a fancy paper dressing. The rest are repacked in one, two and five pound fancy cartons. There are two methods of packing raisins for export, the "French" and "English." The "French" method, so called from the fact that the fruit is packed according to the demands of French and Continental buyers, is to pack the raisins either in clusters or loose, just as taken from the drying beds and without manipulation or pressing. The "English" method is used especially for British and American markets. Under this method the raisins are pressed out between the thumb and forefinger (called in the trade "thumbing" or "facing") in order to flatten out the raisin to improve its appearance.

The boxes in which the raisins are packed are usually obtained under contract from box makers. They cost from 60 to 90 centimos each, and are usually made of pine imported from northern Spain. Foreign shooks have not succeeded in competing because of the difficulty of recovering the drawback when the boxes are exported. The wrappers and cartons are sometimes very elaborate lithographs. Formerly Germany supplied a large portion of the paper goods and ribbon used; at present these are mainly of national manufacture.

### THE THIRD LIBERTY LOAN

The campaign for the third Liberty Loan will be opened on the 6th of April, the anniversary of the declaration of a state of war between the United States and Germany.

The amount, terms, and conditions of the loan are dependent upon further legislation and will be announced as soon as congress has granted the necessary powers.

Secretary McAdoo chose the 6th of April as the day to open the campaign as the most fitting date to call for a patriotic response to the summons to duty to every American, to ask from the people at home the same fervent patriotism that actuates our gallant sons on the battlefields of France and on the waters of the Atlantic.

## Kill Squirrels Gophers

The only exterminator that is 100 per cent efficient and guarantees results or money back.

**KILMOL**  
SQUIRLEGOPHENE

It contains special chemicals. Kilmol fumes not only asphyxiate the squirrel or gopher, but eat away their lung tissues. Even should the animal reach fresh air, he can't survive. No other exterminator is as effective as Kilmol. That's why Kilmol costs a little more—but economy in labor warrants the advanced price. For best result use repaired waste balls saturated with Kilmol.

New formula of U. S. Government Poisoned Barley is effective in dry weather. Kilmol and U. S. Government Poisoned Barley are used and endorsed by the biggest and most successful ranch owners.

Remember, results guaranteed or money refunded.

Your local dealer carries Kilmol, Waste Balls and U. S. Gov't. Poisoned Barley.

# Lemon Trees

## There is a Strong National Demand for California Lemons

If you have available acreage suitable to Citrus culture, we strongly advocate the planting of Lemon Trees.

We have a fine stock this season of well-rooted, properly grown young trees on sweet and sour roots. Our Citrus Nursery is located where soil and climatic conditions are most favorable.

We use the greatest care in the selection of buds from trees showing the best type and continuous bearing habits.

### The Eureka Lemon

Medium size, sweet, smooth, glossy, abundant acid and very little rag. Popular on account of its heavy summer crop, maturing when Lemons are in great demand.

### The Lisbon Lemon

Medium size; sweet rind and strong acid; few seeds; an excellent keeper; fruit very uniform. Tree a strong grower, thorny, but thorns decrease as tree grows older. Very popular in the San Joaquin Valley. Very hardy and a prolific bearer.

### The Villa Franca Lemon

Oblong; rind thin, without any trace of bitterness; pulp acid, juicy, nearly seedless. A fine commercial variety.

### Illustrated Catalogue Mailed Free

This year's 96-page Catalogue contains some very interesting and valuable information on the planting, pruning and general care of Citrus Trees. Every grower should have a copy for reference.

## Dedication of Citrus Experiment Station

THE citrus experiment station buildings, located in Riverside, are to be formally dedicated, Wednesday, March 27, 1918. This exercise stands

as an official recognition of the establishment of a working branch of the college of agriculture, University of California, devoted to typical Southern California problems in agriculture.

The scope of the institution, as now organized, is broader than its name implies. Work of a fundamental nature is being undertaken, dealing with the various phases of soil and crop management, results of which will have a bearing on all forms of

the citrus experiment station may help to lead to the adoption of more permanent, better balanced, and more profitable practices. It is to this end that the buildings are to be dedicated.

### Program

9:30 A. M. Auditorium Polytechnic High School.—"Dairying as a Factor in the Citrus Industry," by Dean H. F. Van Norman, University Farm School, Davis; "Development of California Fruit Industries," by Prof. E. J. Wickson, former dean and director, College of Agriculture and Agricultural Experiment Station, Berkeley; "The Trend of Discovery in Evolution and the Utilization of Its Concepts," by Dr. D. T. MacDougal, director of the department of Botanical Research, Carnegie Institution, Washington, D. C.

Main Building Citrus Experiment Station

commercial plant production. For example, studies are already under way looking toward the determination of those practices of soil management that may be conducive to a permanent agriculture under local conditions, regardless of the crops grown. The adaptation and improvement of various field crops to meet the soil, climate and disease conditions of the surrounding territory is a function that will receive no little attention.

The efforts of the scientific staff, which are centered around the laboratories and field plots at Riverside, are by no means confined to these alone. Studies in all branches of the work, crop adaptation, disease occurrence and control, moisture requirements of crops, soil management, are undertaken in numerous locations throughout Southern and Central California to supplement the local work.

It is not expected that this institution will have a great effect directly in solving the problems of the individual farm. Such problems, so far as the college of agriculture can assist in their solution, will be handled through the farm bureaus and county agents. The investigations originating in this institution should, however, furnish the basic knowledge and understanding of agricultural facts upon which the solution of individual problems may be intelligently founded. Further than that, the farm advisers and the experiment station staff are all parts of one large organization and thus they will constantly be in sympathetic touch with each other.

Thus far the advance of agriculture in Southern California has been in accord only with temporary or immediate economic ends. Permanency of agriculture, as well as social, conditions has not entered greatly into the development. It is entirely conceivable, and sincerely to be hoped, that

2:00 P. M. Dedication Exercises, Citrus Experiment Station.—Dr. Thos. F. Hunt, dean and director, College of Agriculture, Agricultural Experiment Station, presiding; address, President Benjamin Ide Wheeler, University of California; "The Work of the Citrus Experiment Station," by Dr. H. J. Webber, dean and director; "Irrigation and Agricultural Control," by Dr. John A. Widtsoe, president, University of Utah, Salt Lake City.

7:30 to 10 P. M.—Public reception, director's residence.

Scenes at Citrus Experiment Station

## Legal Queries

Louis B. Stanton, attorney, 243 Wilcox Building, Los Angeles, will answer legal queries in this department.

Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When replies are wished in Cultivator address query to 115½ N. Broadway, Los Angeles.

### Debt Outlawing

How long can money due for wages remain unpaid before it outlaws?—Subscriber, Corona.

Unless the debt is evidenced by some contract or acknowledgment in writing the statute of limitations would run limit at the expiration of two years from the date upon which the laborer was entitled to receive his pay.

### Road

A sufficient petition for establishment of a road has been made to the board of supervisors; viewers have been appointed and have surveyed the road which has been traveled for over 50 years. Can a landowner now change the road from where it has been surveyed?—Subscriber.

The viewers are simply appointed

### Homestead Title

A man and wife take up a homestead claim and reside upon it until they prove up; then the husband mortgages it without the wife's knowledge. Is the property bound by such mortgage without the signature of the wife?—Subscriber.

Prior to April 27, 1917 the husband was entitled to sell or encumber the community property without obtaining the signature of the wife; therefore, if the mortgage was executed prior to that date it would bind the property. By amendment to the code effective upon the date mentioned the requirement is that the wife must join in any instrument by which the community real property is leased for a period in excess of a year, or by which it is sold, conveyed, or encumbered; provided, however, that such instrument although executed solely by the husband to a third person taking in good faith without knowledge of the marriage relation shall be presumed to be valid and that no action may be commenced to invalidate the instrument after the expiration of one year from the date of the recording

Somewhere in Arizona

Sod plowing with three-bottom 12-inch gang. Note even furrows and depth of plowing. The tractor is surely doing its bit in greater food production.

to make a report of the conditions to the board of supervisors. After the report is in the board must appoint a day for hearing the report and give notice of such hearing at least two weeks before the same by publication in a newspaper in the county. At such hearing the board hears all of the parties interested for or against the road and may thereupon declare the report of the viewers to be approved or rejected in whole or in part. Action by the board which would constitute an abandonment of such road as mentioned would doubtless free the land of the right of way for public use; such action, however, could not prejudice purely private rights.

of the instrument in the office of the county recorder.

### Contract of Minor

A boy 16 years of age who is living with me, but who is no relation, makes a contract for a course in a correspondence school. I also signed the agreement. Our signatures were obtained upon the representation of the agent of the school that the lessons were of such nature that even with the insufficient education which the boy then had he could readily understand them. He, however, after the first lesson found it was impossible for him to understand and so informed them. He had paid them \$25. They are now threatening suit. Can they recover against the boy or myself?—Subscriber.

A contract of a minor under the age of 18 years relating to any personal property not in his immediate possession or control is absolutely void. The school not only cannot recover on the boy's contract, but he can recover the \$25 which he paid. Upon proving the falsity of the representations made to induce the elder person to sign the contract, it is highly probable that a court would not give judgment against you, as book agents and correspondence schools are not in high favor, and the falsity of the representations would vitiate the consideration for the guarantee, if such was made.

### FARM BUREAU MEETING POSTPONED

The Pomona, La Verne, Claremont farm bureau center meeting scheduled for Pomona high school the 22nd has been put off one week—till the 29th.

Yucaipa Valley, San Bernardino County, is hoping for early establishment of a cannery.

# Save the Walnut and Orange Groves by Dusting

## With a Niagara Dusting Machine

This machine saved many groves last season by destroying aphids with Niagara Tobacco Dust mixed with lime. The "Niagara way" is the most successful method of destroying Red Spider. The Niagara is the greatest time and labor saving machine for destroying pests on the market. There is a Niagara Duster for every purpose. Write for descriptive folder and ask about Niagara Dusting Sulphur. The Niagara is endorsed universally. Save your crops easily and at little expense.

## The Farm Home

Written for California Cultivator

NO CLASS of home grounds may be made to appear as comforting and satisfying, at moderate cost, as those of the farmer. They would, as a rule, but have to harmonize with their surroundings. The up-to-date farmer knows full well the value of keeping his livestock comfortably housed and well cared-for. Therefore, the very foundation of the institution suggests shelter, protection, snugness, somewhat of seclusion, and above all, comfort; for the latter means dollars and cents to him and his, and must be

farms; and worked upon them, too, where every modern piece of machinery was obtained to further farm operations, but the wife still used a washboard on Mondays, old-style flat-irons on Tuesdays, a dasher churn on Wednesdays, and so on throughout the week. But this was not in California, and it occurred more than 30 years ago. Woman's lot is now much easier and as a rule in California her lot is as comfortable as that of any farmwife in this country. Further than this, we have some farm homes that are nothing less than superb; in fact,

Near Santa Barbara

An old-time home place where palms and other ornamentals have created a scene of wonderful beauty. Photo by California Nursery Company.

provided before he may be assured of lasting comfort for himself. What landscape designer of taste would ask for a more pleasing task than to plan home grounds to harmonize with such surroundings?

Yet it is with regret that we note many farmer's premises where every care is bestowed upon the four-footed beasts and their quarters and the latter are often somewhat attractive in

their superiors do not exist. Would that we could say as much for all.

But to return to the garden and the value thereof; should we not have the home grounds so attractive as not only to keep the boys and girls on the farm because of its comforts and conveniences, but to draw the friendly neighbor and even the leisure-loving passer-by? How about embellishment of home grounds from a cold-

Take Advantage of Circumstances

There is no reason why the farm home should not have as attractive setting, using a natural slope or any other help of nature to make the house look as if it "belonged" to its surroundings. Photo by California Nursery Company.

addition to their unquestioned sufficiency in general, yet the grounds about the residences are sadly neglected. Only that part from which a direct revenue is obtainable is given serious consideration. Calves have a more suitable place to play than children and I sometimes think that even the calves notice that they are of greatest importance; they hold their heads so high and look so "all-fired" proud. I am sure that the poor children often wish they had a nice green to gambol upon, but it is too often alfalfa for the cattle and bare soil or gravel for the children. I have seen

blooded business point of view? Do such investments pay? The man of means, looking for a rural home, preferring that to residence in a city; is he attracted by squalid surroundings, or does he search for a community or section where taste is displayed and the landscape made beautiful with trees and flowers? If your farm is neglected and your grounds unadorned those who settle about you will belong to the same class. If you and your neighbors beautify your home grounds and keep them well cared for, the home-seeker is assured of culture and refinement, for all know that the

love and care of plants and flowers has an ennobling and elevating influence. Surely he stated aright who said that: "the appearance without is an index to the character of those within." It rests with you as to how you will be indexed for these indexes are not necessarily costly. They are merely pages in the book you own and need but to harmonize with their fellows; but what kind of a book have you made for yourself? The world judges of the contents largely by the cover; see that it is well-designed and the design carried out in suitable colors. Then will the many come to buy and all will wish to look therein.

Let us not have our home grounds gaudy or garish. Let us consider first the uses and then all the comforts, conveniences and floral luxuries we may have consistent with those uses. Have roads and paths where needed, and none where not needed. Have them go reasonably direct from one point to another. This does not necessarily mean straight lines; neither does it mean many or abrupt curves. All should suggest ease and pleasure to either driver or pedestrian.

Plant trees primarily for shade; not for ornament alone. Backgrounds in mass plantation, for forest or wood lot effect, are always allowable and usually desirable, but do not overplant the

foreground with trees beyond the consideration of shade and shelter. Frame your picture with shrubs; that is their chief use. Also fill in the harsh right-angle formed by ground and house walls by planting a frame-work of shrubs against the house. Leave fine long views open, but blot out all undesirable views and unsightly objects with trees or cover such objects with vines if upon your own premises. Then make the whole picture bright with plenty of flowers in good colors. Now let us look to comfort also. Have one or more arbors, garden houses, seats covered or uncovered, a place to sling a hammock, a lawn upon which to lie as well as attractive to the eye. Unless near an ocean, lake, or large stream, a little pool of water with plants and fish is very attractive and interesting and the cost is small. A few vines on house and other structures will lend grace and beauty, soften the harsh monotonous lines of architecture and suggest shelter, snugness, and seclusion—a home-like atmosphere that cannot fail to charm. There; the farm home is complete, and satisfying, not only to your own family, but to all who visit it. And the cost? A mere trifle. The best investment you ever made; one that will grow in value with each succeeding year and with no additional cost.

## Roselle

Roselle has been grown in California but not to the extent it should be when the delightful acid, fine-flavored jelly it will make is considered. The Arizona experiment station has found it exceptionally well fitted for growing under Arizona conditions. The station issues the following regarding its culture:

The Roselle plant is an annual which grows easily in any soil. There are two varieties, an early and a late. The early variety should be sown, as there is great danger that the frost will destroy the late. The plants will mature earlier if the seed is started in paper cases and the plants set out as soon as danger of frost is over. The seed may be planted in the field, however, after the ground is warm. It should be sown four feet apart in the rows that are six feet apart. Cultivate it as you do okra. The plant grows rapidly and the pods should be ready for use by September. The pods

grow in the axil of each leaf and contain the fruit which is used for preserving.

In preparing jam or jelly the fruit is cooked with very little water until it is soft. It should be put through a colander to remove the seeds, then strained through a cheese cloth. The juice may then be used for jelly and the pulp for jam or sauce. Sauce made from the pulp of the Roselle plant is often substituted for cranberries as it has a tart flavor. The jelly and jam taste much like that made from currants.

The Roselle plant is grown extensively in Australia and the "Queensland Jelly" shipped in quantities to Europe is made in Australia from the fruit of this plant. The adaptability of the Roselle to soil conditions and the excellent quality of its products for food suggests that it may become very valuable in the Southwest as a substitute for the "small fruits" of which we have so little.

## Interesting to the Gardener

About the most instructive feature of any gardener's library is the seed and plant catalog of the modern day seed dealer. These catalogs have increased in scope until mere lists of plants are the least of their features. For instance, we have one before us in which nearly half of the page is given up to cultural suggestions for "A Big Home Garden"; then a quarter of a page is given to "A Few Words About Irrigating." A half of another quarter of a page is given to "A Word About Sowing Seed." Then in an inch or two is given "Lists of Seeds," and even there more or less of cultural directions. Another entire page is given to instruction as to how to make a hot bed, to the number of plants on an acre, and then to a list of agricultural books. Another entire page is devoted to "All Year Work Chart," and hardly a page in the entire catalog is given to exclusively advertising the goods of the house that puts it out. The modern day seedsmen are alive to the needs of garden-

ers and are furnishing a world of information.

### ORANGE COUNTY LIMA BEAN GROWERS

Lima bean growers near Santa Ana recently met at Greenville, Orange County, and discussed matters of co-operative market, building of warehouse, installing cleaners and perfecting an organization which would secure just returns to the producers. There is excellent prospect of organizing an association with not less than 1250 acres of beans represented.

In per capita ownership of automobiles California is practically at the head of all the states of the Union. While New York state has the largest total, with well up towards a half million autos, that state has less in per capita ownership, there being an auto for every 25 people, while in California there is an auto for every nine people. From this standpoint Iowa was ahead of California, with one in every eight in 1916, but it is estimated that this state has now passed her.

# Extra Tested

## To Yield You Extra Wear

Racine Country Road and Multi-Mile Cord tires actually do yield more miles of good service. The secret lies in the many Extra Tests to which these proved quality tires are subjected in the factories.

### RACINE Country Road and Multi-Mile Cord TIRES

are Extra-Tested throughout. Each of the Extra Tests adds extra value—months of extra wear—miles of extra service.

For instance: every inch of fabric that goes into the Racine Country Road tires, is lens-examined against flaw in warp or weave. This is the Extra Test for perfect fabric. Out on the road it shows its worth.

RACINE COUNTRY ROAD TIRES are specially designed and Extra-Tested for country road service. 5000 Mile Guarantee—and big dividends in extra mileage can be expected.

RACINE MULTI-MILE CORD TIRES are real cord tire quality—Extra-Tested. Also red and gray tubes Extra-Tested. Sold by substantial dealers. It will pay to look up the one nearest you.

For Your Own Protection Be Certain Every Racine Tire You Buy, Bears The Name

### RACINE RUBBER CO.

Racine, Wis.

5000 MILE GUARANTEE

# Farm for Profit

## and Help U. S. Win the War

Authoritative tests have proved that as high as 50 per cent increase in crop production may be expected from proper use of fertilizer. Do you realize what that increase means? Fertilizer is the basis of crop production, and compared to the prices of the crops they help to produce, fertilizers were never so cheap as they are today.

## MORE CROPS

will be raised in America this year than ever before. Make every acre you own or rent, produce to the limit. Fertilize your land—the increase in yield and price of crops will more than pay all the fertilizer expense—it will enable you to farm with profit. Don't spend your time working worn out land. Make it pay—Fertilize with Hauser's Organic Fertilizer.

#### OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscribers must have mentioned the Cultivator when writing the advertiser.

#### THIS WEEK'S COVER

The forty million dollars direct return to California from alfalfa is a most interesting item in our prosperity campaign, but the direct return is small compared to its meaning to the live stock industry and the state's greater prosperity. No one seems to have a very definite idea as to the first coming to the United States of alfalfa, other than that about the time California became one of the United States alfalfa was one of its most important crops. But long years before that the mission fathers brought in the seed of the "Chilean clover" which has since meant almost unnumbered millions of wealth to this country.

More alfalfa; more live stock; more prosperity.

#### RAISING THE WIND

The time was when windmills dotted the California landscape at frequent intervals. Later we said; "Let gas do it," and gas did it effectively and cheaply. But the price of gas is now materially higher; wind power remains at the same old quotation, and greater efficiency at lower cost is becoming essential. May we not return to more general use of the windmill without setting aside the efficient gasoline engine?

#### DAIRYING ADVANCED

In no period of California's dairy industry has advancement been so rapid as during the 16 months of the state dairy cow competition which has just ended. This may not be entirely due to the impetus given to the industry by this competition, but there can be no question that its influence has been great. The competition, which began in the fall of 1916, ended the evening of March 15 with

the awarding of prizes, a list of which was given in last week's issue. The Cultivator was represented at the dairy conference at Davis, at which time the awards were made, by Messrs. Briggs and Hughes, and the story of the conference and liberal extracts from some of the addresses made at that time will have prominent place in the next issue of this paper.

#### KEEPING BOOKS?

Whether he wishes to or not the farmer is now confronted by the fact that at least a simplified form of bookkeeping is necessary. The demands of the income tax gatherer to know as to our outgoes and incomes will come to us with considerable force at the beginning of another year. We have already stumbled through our report for the last year, or will have done so within the next seven days—or be subject to a severe fine. But now is the time to make next year's return, or, rather, to make the data available which will make an intelligent return possible.

These words are not for the farmer

naturally do not desire any immunity from rules applicable and necessary to the community as a whole. But where the enforcement of the pound-for-pound rule seems to demand an unusually heavy sacrifice, persons having farm-raised substitute cereals on hand in considerable quantity should write or consult their county or state food administrator as to proper method of procedure.

Where farmers certify in writing the exact amount of substitutes on hand or wherever substitutes cannot be obtained, the 50-50 plan may be modified, upon approval of the federal food administrator for that state.

Special rulings have also been made where farmers exchange wheat for flour. While such matters will be handled with all fairness possible, the food administration calls attention to the long list of authorized substitutes and emphasizes the paramount fact that the object of the 50-50 plan is to reduce consumption of wheat flour so that more can be shipped to the Allies.

#### W. S. S.

Boy Scouts are doing a great work: First, they are fitting them-

#### THE CHALLENGE

The most potent enemy of a country does not always come with thundering guns, poisonous gases and lines of marching men. There is a silent enemy. No gun on earth can kill it; no submarine on the sea can destroy it; no death-dealing contrivance in all the world can stop its murderous course.

This enemy is starvation.

This is the most dreaded foe our associates in this war are facing today. We in America can and must check the relentless advance of starvation in the Allied countries.

Europe's call for food is a challenge from which we cannot afford to turn away. If we value our own lives and those of other individuals we must throw all the energies of willing hearts, ingenious minds and strong bodies to the great task of saving the enormous amount of wheat, beef, pork, butter, and sugar that it will take to keep the wolf from Europe's door.

We are not asked to go hungry ourselves or even to make any large sacrifice, but merely to change our eating habits a little.

The spirits of those who have already died of starvation in France, Belgium, Poland, and Serbia call us to this small self denial. The thought of those who still struggle bravely on after nearly four years of war makes us glad to send them help.

It is only the slacker who would say "This is not my business. I will eat what I please."

who has kept books, but for the farmer who has been content with "making both ends meet" regardless of how it is done. He should appreciate the good nature of the collector this year and not presume upon it another year.

It will be a satisfaction in making out the next report not only to know but to know that we know.

#### FLOUR SALES TO FARMER

Subscribers of the Cultivator, who have their own mill and have been grinding corn, barley, feterita, or other wheat flour substitute, have requested information as to securing flour on the market without purchasing other and unneeded substitutes. We took the matter up with State Food Commissioner Merritt and, while at first it was thought no exception could be made, we have, under date of March 11 this ruling:

The food administration recognizes that the problem of saving by the farmers of the country will probably have to be handled in some cases in a somewhat different manner than in cities where ease of delivery and wide variety of food stocks make wider latitude in diet possible. The farmer frequently grows a considerable portion of his cereal grains and in using these at home he performs a patriotic service in not only effecting a substitution for wheat but also in relieving the railroads of the burden of transporting his foods. Farmers

selves to be efficient and worthy citizens and in addition they are doing some work in the present World's situation which is in addition to its good training proving most effective. One of their activities is along the line of selling of Thrift Stamps and War Savings Stamps.

There are many of us, from youngest to oldest who are entering into the "game" with the boys and thoroughly enjoying saving the dimes, nickels and pennies to go into Thrift Stamps and watching eagerly for the time to come when these may be exchanged for the War Savings Stamps.

Recently in the home of a young married couple, where the purchase of War Savings Stamps now and then would cause no great inconvenience, instead of buying in cold blood, the habit was formed of collecting every penny that appeared in the household transactions, putting into the "ginger jar," which when it became full would count out approximately \$4.13 or \$4.14, the necessary amount at this time to buy the War Saving Stamps, and the readiness with which they would pounce upon any penny which appeared in anybody's possession around that house was such that the jar was soon filled and the larger stamps were bought often-er than one would anticipate.

We Americans are being taught some lessons in thrift and incidentally some lessons in patriotism.

#### PROFITABLE PATRIOTISM

The needs of our country give opportunity for revelation of character and the patriotic spirit. Some offer their lives, give of time and effort even to impairment of health, give of money even to mortgaging the home—give, give till it Hurts. Others smugly draw down per week as much as does a Sammie for a year's service—if his life is spared that long—in the trenches.

There are Patriots—and patriots.

#### This Week's War News

The Italian front remains quiet with lines intact.

The closing of all California saloons and the securing of laborers from Mexico is being seriously urged by many Californians as an aid to the present labor situation.

The first anniversary of America's entrance into the war, April 6, will be observed by the launching of the new great liberty loan drive. The amount is not yet announced, but many anticipate it may be for \$10,000,000,000.

It is assumed that Germany will use her advantage in Russia as an opportunity to renew peace proposals, in fact, some suggestions have "leaked through" which indicate the campaign has already begun.

The campaign against German spies in the United States has been waged more fiercely during the past few days, and many have been captured. "Beware of spies" placards have been posted in many cities.

The Allies are bringing greater pressure to bear on the western front. No general advance has been made but artillery action, and especially on the American front, short drives have won small sections of the German trenches in the sector near Verdun.

Negotiations were taken up by tween the Allied powers and Holland in the endeavor to transfer Holland's merchant ships in harbors of America and its allies. All offers were refused by Holland and with little question some time today (Wednesday) the ships will be seized.

The "daylight saving" law has been enacted by congress, signed by the president, and will be in full force on and after March 31 and until October 27. All clocks are to be advanced one hour, and fuel and light saved because of more work in daylight hours will aggregate millions.

British forces announce that German prisoners of war are to be distributed over areas which the enemy's aircraft are subjecting to attack—this because it has been learned by the Allied governments that their soldiers captured by Germans have been placed in all towns which are subject to airplane attacks.

There have been no extended air raids on either Paris or London during the past week, but one large fleet of French airships bombarded Cologne, and reports by way of Berlin are in effect that many were killed. American airships are getting into action and it is now thought that these air fighters will be a greater factor.

Petrograd is now thought to be under entire control of the German army, with Germans advancing in all parts of Russia, especially along the Black Sea. Almost complete anarchy obtains in all portions of Russia, and large numbers of German troop prisoners in Siberia are revolting and capturing arms. Many of these are known to be in the section of Lake Balkal. President Wilson is still withholding approval of any advance in Siberia or Russia on the part of Japan.

# Agricultural News Notes of the Pacific Coast

## Northern California

Wild geese are creating havoc in the grainfields of Butte County.

Butte County has given \$2500 to aid the land fund of the state colony recently located near Chico.

Glenn County farm bureau meetings are scheduled for Willows, March 25, 26; Elk Creek, March 28.

Sacramento County farm center meetings: Carmichael, March 19; Del Paso, 20; Franklin, 22; Hood, 27.

March meetings of Glenn County farm centers: Orland, 18, 19; Plaza, 21, 22; Willows, 25, 26; Elk Creek, 28.

Farmers all over the Sacramento Valley are protesting at grain bag prices and endeavoring to secure relief.

The annual convention of the California Development Board is to be held in Oakland Friday and Saturday of this week.

The regular monthly meeting of the Humboldt County Dairy Association recently spent an entire session discussing labor and wages.

Oakland is planning for an exposition of resources and productions of the Pacific Coast, to be opened about August 15 and continue 30 days.

The cannery at Benicia, Contra Costa County in making a bid for try, has ornamented all its workers with blue caps and aprons trimmed in white.

California produced a half million pounds more cheese in 1917 than in 1916, but the production of condensed, evaporated and powdered milk shows an increase of over 7,000,000 pounds.

The California Peach Growers Association anticipate an average of eight cents per pound for last season's crop. Two years ago the average was three cents. Moral; organize.

R. P. Cundiff, for years county horticultural commissioner of Riverside County, but more recently connected with the state horticultural commission as field deputy, in Sacramento Valley, died of pneumonia.

Collins of Tulare County is after the "slackers," and by "slackers" he means the pesky ground squirrels or the fellow who fails or refuses to obey the statutes of the county and state regarding cleaning up this pest.

Sonoma County grape growers recently met at Cloverdale and discussed the present vineyard and wine situation. President Swett of the state viticultural commission will address the next meeting at Santa Rosa.

A five year agreement has been made by the Oakdale and South San Joaquin irrigation districts which will secure to them use of storage water from the Sierra and San Francisco Power Company at the rate of 75 cents per acre foot.

The campaign for bulk handling of grain is gathering force in practically every county north of Sacramento. At a recent meeting at Willows committeemen were appointed to work to secure the erection of elevators at every large shipping point.

Grain growers and general farmers of Yolo County are planning for a general organization which will aid the farmers in these strenuous times. The first fight is on the sack question and it is suggested that grain elevators will aid in solving this.

## Central California

Tulare is holding mass meetings to discuss castor beans.

Pacific Grove, Monterey County, is to have a shipbuilding plant.

Beekeepers of Kern County will meet at Bakersfield, Monday, April 1.

Oranges of Exeter, Tulare County, have sold in London at \$6.30 per box.

Tulare County swine men recently sold seven cars of fat stock at auction.

Kern County wants a cotton gin and will plant 1000 acres to cotton if one can be had.

Monterey County live stock men report the recent rains as worth millions to their county.

A 48 year old vineyard at Lemoore, Kings County, still produces 20 tons of fresh grapes per acre.

Kings County farm bureau has a committee appointed to investigate marketing and purchasing problems.

The board of supervisors of Monterey County have voted to supply fund for expenses of a farm adviser.

Merced County expects to plant over 1000 acres of sweet potatoes, and this by one syndicate of Fresno men.

Porterville wheat producers find that after all deductions are made that wheat nets to the producer f. o. b. \$3.45 per cental.

Tulare County farm bureau will hold its next fat hog sale at Visalia, March 23. A former sale netted to farmers over \$12,000.

No more white beans can be shipped from California until 30,000,000 pounds have been commandeered by the army and navy.

The recent rains had but little influence on the waters of Tulare Lake, and grain farmers predict that the lake will dry up during the coming summer.

The auto observation tour of farm advisers and farm bureau delegates, beginning at Berkeley and ending at Bakersfield, and occupying one entire week, was most successful.

Bids received for figs grown on Kearney Estate at Fresno have been declared too high by the state food administration, and bidders have been forced to recall the bids.

Kern County's rural auction centers were recently cited in the San Francisco meeting of the Commonwealth Club as proof of the great benefit of such sales to both producer and consumer.

Apple growers of the Pajaro Valley are planning how to meet the ever increasing demand for "the big red apple." The market will demand appearance rather than quality in the matter of apples.

Selma and Kingsburg in Fresno County claim that practically 100 per cent of the raisin acreage of those counties is signed with the Associated. Practically 90 per cent of the acreage of the state will now market through it.

The industrial welfare commission has ordered that no person, firm or corporation shall employ, or suffer or permit an experienced woman or minor to be employed in the fruit or vegetable packing industry in California at a rate of wages less than \$10 per week, nor inexperienced person, less than \$8.00 per week.

## Southern California

The Los Angeles County farm bureau now has four assistant farm advisers.

The world's greatest balloon school is to be established in Los Angeles County.

Ventura County reports the recent rains as making possible greatly increased bean acreage.

Anaheim is having trouble with its sewer farm, or rather with people who object to its location in their neighborhood.

Los Angeles County farm bureau meetings next week: Burbank, March 24; Little Rock, 26; Monrovia, 26; Lancaster, 27.

Citrus growers are somewhat concerned over prices of fertilizer and are turning every way to secure increase of humus and fertility.

San Bernardino is making an effort to secure the next state poultry show which has been held during the past few years at Coalinga.

Contract has been let for the construction of a cannery at Arlington which is to be ready for the coming season's fruit and tomato pack.

Ranchers of El Cajon Valley, San Diego County, will market their garden and farm products through their own central market on Broadway, San Diego.

The state highway commission will commence construction of an important section of the state highway in San Luis Obispo County early in April.

Owing to the greatly increased demand caused by Camp Kearney San Diego is endeavoring to arrange a large free market for fruits and vegetables.

Los Angeles City is rushing work on its big storage reservoirs and has water sufficient at present time to irrigate thousands of acres within the city limits.

Coachella Valley, Riverside County, is hoping for a new cannery and to that end a canvass is being made as to acreage which will be contracted for tomatoes.

The stock of Lima beans in California on March 1 was much larger than on March 1 of 1917. There were 250,000 sacks of Limas and 75,000 sacks of Blackeyes stored at that time.

The fight against saloons in Imperial Valley has been finally won, and the town of Imperial, the only saloon center in the county, has succeeded in abolishing its last saloon.

Owing to the present slump in cotton prices and marketing conditions, a delegation of Imperial Valley cotton growers propose to go to Washington and take it up with the national food administration.

The Los Angeles chamber of commerce has cablegram from England in effect that the embargo is lifted to the extent that currants, raisins, prunes and walnuts will be accepted by the British government to the extent of 50,000 pounds monthly.

The Laguna Water Company of the Imperial Valley, is still pushing for its rights to take water from Laguna Dam. Mark Rose has been in Washington making arrangements for opening to entry, desert claims. It is possible 250,000 acres may be irrigated under this system.

## The Coast and General

Idaho has 28 county farm agents.

A new cannery is to be opened at Blackfoot, Idaho.

The Northwest Egg Association has been organized at Walla Walla, Washington.

Seven hundred acres of farming land near Chandler, Arizona, are irrigated by pumps.

Colorado experiment station is urging treatment of celery seed to prevent blight.

A bunch of steers was recently shipped from Reardon, Washington, which netted \$120 each.

South China exports about 80,000 bales of silk worm cocoons, nearly all of which go to Europe.

The Arizona experiment station is investigating as to the value of peanut vine meal for live stock.

Payette, Idaho, has organized a wool growers' association and will pool all wool of that section.

Great Britain has requisitioned the Irish flax crop. The best grade commands 40 shillings per stone.

Forest fires burned 916,000 acres of national forest land in 1917 and caused a loss of \$1,358,600 to timber.

Measles were never so prevalent on the Pacific Coast as this year, California alone reporting nearly 265,000 cases.

Washington will produce less wheat and more barley; this largely because prices have been more favorable to barley.

Ten boxes of extra fancy Hood River apples donated to the Red Cross were recently sold in New York City for \$630.

California's surveyor general is leasing 95,000 acres of state school lands to farmers who will produce food crops.

Cottonseed oil mills of the United States received between August 1, 1917 and January 31, 1918, 3,544,509 tons of cottonseed.

Philippine Island sugar beet producers are exercised over the report that a great sugar industry is to be developed in Japan.

There are 3000 acres of sugar beet seed farms in Colorado, and the coming season's output of seed is estimated at 35,000 bags.

Facts About Sugar reports that the United States over will show 20 to 30 per cent increase in sugar beet acreage the coming season.

The department of labor hopes to have a series of at least 50,000 farm labor employment offices, or one in every large farming community.

Sugar factories will be erected on some of the reclamation lands, and it is hoped this will result in correcting the present sugar shortage.

An investigation committee has been appointed to learn as to sugar beet growing costs and costs of beet sugar manufacture in the state of Colorado.

Arizona claims the largest war garden managed by the employees of the Inspiration Consolidated Copper Company, which has over 100 acres in one large garden.

"The most important dairy meeting yet held in the West" has been said of the Western Dairy Products Show and Convention recently held at Yakima, Washington.

## Start Right to Grow More

**N**EVER before has there been so loud a call for more and still more grain, coming from all points of the compass. Never did you face so great an opportunity to help the world and yourself. Never were good tillage tools so necessary!

Good tillage implements—like **Deering, McCormick and Osborne** disk harrows, peg and spring-tooth harrows, cultivators, etc.—make mellow, uniform seed beds, free from lumps, moisture-holding, allowing crops to grow to vigorous full yield. Real cultivation means more bushels and more dollars, and the dollars will pay for your investment.

**Deering, McCormick and Osborne** disk harrows have these big, new improvements: The **Third Lever**, which controls the depth of penetration, regardless of soil condition. The **Exclusive Attachment of the Tandem**, which forces the tandem always to cut the ridges left by leading gangs, yet allows perfect flexibility at turns.

Remember the other tried and thoroughly-satisfactory features—built-in angle steel weight boxes; adjustable forecarrage; tall, hard oilers, convenient and protected; 4-wear wood bushings, improved scrapers, etc.

This year every added bushel counts doubly. Start right with right seed beds. See the local dealer and write us now about **Deering, McCormick and Osborne** tillage tools.

**International Harvester Company of America**

(Incorporated)

Billings, Mont. Crawford, Neb. Denver, Colo. Helena, Mont.  
Los Angeles, Cal. Portland, Ore. Salt Lake City, Utah  
San Francisco, Cal. Spokane, Wash.

For years the standard of farmers everywhere—Mica Axle Grease. Its high-quality petroleum grease would alone make good axle grease. But the powdered mica makes it better. It can't gum or cake and it lasts twice as long. No hot boxes.

Get a can from your dealer today.

**STANDARD OIL COMPANY**  
(California)

## Get 'em Quick!

Rid your place of squirrels, gophers, prairie dogs, etc. Do it now when the young of these crop-destroying pests are being born. It's easy and cheap—when the ground is full of moisture to

### Exterminate Squirrels and Gophers

and other rodent pests. Just gas them with Carbon Bisulphide. Used and recommended by U. S. and State officials for its efficiency and economy. Simple to handle—safe. Write today for prices and folder telling how Carbon Bisulphide works.

The California Cultivator issues from 24 to 48 pages weekly and only costs One Dollar Yearly

## Varieties of Alfalfa

At "Farmers Week" recently held by the University of Arizona, at Tucson, W. E. Bryan, assistant plant breeder of the agricultural experiment station, discussed alfalfa varieties. The following is a synopsis of his talk:

### Common Alfalfa Group

Origin of common alfalfa, probably Western Asia. Introduced into California about 1850. Common alfalfa is made up of a number of different strains. Definition of common alfalfa, "All the alfalfas that are not clearly of hybrid origin or that do not have fairly distinct and uniform varietal characteristics." Several seed generations necessary for an imported variety to become acclimated. Alfalfa seed importations still being made. Never safe for the general grower to plant large amounts of imported alfalfa seed before they are tested, either by the agricultural experiment station or by an experienced grower.

### Turkestan Group

First imported about 20 years ago. Introduced for the purpose of growing in the cold dry region of the West and Northwest. This variety is not adapted to Southwestern conditions,

yielding less than the present acclimated varieties.

### Variegated Group

Of no practical importance to the grower. Valuable only for breeding drouth-resistant varieties. Variegated varieties are distinguished by their differently colored flowers, which are purple, greenish, blackish, and yellow.

### Non-Hardy Group

Two most important varieties of this group are the Peruvian and Arabian alfalfas. The group completely lacks hardness; completely winter kills in the northern states, but during the mild winter months in the Southwest will grow at a temperature lower than the more hardy varieties. Hairy Peruvian is the most satisfactory variety of the non-hardy group. Arabian is somewhat similar to Hairy Peruvian but is shortlived. Hairy Peruvian is the best variety for the low irrigated valleys of Arizona and the Southwest in general. Hairy Peruvian is not drouth resistant, and requires as much or more water than other alfalfas. It must be sown thickly and cut early in order to get the best quality hay.

## Effective and Economical

In the good old days when California and some of the rest of us were younger, baling wire and tin cans were often effective means of accomplishing results without too great an expenditure. We recall well that in early spring when the weeds were starting by the millions and we wished to do deep and effective cultivation, and at the same time discourage the tiny weeds, we would stretch baling wire across the old-time "A" walking cultivator, thus securing an effective home made "weed cutter." Sometimes a wire would last nearly the entire day. Again, accidents would happen, and replacements were necessary, but bal-

ing wire was cheap and ever present.

Now comes a San Ysidro, San Diego County, subscriber, W. P. Wolfe, and he writes:

"An inexpensive simple weed cutter for the spike-tooth cultivator is made by tying a telephone wire one inch from the bottom end of the last colter on the side beam. Wrap once around the bottom of the last colter of the center beam, then across to the last colter of the other beam and you will be surprised at the work it will do. Where the ground is loose it leaves not a weed, where the cultivator alone goes over them leaving them in the ground."

## Questions and Answers

ANSWERS BY EDITOR AND STAFF

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

### Oil Coating for Reservoir

Have a reservoir which holds water well except for fact that when wet the banks and bottom "stir up" so easily that mud makes the water unfit for swimming and the banks break down easily. Have been advised that an application of crude oil and then layer of sand would give me a hard surface that water would not penetrate and which would not readily be broken up by persons swimming in the reservoir or walking on the bottom while wet. Can you advise me as to the truth of this statement and practicability of the idea. I have 5500 square feet of surface to cover (bottom 3500 square feet and banks, inside, 2000 square feet). How much oil and sand would I need and how much would the oil cost? Is there any other method that would give me a reasonably hard surface at a similar or less cost? The soil of the reservoir packs well and gives a good solid foundation though when wet is very soft and muddy on the surface. It is more to prevent the stirring up of mud than as a watertight contrivance that this idea was submitted to me. Any other suggestions regarding this that may occur to you would be welcome. — Subscriber.

The bottom and sides of the reservoir can be brought to the condition

desired by a coating of crude mineral oil. The method should be as follows: Draw off the water and allow the soil to become dry enough to have it to crumble nicely when stirred. Pulverize the soil to a depth of two and one-half inches and make the sides and bottom of an even grade. Take the crude oil and heat to a temperature of 180 degrees to 200 degrees, sprinkle this hot oil over sides and bottom at the rate of two and one-half to three gallons per square yard and rake in as fast as put on, getting it down to at least two inches below the surface. The oil should be heavy asphalt oil and should have at least 60 per cent of asphalt by weight. Lighter oils will partially evaporate and crumble where exposed to the air. Heavy oil can be had in the Sunset district near Bakersfield and probably in other places. The hot oil can be distributed very nicely by using a watering pot with a flat nozzle about three inches wide and one-eighth inch opening the full width instead of the usual rose sprinkler. If the work is well done there will be no free oil on the surface, but if some oil should show in places it may be covered with sand or sandy soil. This surface will be smooth and hard when settled and cold and not need any further covering. We cannot give an estimate of

cost, but as only about 600 gallons of oil will be required it should not be excessive.—J. B. N.

#### Blackeye Beans—Rabbits

A subscriber recently inquired as to immunity of Blackeye beans from depredations of rabbits. We answered in effect that presumably the rabbits' appetite was sufficient to enjoy any form of bean growth. A subscriber called our attention to the catalogue of a large seed house and to the sentence in the description of the Blackeye, "Rabbits will not eat the Blackeye." In addition we have the following from H. L. Hyland of Etiwanda who writes:

"I am a reader of your paper, and notice in your March 9th issue an inquiry in regard to rabbits eating Blackeye peas or beans. We planted some Lady Washington and Tepary beans last year, and the rabbits ate them up clean. We then planted the piece to Blackeyes and they didn't bother them at all. Several of our neighbors planted Blackeyes also without fencing and were not bothered any."

#### Raising Kids

How soon can kid be taken from mother and given other food?—Subscriber, Redlands.

If the kids are allowed to be with their dam they should be left with her until four and one-half or five months old, or until she weans them herself. At about six weeks or two months kids will begin nibbling hay or green stuff, and eating bran or rolled barley. They will chew their cuds about this age, and when this is noticed they should have access to hay or green feed together with all the milk they will take. If they are to be bottle fed, they should be removed from the dam immediately after birth, not allowing her to lick them. This is the kindest way; it is cruel to allow the mother to know her kids and become fond of them and then remove them. They should be fed five times a day at first, then gradually lessen the feeds so that at two months of age they are having their milk three times a day, morning, noon and night, with access to alfalfa hay or green feed all the time. Kids that are carefully reared on a bottle will make just as good growth as if left with their dams provided care is given to cleansing the feeding bottles, and they are given the fresh living goat's milk.—Martha W. Howland.

#### Egg Eating

I have a flock of 14 S. C. B. Leghorn pullets that eat every egg they can get at. What shall I do? Please mail me at your earliest convenience a list of the stuff recommended to put in the egg to break them of the habit.—Subscriber, Evans City, Pa.

This vice may result from faulty nest construction, such as too large a nest or open and exposed so hens may walk in it or from accidentally broken eggs which gives the first taste. Darken nest and gather eggs often. Mrs. Koethen's "Poultry for Profit" says: "When the habit is once formed it is difficult to break, and often the only cure is to eat the hen. Filling an egg shell with a mixture of cayenne pepper or other disagreeable but harmless condiments or drugs, and leaving it in the nest for the hen to taste, will sometimes effect a cure. Leaving china eggs in the nest or about the house for the hens to peck at is also discouraging. It has also been advised to trim the point of hen's beak until it bleeds."

#### Nitrate of Soda

How is nitrate of soda used as a fertilizer? How much is used to the

acre, and where and how can it be purchased?—Subscriber.

If the soda is not packed into lumps it may simply be broadcasted at the rate of 100 to 500 pounds per acre. It may be purchased from any fertilizer company advertising in this paper. It has been announced that the United States department of agriculture will sell nitrate of soda at around \$75 per ton Coast shipping points, but none has been delivered to Pacific ports. When delivery can be made then farmers can have distribution. We believe dealers are holding ordinarily now for about \$100 per ton. For applying to lawns and around flowers or in vegetable garden it is probably safer to dissolve in water. A handful to a sprinklerful of water, sprinkled over lawn, gives almost immediate results.

#### Renewing Pasture

I have foothill range in Fresno County. What seed can be sown to renew it or to increase the crop of forage pasture? — Subscriber, Tollhouse.

The inquirer does not say what the original growth was, but if a successful pasture growth was grown originally, reseeding with the same crops would doubtless prove most successful, that is, if bur clover or alfalfa were strong growers, seed of those crops is easily secured. In addition, we might refer to Many Flowering millet. In the Cultivator of November 3rd last, and again on December 29th, reference was made to Many Flowering millet, or sometimes called Indian millet, a grass which was introduced some 30 years ago by the university, and which has proven very successful. Seed for this grass is now being offered for sale. It should be worth a trial in Fresno County.

#### Peanut Shucks

I have a rich sandy loam soil. Last year I planted peanuts; the vines grew very profusely, lots of big white shells, but only about 30 per cent had kernels in. What can be done to get a better percentage of perfect nuts?—Subscriber, San Gabriel.

Presumably the cause of this trouble was lack of moisture in the ground at the time of blossoming. Successful peanut growing calls for plenty of moisture, especially at blooming time.

#### Feed Values in Maintenance Ration

Please let me know the food values of rolled barley, cottonseed meal and cottonseed cake when fed with rice straw to cattle and horses; also the amount of each for a feed. I want to find something to feed my cattle and horses that is cheap. I don't expect to keep them fat but to pull them through this dry year. How much straw (rice) will each need a day, and which of the above will be best and cheapest?—Subscriber.

It would not be advisable to feed rice straw as sole roughage to either cattle or horses, except as an emergency or in the case of idle or wintering stock that are not expected to make any growth. Rice straw has nearly the same feeding value as oat or barley straw and makes a good partial substitute for hay in feeding cattle, sheep or horses. If of good quality, one and one-half to two pounds of straw will take the place of one pound of hay. The amount of straw and of the concentrates mentioned that will be eaten depends largely on the kind of stock fed. I do not know how much rice straw either cattle or horses would eat if fed hay or other roughage in addition; somewhere between 20 and 30 pounds per head daily would perhaps be a fair estimate in either case. At present feed prices, one would not be justified in feeding as much grain as

Continued on Page 378

The strength of **SAMSON** in every part

Sub-soiling is a necessary present-day farming operation. Citrus growers of California and all modern farmers are not only *Plowing Deep* but they are getting under that hard crust with a sub-soiler.

Modern farm methods and up-to-date farm equipment are known to be most efficient and produce largest yields; yet these modern farm tools require POWER.

**SAMSON**  
**SIEVE-GRIP**  
Reg. & Pat. U. S. & Foreign Countries  
**TRACTORS**

- Supply Reliable Power for all farm work
- Are simple in construction and operation
- Give constant service at LOW COST.

Let us mail you our new folder "Modern Farming." It will interest you to know what a Sieve-Grip Tractor will do for you.

**SAMSON SIEVE-GRIP TRACTOR CO.**

(Division General Motors Corporation)

Stockton, California.

**160 ACRE FARMS IN WESTERN CANADA FREE**

## Scenes of Prosperity

are common in Western Canada. The thousands of U. S. farmers who have accepted Canada's generous offer to settle on homesteads or buy farm land in her provinces have been well repaid by bountiful crops of wheat and other grains.

Where you can buy good farm land at \$15. to \$30. per acre—get \$2. a bushel for wheat and raise 20 to 45 bushels to the acre you are bound to make money—that's what you can do in Western Canada.

In the provinces of Manitoba, Saskatchewan or Alberta you can get a

**Homestead of 160 Acres Free** and other land at very low prices.

## Those 10 Young Bulls

that we will sell in R. F. Guerin's sale of registered Holsteins on his farm near Visalia, Cal., Thursday, April 4, 1918

are nearly all sired by the 30 pound bull, Sir Veeman Korndyke Pontiac and are therefore grandsons of the great Sir Veeman Hengerveld. At least two of these young fellows are good enough to head small purebred herds, one of them being out of a 28 pound dam and the other out of a 27.42 pound four year old that milked 680.1 pounds in seven days and is in hands where her chances are exceptionally good to make a much larger record. All of these young fellows are good enough to head the best herd of grade Holsteins, and dairymen will do well to attend this sale for the purpose of buying one or more of these good youngsters.

### 69 Registered Holstein Cows and Heifers, 11 Registered Ho'sein Bulls

Comprise this sale, including high record cows and daughters of high record cows, and the great young herd sire, Sir Veeman Korndyke Pontiac. Every animal guaranteed to be a breeder, tuberculin tested and sold subject to tuberculin retest by the buyer, and pledged to absolute sale without reserve, limit, or by-bid. Catalog Free on Request

## Who's Who

With the issue of August 11 the Cultivator started its series of "Who's Who" articles to bring before its readers some of the livestock producers of California who are responsible for the large development of the industry. Where did they come from and how long have they been engaged in California development, also how do they look, so pencil and camera are to be used, and some homely, everyday photographs and notes regarding them will bring us closer together. Bear in mind we say "homely photographs" and not photographs of homely people. The idea we wish to convey is that so far as possible we will secure photographs in everyday surroundings at the homes of the livestock producers.

Written for California Cultivator By C. A. Briggs

### GION W. GIBSON

IN THE days of old, the days of gold, the days of '49" many men of vision began to see that California's real gold lay in the crops and herds of the virgin land. In the year 1850 Joseph S. Gibson began to look for a suitable location to establish a

Gion W. Gibson

farm home near what is now the town of Williams. Two years later he established himself on the farm which his son Gion W. Gibson, the subject of this sketch, now manages.

Mr. Gibson the elder before his death organized his family as a corporation, and it is this corporation, known as the J. S. Gibson Company, that "Gion W." manages. There are 1850 acres in the farm with a well equipped plant of farm buildings and machinery and a large herd of pure bred Holstein cattle. Sheep are also kept. The farm is devoted entirely to grain and stock raising. Gion W. Gibson, the manager, is known to every breeder of the Black and Whites in the state as a royal good fellow and a successful man in his chosen calling. He was a classmate of Herbert Hoover at Stanford where he specialized on engineering. His practical knowledge of farm machinery and his university training along these lines are of great value to him in his large farm operations.

### A GOOD FOUNDATION COW

The real foundation cow, the cow that will herself produce and then reproduce through her offspring in an unusual degree is much more rare in the history of registered dairy breeds than might be supposed offhand. For instance, in the present day development of registered Holsteins the cow that will produce 30 pounds of butter in seven days has become quite common, although it is still and will continue to be a standard by which values will be largely measured. With so many 30 pound records being made it would seem at first thought that many cows must have several daughters that would have 30 pound rec-

ords, but the Holstein-Friesian Blue Book tells a different story. In the whole history of Holstein breeding in the state of California there are only two cows that have each produced two daughters that have made official records of over 32 pounds butter in seven days. One of these is Winifred Hotaling, bred by Richard H. Hotaling, once owner of the famous pioneer Sleepy Hollow Herd. Winifred

## Cutter's

Germ Free

## Blackleg Filtrate

and

## Blackleg Tissue Aggressin

The New, Safe and Efficient Agents for Protecting Calves from Blackleg.

Cutter's Blackleg Filtrate positively protects against Blackleg.

Cutter's Blackleg Aggressin, made directly from animal tissues, affords even greater protection and is recommended for Pure Breds.

Neither the Filtrate nor the Aggressin can possibly produce Blackleg in even the most susceptible animals since both are germ free.

Both have given 100% protection wherever used.

Prices—  
10 dose pkge. Filtrate....\$2.00  
50 " " " .... 8.00  
100 " " " .... 15.00  
10 dose pkge. Tissue Aggressin ..... 4.00

N. B.—Cutter's Filtrate (a "cultural product" aggressin) is full 5 c.c. to the dose, as we believe that smaller doses, whether concentrated or not, afford less protection.

Write for booklet telling what germ free vaccines are and wherein "cultural product" Aggressins differ from Cutter's Aggressin made from animal tissues.

While these new "germ free vaccines" have advantages that should be known to every stockraiser, we see no reason for a quick change to them by stockraisers who have had satisfactory results from the use of

## CUTTER'S BLACKLEG PILLS

"California's Favorite" for nearly 20 years

Year in and Year Out they have given better satisfaction than any other vaccine made, and as far as price and convenience of administration are concerned, they have all the advantage.

The Cutter Laboratory, Berkeley, Calif.  
(U. S. LICENSED)

"The Laboratory That Knows How"

Hotaling lived through her prime at a time when there was little official testing done in California and died at the age of 14 years without having been given an opportunity to make official her excellent known production. She left behind her six splendid daughters, all of which are living, one of them, Winifred Hotaling 2nd, having records of 33.92 pounds butter in seven days, 19,951 pounds milk and 874.12 pounds butter in one year, and another, Winifred Hotaling 3rd, an official record of 32.19 pounds butter in seven days, made the first seven days on test, immediately after which she was shipped to the Guaranty Sale at Sacramento last December where she sold at public auction for \$1750. The other four daughters of Winifred Hotaling are all owned by R. F. Guerin, Visalia, and will be sold at public auction by California Breeders' Sales and Pedigree Company on Mr. Guerin's farm, Thursday, April 4, 1918.

A GREAT HOLSTEIN

Verona De Kol Beets is the twenty-fourth cow to obtain a place on the list of pure bred Holsteins that have produced more than 40 pounds of butter in seven days. Her figures are

Verona De Kol Beets

40.08 pounds of butter, 720.9 pounds of milk in seven consecutive days, made as a junior four year old, at the age of four years, two months. She is owned by J. T. Shanahan of New York, who thought enough of her to pay Oliver Cabana, Jr., \$10,000 for her at the famous Worcester sale last June. Last year, as a junior three year old, she produced 32.59 pounds of butter from 526 pounds of milk at just three days over three years of age. Had she freshened four days sooner she would have made a world's record as a senior two year old. Her new record places her fourth as a junior four year old.

OVERFAT HOGS AT OUR FAIRS

Written for California Cultivator  
By L. J. Belknap, of Jersey Queen Farm

In a resolution passed by the Poland-China Breeders' Association of Corvallis, Oregon, recently they cut out all hogs from our fairs over one year old. Following is their resolution: "Resolved, That to conserve nation's food supply we recommend the elimination of all breeding classes of swine over one year of age at all the international, national, state and county fairs in the United States for the period of the present war."

Possibly they may consider this a patriotic move, but I can not see it that way, but rather a very unpatriotic move. I believe that we would greatly hinder or retard hog breeding

by such a move. Did you notice, Mr. Swine Breeder, the interest which centered about the show pens at our last state fair? There was no class of exhibit at the fair which attracted more attention than did the hogs. And many sales attested to its worth.

Now, this brings us to a very important phase of the exhibiting of our breeding stock of hogs, viz, overfatting. I took it upon myself a few weeks since to correspond with our leading hog raisers including our state university farm at Davis, and received answers from all whom I addressed, and the opinion of every one was that something should be done to eliminate the overfat breeding hog from our fairs, not by keeping them at home but by showing them in common flesh. As the university professors said, "It is not only a great loss in feed but renders sterile many of our best breeding stock by overfatting." I also notice by articles in the Duroc-Jersey Bulletin and the Berkshire World that this question is receiving much attention in the East. What shall we do about it? I would suggest that a meeting of all swine breeders be called to meet at Davis, at our state farm and start things moving in the right direction. I be-

medium condition, let the barrows show what the breed will do in fat production. This would be a great saving in food and also in saving or cutting out the liability of rendering sterile our best stock. What do you say Mr. Breeder? Shall we abide the decision of the Oregon Poland-China Breeders' Association and thus work against all concerned or shall we take the matter up and fully discuss it and reach a middle ground which will be of advantage to us all and especially our government in these strenuous times.

GOATS MAKE FIRE BREAKS

A thousand head of goats have been hired by the forest service to clear the brush from the fire breaks in the Angeles national forest, according to the acting district forester. The goats were shipped to the slaughter houses in Los Angeles and were destined to be sold in the butcher shops. The butchers, however, refused to accept them, whereupon the owner rented them to the forest service for \$20 a month to keep the fire breaks clean.

The fire breaks are trails 50 feet wide and about 35 miles in length, along the ridges of the San Bernardino Mountains. They were built for the purpose of preventing the spread of forest fires, and in order to be effective they must be kept clear of all inflammable litter. To keep them clean has cost the government in labor as much as \$5000 a year. The goats will do it for \$20 a month and thrive on the feed besides.

## Northern California Live Stock Notes

Written for California Cultivator By W. S. Guilford

## HOG SHORTAGE

**T**HERE is a big shortage of hogs in California according to the reports of those who have been investigating the situation. This is sure to make breeding stock, both pure bred and grade, very much in demand when the prices of feeds again reach normal.

And it is sure to bring registered animals more in demand than ever before. Good feed is absolutely essential, but good blood is necessary for the most economical production of high class pork.

## IMPORTANT MEETING

A meeting that promises to be far reaching in its effects was held at the Palace Hotel in San Francisco, March 6, 1918. Representatives of various state swine breeders associations met with the directors of the California Swine Breeders' Association to discuss plans for better marketing of the hogs produced in the state.

It will be of interest and benefit to every one who owns a hog of any kind, or who is in position to keep a hog, to get in touch with Secretary Royce at Davis.

## PATRIOTIC SERVICE

"More pork" will be one of the big factors in the winning of the war. Of this fact there seems to be no question. Ham and bacon are two of the food products most necessary and useful to the army.

In the work of increasing pork production in California a great service is being done by President C. B. Cunningham of the California Swine Breeders' Association. He has spent his time and money freely and unselfishly in the work. He has a thorough knowledge of the hog business and his words carry conviction. Mr. Cunningham has bred and developed at Mills in Sacramento County, one of the greatest herds of Chester White hogs in America.

## CALIFORNIA ATTRACTS

In order to become the great pure bred live stock breeding center that it deserved to be California needs a great many more big constructive breeders and developers. We need a lot of the big men from the industry in the East, men who know the details of the business and who will fully realize the possibilities here.

Every year more such men are attracted to California. It is reported that A. J. Lovejoy, the great Berkshire breeder, is to bring his herd to the Natomas project at Sacramento and make his home there.

And now James E. Poole of Chicago, one of the greatest live stock writers and authorities in the world, is in California to "rest up" — and probably to locate. "Jim" Poole knows more of the ins and outs of the market end of the live stock industry than any man living. He is connected with the Breeders Gazette, Shorthorn World and is a member of other prominent agricultural publications.

There is no limit to the possibilities in the pure bred live stock industry in California, for a man of Mr. Poole's experience and ability, and the Cultivator welcomes him into the ranks.

## CULTIVATOR SERVICE

When C. A. Briggs first entered the employ of the Cultivator as general live stock field man, we had a long talk about the live stock situation and the Cultivator's relation to it.

There has never been a big live stock industry develop in any territory without the help of strong agricultural publications that keep in close harmony with the breeders. So it was agreed that the mission of the Cultivator and of Briggs and Thomas and Messenger and Hughes and all the rest of us—was to continue to do in the future what had always been the policy in the past—be of the greatest possible service to the industry in every possible way.

There is no more popular man in the business than C. A. Briggs, and his middle name is "Service."

In the broad general survey that he is constantly making of the live stock situation he has been concerned for a long time about the hog marketing

Senorita Ceres Mechthilde

A splendid registered Holstein cow closely bred in the blood of Ignaro De Kol. Her dam made 25.78 pounds butter in seven days, 707.31 pounds in one year. Owned by R. L. Holmes, Modesto.

situation. California producers, especially those who find but a few animals at a time, have not been getting as high prices as the Eastern markets seem to justify.

How can this condition be remedied? asks Briggs of himself. And "Cooperation" is the only answer. So he suggests this to the Poland-China breeders at Hanford. They are heartily in favor of a big state wide movement. Raisin growers, walnut growers, bean growers, many other producers "get together"—why not hog growers?

The Poland-China Association, a live organization composed of some of the most progressive businessmen in the state, authorizes Briggs to carry the message to the Western Berkshire Congress and to the Duroc-Jersey breeders. Committees are appointed, and the meeting with the California Swine Breeders' Association before referred to is the result.

## PORK VS. FANCY POINTS

One of the important things being discussed in connection with the shortage in pork and the relation of the registered hog to it is that pork not fancy points is the thing that counts.

The animal that makes the greatest number of pounds of good meat in the shortest time, on the least feed, that is the one that will help win the war regardless of the way the nose is turned or how the ear is kinked.

There was never a time when it was more important to make utility the first consideration than right now.

## BIG PREPARATIONS FOR RICE

The high price of rice and the wonderful returns of last season are the cause of great activity in the rice business. New projects are being

## This Concrete Feeding Floor

Prevents waste of high-priced corn—it delivers the bacon.

writing you mention the California Cultivator.

started, ditches are being dug, pumping plants installed and thousands of acres prepared for planting. And the dry winter has been very favorable for this work.

**DEMAND FOR SMALL FLOCKS  
INCREASES**

The demand for small flocks of sheep by owners of small farms in the Sacramento Valley increases steadily. Many of these are able to get a start by buying a few old ewes from some large flock owner, ewes that are too old to do well in a large flock but that are good for one or two more lambs if kept where they can get plenty of feed without too much competition. These small flocks will make a demand for a considerable number of pure bred rams in the near future.

**THE ONE FARM SOW**

I have been riding through a good section of the Sacramento Valley today, have passed possibly 75 or 100 farms. These were big grain ranches, small fruit farms, stock farms, diversified farms, and, in the edges of the towns, one, two and five acre plots.

I can think of no reason why every one of these should not keep at least one sow. Now no hogs of any kind are kept on a great many of them. Of course it would be a little bother, but quarters for a sow and litter are easily constructed, and enough feed of one kind or another goes to waste to keep a sow and litter.

There are scraps from the table, skim milk that would otherwise go to waste, waste fruit in season, vegetables from the garden at the end of the season, an armful of green weeds or grass now and then, lots of things that are relished by hogs. It will pay to supplement this with a little grain as occasion demands, but think of the results to be obtained. A 200 pound pig at 14 cents brings \$28, and the year's supply of fresh and salt pork for a family amounts to a considerable sum, more than one would think until it is figured up.

But more than all this, those in best position to know declare it a patriotic duty to do everything possible to increase the world's supply of pork. And when the "one sow" farmer starts in business it will be easy for him to secure a good pig or an older animal and have some animals in every litter to sell to his neighbors for breeding animals at better than pork prices.

It is a well known fact that one sow and litter can be made to do better than a single animal in a big herd. This is because of the individual care and attention received and the greater diversity of feed.

One of the most striking features of the 1917 California state fair hog show was the comparatively large number of prizes won by beginners in the business, men who had only one or a few sows. There is a wonderful opportunity now in the Sacramento Valley and in many other sections for a great increase in the number of successful hog raisers and in the number of hogs produced.

**GREAT BERKSHIRE**

Now Berkshire people are all talking Epochal, and Epochal stock is now given a boost by one of his offspring selling to an Illinois breeder for \$10,000. This is a new record price for the breed. Epochal was purchased some months ago by H. W. Gossard, an Indiana breeder, after looking over this country and England.

Shorthorn breeders of Canyon County, Idaho, have organized an enthusiastic Shorthorn association.

### SELF MILKER

We have a Jersey heifer that freshened January 19, giving ten quarts of milk, and since then she has become a self milker. She is a good cow and we would like to keep her. Can you suggest a cure for the trouble?—Subscriber, La Mesa.

Of course you do not need to be told that medicine will do no good in this case. Nothing rubbed on the

teats is bitter enough nor offensive enough to stop the habit. The only successful method is interference. Some are easily cured by placing a flap in the nose. A flap can be made by using a piece of wood or fibre about three-eighths of an inch thick

and about five by six or six and one-half inches. Cut a notch in the side like the accompanying diagram and slip it into the nose. A few spikes in the edge will make it more effective. Some cows are smart enough to throw this to one side and continue the habit.

Another method is by placing a halter on the head and a surcingle around the body just behind the shoulders and fastening a stick about the size of a rake handle with one end to the halter and the other end to the surcingle. The stick should be about three feet long, and a chain or strap about a foot long should connect the front end with the halter. This will give plenty of freedom to the head for all necessary movements but prevent her reaching the udder.

Still another good method is by

placing a cradle about the neck. This is done by riveting several pieces of wood about the size of a lath to two straps, one long enough to reach around the neck just back of the head and the other long enough to reach around the neck just in front of the shoulders. If the slats and straps are made the right length this will not interfere with the necessary movements but will prevent her reaching the udder.

Chose the one of these methods that suits you best and make the parts to fit your cow. No exact measurements can be given as cows are not all alike.

### Foundered Hog

We have a half grown hog that has a very peculiar ailment. He got the milk warm from the separator morning and evening then a feed of corn or squash. All at once he refused to eat and did not want to get up. He finally regained his appetite but his legs are swollen up to the knees, his ears and tail are hard and crumpled as if they might have been frozen. He is peeling all over, and the hoofs look as though they would come off. Could it be foundered? Can you help us out in this difficulty by giving the cause and the remedy?—Friend, Turlock.

Yes it is founder, and the warm separator milk is probably the whole cause of the trouble. Separator milk is full of air that has mixed with it in passing through the separator and is very hard to digest. Better let the milk sour the old fashioned way.

### Dog and Cat Ailing

My dog has been troubled with eczema and diarrhoea. His coat is dull and shedding in patches. When he runs or plays he seems to tire and sometimes seems distressed and pants hard for a long time. Feed oat meal mush and milk for breakfast, one and one-half pints milk at noon and two dog cakes in the evening. My cat, eleven and a half years old has lost weight rapidly within the last two months and is very thin with poor appetite. Takes very little milk or meat at a time and drinks a great deal of water. Its breath is very foul. Has a caught as though there was something down in the throat, but does not expel anything. The hair looks dull and he is cross at times. What shall I do for them?—Subscriber, Herald.

The dog has been overfed and probably had too little exercise. The liver and bowels are having a hard time to handle the oversupply of food. Some of the vegetable liver pills such as are made and sold for human use would do him more good than any prescription that you could get filled. One pill given twice a week for two or three weeks would be enough. Also reduce the feed. Feed very little in the morning, nothing at noon and a good square meal at night. Give him plenty of exercise. The age of the cat is enough to account for all its ailments. Decayed teeth probably cause the offensive breath. It would be a kindness to the cat to end its troubles with a dose of chloroform.

### A HIGH CLASS YOUNG SIRE

Sir Veeman Hengerveld is again tied for second place among all Holstein sires for the number of daughters that have records of 30 pounds butter or over in seven days, he now having 15 to his credit. Several of his daughters and granddaughters, including the famous Chimacum Wayne Boone, 33.69 pounds butter in seven days as a four year old, 23,576.4 pounds milk and 1067.47 pounds butter in one year, are in leading herds in the Northwest, but California has the distinction of being the home of his only son in the West. This son is Sir Veeman Korndyke Pontiac, owned by R. F. Guerin, Visalia, in whose herd this fine young sire already has

## The Localization of Truck Crops for Shipment in California

By R. G. Risser, Assistant Truck Crop Specialist, Bureau of Crop Estimates

**S**OME excellent examples of the localization of truck crop production are found in California. The large commercial shipping districts are

confined to a comparatively few sections of the state and specialization is carried to a high degree by growers.

During the season 1917-8 California grew 5482 acres of celery. Seventy per cent of this acreage was confined to the San Joaquin-Sacramento delta counties; 22 per cent to Los Angeles County; four per cent to Orange County, and four per cent to all other counties.

During the same season California grew 6775 acres of lettuce. Fifty-three per cent of this acreage was grown in Los Angeles County, 37 per cent in Imperial County, and 10 per cent in all other counties.

At the same time 7115 acres of

Probably by far the largest asparagus district in the United States is located in the San Joaquin-Sacramento delta. In 1917 there was 23,210 acres in this district alone. Aside from this delta section, the Imperial Valley, with 283 acres, is the only carlot shipper.

Brussel Sprouts are grown extensively in but one place. San Mateo County had approximately 400 acres during the winter of 1917-8.

Cassabas are grown commercially in Los Angeles, Orange, Imperial, Stanislaus, and Tulare Counties, the acreage being fairly evenly divided.

Watermelons are grown commercially in Tulare, Fresno, Merced, Imperial, Riverside, Los Angeles, and scattering counties. The acreage in 1917 was 3600.

Cabbages for commercial shipment are confined almost entirely to Los

Practical Economy and Efficiency

In the Imperial Valley the lettuce grower and truck gardener gathers the products of the field, proceeds to the railway, where, with specially constructed wheels, as shown in the engraving, his truck is driven on planking laid level with the surface of the rails, when the grooved, or car, wheel feature which has been attached to the regular motor truck, drops onto the rails, and 30 or 40 miles per hour over the railway right of way to the loading station is possible. A locking device is provided for the steering gear, so that once on the rails all the driver has to do is to step on the gas or apply brakes. On railway between El Centro and Holtville.

cauliflower and broccoli were being grown in California. Sixty-seven per cent of this acreage was grown in Los Angeles County; 26 per cent in the vicinity of San Francisco Bay, and 7 per cent in scattering counties.

In the year 1917 California grew 17,300 acres of cantaloupes. The commercial production was confined almost entirely to two counties, Imperial and Stanislaus, the former having about four times the area of the latter.

In the same year, 9000 acres of fall onions, i. e. the main crop of late onions for shipment and storage, were grown. Ninety per cent of this area was located in the San Joaquin delta.

The production of the Bermuda type of onions is even more restricted, being grown commercially in but two counties, Riverside and Imperial. These two counties have growing for April, May and June shipment this year, 892 and 520 acres respectively.

The commercial growing of rhubarb is also very limited. Aside from the districts which grow for canning and shipment in mixed cars, Alameda County, which has approximately 700 acres, is the only county which ships in carlots as a general practice.

Globe artichokes are grown in a small way in various parts of the state, but the extensive commercial production is done in San Mateo County, exclusively. About 3700 acres are under cultivation on the coast of this county.

Angeles, Orange, Imperial, San Mateo, San Diego, Ventura, Sacramento and San Joaquin Counties, the bulk of the spring shipments coming from the two counties first mentioned.

Cucumbers are grown for shipment in Los Angeles, San Diego, Yuba, and Alameda Counties. Last year 72 straight cars were shipped out, all coming from Los Angeles County.

Potatoes are more widely adapted to local conditions than some of the other crops, but the production of early potatoes on a commercial scale is restricted to districts which are relatively less frosty. The largest producing district for potatoes in the state, which is located in the San Joaquin delta, produces a small proportion of the early crop. Less than ten per cent of its plantings could be called early potatoes. The early potato districts of the state are limited to a few counties which have favored locations suited to early planting and rapid growth. Out of 58 counties in California, only ten are important as producers of early potatoes. The area of early potatoes in 1917 for the state was 19,423 acres.

Strawberries are grown for the markets of San Francisco, Oakland, and other cities in several of the central coast counties, but the principal districts for distant shipments are in Sacramento and Los Angeles Counties. Shipping districts of secondary importance are in Imperial, Placer, Fresno, and Siskiyou Counties.

### ADAMS PIPE WORKS

Bay and Mateo Sts., Los Angeles, Cal.  
Phone: FI 17; Edwy. 1264

Tomatoes are quite widely grown for canning, but the shipping districts are much more limited. While tomatoes are shipped in carlots from Merced, Sacramento, Santa Clara, Alameda, Yuba, and San Joaquin Counties, over 90 per cent of the shipments originate in Southern California, principally from Los Angeles and Orange Counties, but also from Imperial and San Diego Counties. About 1500 cars were shipped out to the markets in 1917.

From the foregoing it is evident

## Shipping Seasons of California Vegetables

By R. G. Risser, Assistant Truck Crop Specialist, Bureau of Crop Estimates

**S** HIPPING seasons for California vegetables vary considerably from year to year, depending upon temperatures, rainfall, and other factors. Abnormal conditions during the past two seasons particularly have had a striking effect upon the shipping seasons, but in a general way figures for the shipments of the calendar year 1917 will indicate the periods of heaviest shipments.

### Celery

Celery is one of the vegetables which is shipped in largest quantities from California when shipments from other districts are lightest. The months of largest movements are December for the northern or central portion of the state and January for the southern section. Midwinter shipments, under way after the New York and Michigan crops have been harvested and before Florida begins to roll her crop, are expected to command the highest prices and generally do, consequently 56 per cent of the year's shipments from Central California in 1917 and 87 per cent of the year's shipments from Southern California in 1917 went forward during the three winter months. The shipments for the season 1916-7 were cut short in January, February and March by severe freezes which delayed the maturity and movement of late plantings and resulted in ten per cent of the year's shipments in that portion of the state taking place in April. During the season 1917-18, difficulties in marketing and transportation retarded the movement of the crop in the southern portion of the state especially, while a mild winter in the central district permitted heavier shipments than usual during the latter part of the winter. These two conditions have operated to bring more of the celery into Florida's shipping season than would have been expected.

### Cauliflower

Cauliflower is another California truck crop which is harvested largely when other producing sections are less active. The months of heaviest shipments in 1917 were January for the southern district and March for the central section. Ninety per cent of the crop in the South was moved in the four months, December to March inclusive, while 78 per cent of the crop from Central California went forward in the two months, February and March. In 1916, November was a heavy shipper for the South, but the dry fall of 1917 delayed the maturity so that the big volume of shipments did not start until the latter part of December.

### Lettuce

In the movement of the lettuce crop

that the truck crop industry of California is highly localized. While records show that upwards of 30,000 cars of vegetables are shipped out of the state annually, it is also known that many of the counties only produce a small percentage of their own requirements for vegetables.

(Note: It is the intention to follow this report with one of the localization of vegetables grown for canning in California, and one on the localization of vegetables grown for seed production in California.)

there are the seasons of three different districts to consider; the long continued shipping period of Los Angeles, the short late winter period of the Imperial Valley, and the semi-annual or fall and spring periods of Sacramento. The months of heaviest shipments were May and November for the latter, and March for both Los Angeles and Imperial in 1917. In 1918 February was the month of the peak load in Imperial, and the entire season is earlier. In fact, the month which held the record for largest shipments in Imperial in 1917 is expected to be a period of light shipments from that valley in 1918. Another difference between the two years is the fact that the peak load of 1918 does not occur for these important districts coincidentally, as it appears to have done in 1917.

### Cabbage

Ninety-five per cent of the 1917 cabbage crop of Southern California was shipped in the four months, April to July inclusive, and 86 per cent of the 1917 cabbage crop of Central California was shipped in the four months, January, February, March and June. The crop which moved during the first three months of the year was produced in the region of San Francisco and the portion moved in June was produced principally around Sacramento. The peak load for Los Angeles and Orange Counties was later than usual, being in June for 1917, while the peak of the Sacramento district occurred in the same month, and the largest shipments from San Francisco took place in February.

### Asparagus

The lateness of the spring of 1917 is well illustrated by the development and movement of the asparagus crop, particularly from the extensive producing district in the delta of the Sacramento and San Joaquin rivers. In 1917 the first shipment of asparagus went East on February 22nd and in 1918 the first shipment went East on February 8th. The shipments of the early spring of 1917 continued to be short on account of the cold spring and more of the crop than usual did not come on until after the canneries started work in April. The earliest date of shipment on record for carlots is March 10. This year the carlot shipping season for the delta district in Central California and the shipping season for Imperial Valley are expected to start simultaneously.

**Cucumbers**  
The backward spring also had its effect upon the movement of the cucumber crop. In 1916 the first car rolled April 20, while in 1917 the first car did not roll until May 16th. Twenty-five per cent of the crop

The Tree Trunk

Deep Cultivation

ALL around the Tree

**Look!**

Before You Buy a Tractor

**-See what Bean TrackPULL**

## Tractor Does Down Between the Rows and Around the Trees!

Note the practical turning feature of this remarkable tractor. Watch it pull the tools around turns just as easily as on the straight-away. See it go all around a tree, with the tools sunk down deep doing valuable work, plowing or cultivating right up to the trunk. Look at the circular diagram above. Do you know another tractor that will do that? Many tractors will turn themselves around all right but the tractor you need whether in orchard, vineyard or FIELD WORK must take the tools around too and keep them at work all the way around. This requires full power on the turns. A pivot-turn with half power isn't sufficient; and a pivot-turn with one wheel or track stationary and full power thrown on one side of the tractor is a straining overload.

That's where the great PATENTED SINGLE-TRACK FRONT-DRIVE principle of the Bean TrackPULL Tractor gets its immense value. It permits full power even when turning inside a 10-foot circle (5-foot radius). No pivoting, and no overload on any part. No other tractor can be built like the Bean, because basic patents protect it from imitation.

Don't buy a tractor that doesn't turn with full power. Your work calls for many turns and a tractor that will make them right will save you time and money.

Send right now for the Bean catalog with full details, learn the price of this remarkable tractor, and the name of the nearest agent who will give you a true demonstration of the TrackPULL doing the kind of work you have waiting for it on your place. Mail us this coupon now, before you forget it.

### TREES

**A. R. Rideout**, professional avocado budder. I will bud over your worthless avocado trees to standard varieties, Lyon, Fuerte, Bartley, Sharpless, Sinaloa or any other kinds desired. I guarantee my work. Not a dollar down until the buds start to grow. A. R. Rideout, Rideout Heights, Whittier, Cal. Phone 4971.

**For Sale**—Extra fine Valencia trees, ¾ to 1½, all sour root, high buds, very thrifty, clean and straight, not fertilized, excellent soil for balling, nothing better grown. Can supply a limited acreage yet closing out entire lot of these fine trees. S. R. Coate, 564 S. Los Angeles St., Anaheim, Cal. Phone, Anaheim Pacific 403-J.

**Eureka Walnuts are the Best**—Grafted on native black roots. We also have some grafted on paradox roots, which means a hardy root system and a very prolific grower. Prices reasonable, write today, tomorrow never comes. Geyer Bros. Walnut Nurseries, 214 S. Alhambra St., Alhambra, Cal.

**Here is Your Opportunity to Secure A-1 citrus trees.** We offer several thousand 2-year-old lemons, Eureka and Villa Franca, also Washington navels; also several hundred Valencias on sweet root. We call these good trees and we know whereof we speak. **ALBERT JACKSON**, Upland, Cal.

**For Sale**—25,000 2 year old uncultured citrus trees, (Navels, Valencias, Lemons) positively of the very highest pedigreed quality, must be removed from young orchard this season. Price attractive. Write for information to John Hinkle, Lordsburg, Cal.

**Must be Sold**—3000 Valencia orange and Eureka lemons, strong healthy stock, two and three year buds, sour roots. Special prices on orders of 500 or more. Opposite grammar school, Montebello. Tel. Boyle 3311 or address L. F. Thurston, R. D. 3, Orange. Tel. 3534.

**Let Us Show You Our Ideal** twelve hundred acre orchard from which these perfect yearling citrus trees were propagated. Healthy straight stock, budded one foot high on sour root growing in our own nursery. References, R. R. Morris, West Whittier, Cal.

**For Sale**—Citrus trees all varieties. Very fancy stock, selected buds, grown at San Dimas. Splendid strong root system. Prices right. Smith Citrus Nurseries, 816 Washington Bldg.; Phone 60463, Los Angeles.

**For Sale**—Valencia Orange and Marsh grapefruit trees. Stock propagated only from Performance Record Trees of best type. Trees that will bear and insure profits. Write today. L. V. W. Brown, Riverside, Cal.

**By Far the Lowest Priced means** of reaching a buyer for what you have to sell is through classified advertisements in California Cultivator. The cost is only 3 cents per word per issue, with a minimum of 35 cents.

**Valencia, Orange and Eureka Lemon** trees one year past, ¾ to 1 inch. Pedigreed stock on sour root, high buds. We will bud 6000 choice seedlings to your order. Seed bed stock for sale. Randall Bros. Nurseries, Whittier, Cal.

**100,000 Sour Orange Seedbed Trees**—50,000 sweet; choice new stock. Trees lined out this year sure to hit high market. Better plant a few thousand next spring. Southland Nurseries; 1941 East Colorado, Pasadena.

**Trees**—Apricot, Royal, Peaches, Tuscan, Cling and Lovell. 4-6 feet, \$12.50 per 100. Olives, Manzanillo and Mission, 15.00 to \$25.00 per 100. Kavan Nursery Co., San Bernardino, Cal.

**Bartlett Pear Trees**—Three to four feet. Well rooted, Japanese and French Dormant, at a bargain. Address Robt. P. Eachus, Oak Mound Nursery, Lakeport, Cal.

**For Sale**—We still have a good selection of grafted Eureka Walnut trees for sale. Extra select lot of scions was used on northern black roots. Address C. W. Story, Rivera, Cal. Whittier Phone 4721.

**For Sale**—All Kinds Citrus Nursery stock, 1 and 2 year buds, fine roots. Y. Yamaguchi, Box 574. Phone Sunset 470R, Upland, 10th St. and Cucamonga Ave., Upland.

**Bartlett Pears**—French prunes, Standard, Apples, Cherries, Quinces, Plums, etc. No agents, save 50 per cent. Lafayette Nursery Co., Lafayette, Oregon.

**Olive Trees**—Mission, Manzanillo, Ascolano. Propagated by me from trees of known bearing qualities. Guaranteed. L. T. Schwaner, Hemet, Cal.

**For Sale**—25,000 sour and sweet seed bed stock from 8 to 20 inches. Fine clean and healthy stock. One year old. John L. Preston, Anaheim, Cal. Home 1472

**Florida Sour Orange Seedbed Stock**—Clean, straight and very vigorous. Performance Record Citrus Trees. F. H. Nushickel, Glendora, Cal. Phone 388.

**Apricots, Olives, English Morello Cherries** and Arizona Ash. First class trees. C. E. Moyer, Hemet, Cal.

**Budded Avocados**—All leading varieties. Address Mather's Avocado Nursery, 137 N. Fair Oaks Ave., Pasadena, Cal.

**Citrus Trees**—All kinds, any quantity. Butler's Morning Side Nursery, Laramanda Park, Cal.

**Florida Sour Orange seedlings**, one year old. Write for details. Katsurki, 23rd St., Upland, Cal.

**Citrus Nurseries**, Murphy Oil Company, East Whittier, California. Selected stock for sale. Inspection invited.

**For Sale**—Choice two year old Valencia trees. A. O. Hayes, San Dimas, Cal.

**For Sale**—Citrus trees and seed stock. B. C. Dodson, Glendora, Cal.

### TREES

**For Sale to Nurserymen or Large Planters**—Owner of a large block of very fine Eureka Lemon trees will sacrifice at a ridiculously low price to those who will take a large quantity. These are not old dirty culled over stock, but strictly first class trees, clean, thrifty and straight, budded high on sour stock, never have been frosted or stunted in any way. Ground has to be vacated by June 1, so this stock will actually be sold at LESS THAN SEEDLINGS CAN BE RAISED. Address X, California Cultivator.

**For Sale**—Budded avocado trees, Lyon, Fuerte, Sharpless, etc. Lyon and Sharpless budwood for sale. Buds out from bearing Lyon trees. Every tree field grown, boxed and established. At home every Saturday. Advisable to phone or write for an appointment any other day in the week as I am away budding quite a bit of the time. Do not come on Sundays. A. R. Rideout, Rideout Heights, Whittier, Cal. Phone 4971.

**For Sale**—Holt caterpillar tractor, John Deere disc plow and harrow. W. O. Tingle, 456 North Lake Ave., Col. 6177, Pasadena.

## CATTLE

**For Sale**—Imperial Sir Ormsby De Kol No. 136008. He was 2 years old January 16; is well grown and has large bones; is evenly marked and a perfect individual. His sire is McClood Prince Ormsby, half brother to Pietertje Maid Ormsby, 35.56 pounds butter in seven days (world's record 1911); half brother to the sire of Duchess Skylark Ormsby, 1507.36 pounds butter in 365 days (world's record over all ages and breeds). He is for sale only because I am retiring from business. For further particulars and price address J. W. Hastain, Brawley, Cal.

**Guernseys**—We will sell stock from our prize winning, high producing herd, at reasonable prices, valued according to individuality and breeding. Our supply is limited but if the buyer wants a number of animals and will write us we will furnish him with particulars. Revada Guernsey Farm, Yountville, Napa Co. Cal.

**SHORTHORN CATTLE, SHROP-SHIRE SHEEP,** Berkshire Hogs and Shetland Ponies. Get our prices and descriptions before buying. Butte City Ranch, Box C, Butte City, Glenn Co., Cal. W. P. Dwyer and W. S. Guilford, Owners.

**Pedigreed Bull Calves,** Registered \$50.00 unregistered \$25.00. Service bulls \$75 and up. Good individuals from producers. Cows with yearly records at a profit. Tuberculin tested. Write or come and select. Horses. N. H. Locke Co., Lockeford, Cal.

**For Sale**—Young registered Jersey cow and thorobred (solid fawn) bull calf. Also fine grade Jersey (tests high) and heifer calf. Robt. Stevenson, Box 387, Watsonville, Cal.

**Registered Holstein Bulls** from high producing dams for sale at reasonable prices. Also a few choice females. McAllister Sons, Chino, Cal.

**Venadera Jerseys,** the herd with official yearly records. Calves of both sexes for sale. Guy H. Miller, Route 1, Modesto, Cal.

**Ayrshires (registered)**—A few young bulls, heifers and cows in milk at a bargain for quick sale. A. MacMinn Phoenix, Ariz.

**Young Holstein Bulls,** bred right, grown right, priced right. Creamcup Herd M. Holdridge, Modesto, Cal.

**Sunshine Farm Jerseys**—Bulls from officially tested dams for sale. E. Greenough, Merced.

**Registered Holstein Bulls** of various ages for sale. Millbrae Dairy, Millbrae, Cal.

**Registered Jerseys**—1 yearling bull for sale. J. R. Carhart, Fullerton, Cal.

## ENGINES

**Several New and Slightly Used Engines.** ARNOTT & CO., Implements, 113 S. Los Angeles St., Los Angeles.

## FARM LANDS FOR SALE

**Buy Land Where They Raise the Prize Crops.** In Sebastopol County 49 acre farms, \$25 per acre. Ten yearly payments, 6 per cent interest. Visit our office and see the great exhibit of PRIZE WINNING Vegetables, Fruits, Grains, Alfalfa and other Grasses raised on adjoining farms. They prove our claims that this is the best land in Western Washington. Paved roads. Four passenger trains a day. Graded School, Cannery, Creamery, Cheese Factory. Plenty of work for the laboring man in the mills and camps, where 75 settlers are all boosters. DON'T LOSE A DAY in asking for our illustrated literature.

**BROWNELL LAND CO.,** 904 Third Ave., Seattle, Washington.

**For Sale**—169 acre improved ranch, 11 miles from Los Angeles, 1 mile from Westminister. Good alfalfa, beet and bean land. Plenty water and good buildings, \$225 per acre. Potted on Oct. 1 September. W. F. Marks, 226 S. Main St., Los Angeles.

**Information Free** about state and government land bargains especially stockraising, homesteads. Joseph Clark, Sacramento.

**For Sale or Exchange**—4 acres in city of Santa Cruz, for Los Angeles or Orange County acreage. William Richard, Santa Cruz, Cal.

## A HIGH CLASS YOUNG SIRE

Continued from Page 370

around 30 choice young daughters, and 65 of the cows and heifers in the herd are now bred to him. Mr. Guerin is going to keep all of the daughters of Sir Veeman Korndyke Pontiac as the breeding females for his future herd, but everything else in the herd, including Sir Veeman Korndyke Pontiac himself, will be sold at public auction on Mr. Guerin's farm, Thursday, April 4, 1918, by California Breeders' Sales and Pedigree Company. Mr. Guerin has always been a great admirer of the wonderful old sire, Hengerveld De Kol, and has used two grandsons of the great century sire in his herd, bringing them from the East at long prices. As a result the herd now contains no less than 42 great granddaughters of Hengerveld De Kol. These are practically all bred to Sir Veeman Korndyke Pontiac, who is out of a 30.13 pound daughter of Sir Korndyke Pontiac Artis whose dam is Pontiac Atis, 31.71 pounds butter in seven days, 1076.91 pounds butter in one year, and she is a daughter of Hengerveld De Kol. Thus will the calves these cows drop carry still more the blood of one of the very greatest past sires, and they will also have a wonderfully strong infusion of the blood of one of the greatest of the present sires, Sir Veeman Hengerveld, for not only is he the sire of Sir Veeman Korndyke Pontiac, but he is also represented on the dam's side, the 30.13 pound dam of Sir Veeman Korndyke Pontiac being out of a 29.88 pound four year old daughter of Sir Veeman Hengerveld.

At the live stock show held in connection with the Southern Cattleman's Convention at Little Rock, Arkansas, recently, a 15-year-old boy, exhibited a roan grade Shorthorn steer calf weighing 950 pounds at 11 months of age. This calf was the production of the first cross of a registered Shorthorn bull on an Arkansas scrub cow. The weight of the calf at 11 months was nearly 150 pounds more than the weight of the dam. It sold for \$200.

At a meeting of the board of directors of the Lindsay-Strathmore irrigation district attorneys were instructed to make application to the state water commission for the right to divert waters of the Kaweah and St. Johns Rivers.

## SURELAY CALENDAR

The Surelay folks, in other words, the Sperry people, have put out the finest wall calendar for poultry people we ever saw. It is a wall hanger about 11 inches wide with a vertical measurement of 12 or 14 inches. The lower half gives the regular monthly calendar leaf with perforations, leaving the large half of the leaf containing an egg and poultry record which makes a whole poultry yard bookkeeping system. There is a blank for each day in the month, permitting account of Eggs Gathered, Market Price, Value Eggs Sold, Value Poultry Sold, Value Eggs and Poultry Used by Family, Pay for Feed and Supplies. Then below this daily account is place for Monthly Summary, Total Received for Eggs Sold, Total for Poultry Sold, Value of Poultry and Eggs Used by Family, with of course place for totaling. Then there is blank for Cost of Feed and Supplies, Profit for the Month, Profit from Previous Months and Total Profit. Then there is a place for monthly invoice where Laying Hens, Pullets Not Laying, Cocks, Cockerels, and Baby Chicks make their showing of On Hand, Purchased or Hatched, Sold or Used and Balanced.

We doubt not if request is made of the Sperry Flour Company, Stockton, this calendar will be mailed.

## A Cheap and Practical Brooder

Written for California Cultivator By C. A. Nidever

THE following is the plan of a thoroughly successful and practical brooder house.

It is built with the idea of low cost, successful brooding and serviceability for other uses while not used as a brooder, such as store house, granary, etc. When a farmer raises a flock but once every two years it is wise to have a brooder

house that can be used for other purposes while not brooding the chickens. Even if a flock is raised every year the brooder is in actual use only about three months of that year.

The plan given here is for a straight up and down board house 22x18 feet which will take care of 1000 chicks. However, by remodeling, the brooding system proper can be fitted to any old outbuilding that may be on the place. It can be used to brood any number of chicks desired. All that is needed to carry the heat is any kind

pit forms one side of the sand box, or brooder.

Build the sand box four feet wide and deep enough to have six inches of sand over the top of the stove pipe. Dirt can be used up to within six inches of the top, but sand should be used on top as it is cleaner.

As the stove must set down to connect with the pipe running through the sand, the end of the pit will have to be enlarged to allow plenty of space, say five feet by six feet. Be careful to line the wood with tin wherever the pipe goes through.

Hoovers are built on top of the sand box. On the pit side set up a 1x8 board on the floor. On the opposite side set a 2x4 on 4 inch blocks. Cut 1x8 boards for partitions. Place the blocks to fit the partitions. Dividing the brooder in compartments prevents crowding. Swing four inch doors from the 2x4 to the floor. Make these to swing up and catch with a hook.

Set up studding to the ceiling joists from the 2x4 that forms the floor side of the hoover. Patch a small mesh wire netting from the hoover doors to the ceiling the full width of the house. This is to keep the chicks on the floor space.

Make cloth hovers to fit the partitions in the brooder. These should swing by hinges from the side away from the pit. These hovers can be raised or lowered from the pit to regulate the heat in the brooder.

When the chicks go into the brooder at night, lift the hovers and distribute the chicks equally among the compartments. This can all be done from the pit which makes the work very easy.

It would be best to have the chick floor made of tongue and groove lumber but plain boards will do if made tight. Put plenty of sand on the floor and the cracks will soon fill.

The floor lumber should be cut to run to the brooder or sand box. Cut the lumber to cover only half of the floor joist next to the sand box.

After the brooding is over, clear out all of the hovers and wire netting, nail a 2x4 on the wall in the pit on a level with the floor and cut boards to lay across the pit and sand box. This

gives you floor space over the whole house to be used for storage purposes until next brooding season.

In putting in the top brooding fixtures nail lightly so that they will come out easily to be laid away until wanted again. Nail a slanting board to fit the corners of the chick floor to prevent crowding.

Hang a thermometer in the house and keep the temperature warm at all times.

Put a damper in the stove pipe where it enters the sand and one also at about six feet from the floor after the pipe leaves the sand. These help regulate the heat.

Set in four windows on the south side of the house 12 inches from the floor.

There should be a door from the chick floor to the yard, a door and steps into the pit from the outside and a door and steps out of the pit into the chick floor. This last door can be made of wire netting.

The house should be lined with tar roofing paper and cracks covered with batting on the outside.

For the first three or four days the brooder doors should be closed at night. After the chicks learn where to keep warm leave the doors open all the time. This will allow them to move outside if too warm and back in when cold.

For the door leading from chick floor to yard I have used common boards and set a window in. This also serves for the exit for the chicks to the yard.

A man with a working knowledge of a saw and hammer and a little ingenuity can build a first class brooder, either by remodeling an old building or using new lumber, if he will study these instructions. If built properly it is about as successful a method of brooding as can be found.

### STORRS EGG LAYING CONTEST

Storrs, Connecticut, March 8, 1918, report for the eighteenth week ending March 6, 1918.

The hens in the laying contest at Storrs shelled out 3660 eggs in the eighteenth week. This is a yield of a little over 52 per cent, is nearly 400 eggs better than for last week, and is by far the biggest yield in any one week since the contest opened last November. Barred Rocks and Rhode Island Reds were the only two breeds to make the honor roll in the eighteenth week.

As the output of newly laid eggs increases as it is obliged to do for the next few weeks, the price naturally eases off a little. The season for preserving eggs for home use will soon be at hand. If one waits until too late in the summer, say June or July, the eggs do not keep so well, and another thing, a rise in price is likely to set in about that time.

The three best pens in each of the principal varieties are as follows:

#### Barred Plymouth Rocks

Jules F. Francois, 567; Rock Rose Farm, 515; Tom J. Adamson, 515.

#### White Wyandottes

Obed G. Knight, 646; Brayman Farm, 531; J. Frank Dubois, 527.

#### Rhode Island Reds

Richard Allen, 577; Pinecrest Orchards, 520; Chas. H. Lane, 457.

#### White Leghorns

J. O. LeFevre, 555; Braeside Poultry Farm, 528; A. P. Robinson, 504.

#### Miscellaneous

Oregon Agricultural College (Oregon), 579; Cook & Porter, (Buff Wyandottes), 564; H. P. Cloyes, (Buff Wyandottes), 489.

**BUTTERMILK ADDED**

THE U. S. GOVERNMENT AGRICULTURAL EXPERTS have proven that buttermilk prevents and cures White Diarrhoea and is of great importance in poultry feeding.

Send to U. S. Agricultural Dept. Station, Berkeley, Cal., for Bulletin 162 (free) explaining the value of buttermilk to poultry.

Globe A-1 Buttermilk Mash is a food poultry like and eat in preference to grain.

Costs no more than ordinary mash, but it's worth more because of the DRY BUTTERMILK added.

Sample and valuable feeding information free.

of a stove, a heater stove preferred, with six inch stove pipe running through the dirt or sand and then out the roof.

Lay off the ground for size of building wanted and dig a pit three feet deep and three feet wide the length of the building. Lay the sills so as to floor the pit also. The outside of the house will wall one side of the pit. The other side of the

## The "California Special" Plants Every Variety of Beans Including Horse Beans

Make sure of a good stand of beans on your valuable bean land, by using the thoroughly dependable "California Special" Bean Planter.

Each planter is equipped with a set of rotary droppers adjustable to plant any variety of beans from small white to large limas. This is the best and most dependable dropping device known for planting beans. The dropper rotates without friction through the hopper cupping the seed as delicately as though each were selected by hand. The seed passes from dropper to boot which runs at any depth set. Shoe runners will be

furnished where desired. Each boot is hinged with wooden peg. Open wheels run back of boot. These press inward and downward around the seed but do not pack the ground directly on top. The California Special is the last word in bean planting machinery. The frame is especially strong—is made low for orchard work if desired and is so evenly balanced and adjusted as to make it easy to handle. Made in 2, 4, 6 and 8 row sizes.

Rotary dropping device insures uniform planting. It cannot injure any of the seed.

Catalogue and circulars sent on request. We make a complete line of bean and beet tools.

This planter will save the price of itself in not injuring the seed bean during the process of planting.

**Ventura Manufacturing & Implement Co.**  
Ventura, Cal.

VEGETABLE SHIPPING

Continued from Page 373

moved in May, 65 per cent went forward in June, and nine per cent was shipped in July.

Cantaloupes

The cantaloupe crop was also late. Not since 1913 has there been such a late start as there was in 1917. The following table indicates the important facts shown in the records for Imperial Valley.

Season	1st Car	Peak Load	First Car	Peak Load	Last Car	Days
1913	June 4	June 24	July 30	57		
1914	May 16	June 15	July 16	61		
1915	May 25	June 23	July 21	67		
1916	May 16	June 12	July 19	65		
1917	June 4	June 26	Aug. 1	55		

This table shows a relationship between the lateness of the peak load and the shortness of the season. The late seasons are the short ones. The table also shows that there has been more variation in the dates of shipment of the first cars than on the dates of shipment of the last cars, and that there is least variation in the peak load.

HOLD YOUR LIBERTY BONDS

One who subscribes for a Liberty Bond and gets credit as a patriot for doing so is not acting patriotically if he immediately sells that bond, that is, unless he imperatively needs the money, says Secretary McAdoo. It is not the mere subscription that helps the government, it is the actual loan; shifting the bond to some one else does not help.

The same objection lies to exchanging Liberty Loan Bonds in trade. Merchants offering to take Liberty Loan Bonds in exchange for merchandise are doubtless actuated by patriotic motives, but such transactions tend to defeat a primary object of the bond sale, the encouraging of thrift and the discouraging of expenditures. Bonds so exchanged are in most cases immediately sold on the open market which tends to depress the market price and affects adversely the sales of future issues.

Secretary McAdoo expressly states that there is no desire on the part of the government to prevent or interfere with legitimate trading, in good faith, in Liberty Bonds.

It is one of the great objects of the treasury department to have these bonds held as permanent investments by the people and paid for out of savings, thus at once providing funds for the government and conserving labor and material.

There are the soundest reasons for holding Liberty Bonds. Their quotations under par on the stock exchange means a loss only to those who sell. The financial history of the United States shows that in times of peace all of its bonds have gone above par, some as high as 139. The tremendous growth of our resources and of our trade, our domestic trade alone having increased from \$30,000,000,000 to \$64,000,000,000 in the last four years, warrants the belief that our government bonds are the soundest investments in the world and with the restoration of peace conditions will command a handsome premium in the market.

BEEKEEPERS ORGANIZE

At the recent meeting of beekeepers at Lompoc, Ventura County, there was organized the Honey Producers' Exchange, with the following charter members: Robert M. McCain, inspector of apiaries; Fred A. Parker, W. J. Oats and A. L. Jacobs. These men are the first in the state to enroll in the cooperative exchange, and represent an ownership of over 2000 colonies of bees.

FARM LABOR IN CALIFORNIA

Professors R. L. Adams and T. R. Kelly are authors of "A Study of Farm Labor in California," issued by the state college of agriculture as Circular 193. It is a 76 page circular and takes up California's labor problems from almost every standpoint. In this report a "farm labor shortage" is considered to be present whenever one or more of the following factors are being generally experienced by farmers throughout the state.

- (a) Losses in acreage, quantity, or quality of normal production.
- (b) Inability to expand sufficiently to meet war demands for products, especially those specifically requested by the federal government.
- (c) Payment of higher than normal wages, either as cash or as perquisites.
- (d) Importation of labor from outside sources.
- (e) Difficulty in obtaining and holding men.

Discussion follows as to transient labor needed, farmers' responsibility, with reference especially to wages, houses, hours, etc. The liquor question is also given full attention. Another point touched upon is anti-loading or vagrancy laws, importation of Oriental and Mexican labor, losses due to shortage of labor, and in fact, every phase of the labor situation is very fully discussed.

SAVE FARM MACHINERY AND IMPLEMENTS

On many farms there are implements such as grain drills, planters, harrows, binders, etc., which are not at all protected from the weather, but are rusting away, with the wood parts cracking and going to ruin. This is particularly undesirable at the present time when all implements, tools and machinery are scarce and selling at a high price, and are badly needed to offset the scarcity of labor. If it is not possible to provide sheds in which to store the implements they can be easily and cheaply protected and preserved by applying oil to all parts. Any oil will be suitable for this purpose — crude oil, or oil which has been drained from automobiles will be excellent. A few minutes' time and a few cents' worth of oil will save many dollars' worth of implements.—Agricultural Agent Cochise County, Arizona.

TRY RAISING CANE

Many a farmer supplemented his supply of sweets last season by growing some sugar cane. How about growing a patch this year?

The Poultry Breeders' Association of Southern California recently met in Los Angeles and discussed the matter of hatching more chicks. Speakers scheduled were B. R. Holloway, and A. A. Peters, vice president of the American Poultry Association and now representative of the United States department of agriculture. The board of directors recently elected as officers for the ensuing year the following: President, W. J. Stewart; first vice president, Harold Waltham; second vice president, H. L. Gill; secretary-Treasurer, Walter M. Ross; auditor, H. D. Armstrong.

Manchuria is now a great factor in the world's supply of beans. Efforts are being encouraged by the government to improve the quality and especially the yield of varieties now grown. The result in 1917 was that an increase of 20 per cent in yield over the preceding year was secured, principally due to improved seed planted.

### The Evolution of Irrigation

Just as the Open Irrigation Ditch was superseded first by wooden flumes, and then by concrete flumes, so were the latter in turn forced to give way to the "K-T SYSTEM" of underground conduits, equipped with gates and valves. This provides for a perfect distribution of the water at the exact spot required, and at just the time it is needed. It also eliminates the constant losses resulting from evaporation, seepage, and ditch choked with weeds—wasting land, water, time and money.

Write today for our Special Booklet, which gives complete detailed information.

## Food will Win the War

**T**HE government says so. It is deeply in earnest. It asks you to supply the food—more food and more food—for ourselves and our allies. Your patriotic duty to your country now is to produce food.

Modern methods include power farming, deeper plowing, better cultivation, greater economy. The farm tractor offers the way.

On the University Farm at Davis, California, April 17th, 18th and 19th, there will be a tractor demonstration. On April 20th there will be the annual farm picnic, but no demonstration.

There will be tractors, plows and other modern and improved farm implements in actual operation. Big exhibit tents will be filled with power-operated machinery. The University will conduct scientific tests to show tractor efficiency.

Make reservations with the Chamber of Commerce of Sacramento or Davis, or write for information to Room 1015 Monadnock Building, San Francisco. Special railroad rates are offered. Ask your station agent.

### QUESTIONS AND ANSWERS

Continued from Page 365

In the past, but on the other hand, if no other roughage but rice straw is available, it is necessary to supplement it with more grain than if hay is fed with the straw. It is doubtful, however, whether it will pay to feed more than a couple of pounds, or at the outside four pounds per head daily under present conditions. Since there is but little difference in the market price of rolled barley and cottonseed meal at this time, a mixture of two parts of the former to one of the latter, by weight, will be as cheap as any and will prove a better feed, for cattle at least, than barley only when fed with rice straw. A feed of one pound of barley and one-half pound of cottonseed meal twice daily, with as much rice straw as they will eat, will make a fair maintenance ration for both cattle and horses and may enable the former to make slight gain in body weight. The following statement shows the nutrients furnished in a pound of the feeds given, but it should be remembered in this connection that digestible components of rough feeds furnish less net nutrients than similar amounts in concentrated feeds, on account of the greater loss of nutrients in the digestion of the former feeds.

	Per Cent Moisture...	Per Cent Protein...	Per Cent Digestible Carbohydrates and Fat...
Rice straw .....	7.5	.9	38.5
Barley .....	10.8	9.4	75.9
Cottonseed meal .....	7.8	37.6	43.0

#### Lime on Cut Potatoes

Is it best to scatter air slacked lime over potatoes after they are cut or will it injure them? — Subscriber, Whittier.

In order to prevent fungous diseases many planters believe in dusting the cut surfaces with gypsum, air slacked lime, or sulphur. Gypsum is generally preferred. Regarding cutting we know of planters who stick literally to cutting either one or two eyes in each piece, and cut the potato in such extremely small pieces that there is not sufficient starch or nourishment for the young sprout to get the right start. This is one of the reasons why some planters advise planting entire potato rather than cutting. We believe best returns may be had by cutting potato seed, but do not cut too small.

#### Morning Glory

What is the best way of exterminating Russian morning glory? — Subscriber, Whittier.

The best discourager yet devised for morning glory is almost continuous cultivation. No plant can resist the removal of all its leaves or breathing surfaces. There are chemical remedies but they are usually so expensive and destroy the ground for all other crops for so long a time that they are hardly profitable. Amongst these are arsenic, common salt, distillate, and several proprietary products.

#### Blackeye Beans

Does light frost injure Blackeye beans; and how early should they be planted? Will they mature in 30 days? — Subscriber, Fresno.

Blackeyes will stand but little frost in common with other members of the bean family, although they are rather hardy. The planting of beans before the soil is warmed up is liable to result in seed decay. There is little ad-

vantage in planting prior to the first of May, although home garden beans may be planted at any time, for there is no great loss if crop does not come.

#### Corn for Ensilage

What is best kind of corn to plant for ensilage?—Subscriber, Gardena.

Any good, large dent corn. Golden Beauty is a very heavy grower. The Eureka Ensilage and the Orange County Prolific are also good varieties.

#### Applying Manure

Will manure applied now influence this year's crop? — Subscriber, Gardena.

Yes, but this question might call for an answer much longer, for a book might be written on the one question. There are soil conditions for certain crops which might make heavy application of stable manure injurious to the crop, even to the extent of complete destruction of the crop. For instance, grain crop on light sandy soil, into which coarse strawy manure has been plowed, would probably prove a complete failure. On the other hand, well rotted manure applied to any orchard or garden crop where irrigation is to follow might give large return on the investment. Stable manure has advantage as a mulch and benefits the soil physically, and it also carries elements of fertility in a most satisfactory form.

#### Leaky Silo

Have a re-saw silo that leaks in one or two spots and spoils surrounding silage. It is constructed of one-half by 12 inch redwood in two layers with all joints broken, and in addition it is lined with tongue and groove flooring. The leaky spots are about two feet square. Can they be painted with some leak-proof preparation? — Subscriber, Gardena.

A leaky roof is an exasperating proposition, and it is hard to locate the exact point of the leak. With the silo described, only a suggestion can be offered, and that is to make thorough application of melted asphaltum in effort to seal every possible crack or crevice.

#### Laying Out Alfalfa Field

Am preparing to plant 160 acres to alfalfa. There is a fall of one foot across the 160 acres to the west and slightly greater to the south. The soil is silty and the highest corner is the northeast. How best may I lay this out for irrigation and more economical planting?—Subscriber.

Water for irrigation should always be delivered on the highest corner of the land to be irrigated. If for some reason, such as poor water bearing strata under the high corner, it is not practical to place the pump at the high corner, there should be a pipe to carry the water to that place. The land in question is so nearly level that care must be taken to prevent drowning out the alfalfa by standing water, and the proposed stream of 75 miners inches is too small to be used economically. A reservoir 200 feet square and capable of carrying water to a depth of four feet will assist greatly since the stream from the pump can be combined with a stream of 125 inches from the reservoir, thereby getting water enough to cover an acre of land four inches deep in an hour. We would advise laying off the land with the borders running in the direction of the greatest slope, making the borders 66 feet apart and the head ditches 660 feet apart, having an acre to each panel. In this way an acre an hour can be irrigated and the reservoir will contain water for a day's work at a time, provided the land is fairly heavy and an even sur-

face is secured before sowing the seed.—J. B. N.

#### Rough Skinned Fruit

I have quite a number of Navel orange trees, the fruit of which is becoming woody and thick, rough skinned. I have talked to several horticulturists about this condition and

they all seem to give me a different line of treatment. Will you kindly advise me, if it is within your power, what is the proper method to pursue to eliminate this condition? — Subscriber, Sacramento.

This is more of an indication of undesirable type than of soil or physical conditions. Of course it may be

that in severe climatic conditions it would be impossible to produce a fine, thin skinned orange, that is, continued cold weather or other conditions which were not suitable to the orange would prevent high quality, but in the study of sport fruits and undesirable types, taken up by the department of

agriculture through A. D. Shamel, it has been found that fertilizing or giving best of soil tilth is unavailing in correcting this unsatisfactory condition. If climatic conditions are such that these trees should give a thinner skinned, smoother fruit, then rebudding to the smooth, thinner skinned type of fruit is the only procedure.

## IMMEDIATE DELIVERY

**YUBA** Ball Tread Tractors, Model 12-20, are now being delivered.

To relieve the shortage of labor—to hasten the planting—to insure the work done now, order a Yuba 12-20 for immediate delivery.

The price is \$2750.00 cash (f. o. b. Benicia, California)—the number ready for shipment is limited—wire your order and put one to work.

**PEACE**—the only way to get it is to fight for it. We're doing our all—three shifts—every hour of the 24—turning out tractors for you.

Get one, put it to work—it will keep going day and night and rarely need repair.

Quick action in securing one of the Yuba Tractors means sure crops for you—and food for our soldiers.

### HER "BIT"

Written for California Cultivator  
By Ida M. Blake

Yes, she has a knitting bag.  
She takes it everywhere.  
She never lets a minute drag,  
But starts to knit right there.

It makes no difference where or when,  
In workshop, town or show,  
Out will come the knitting, then  
Away the needles go.

She's knitting socks and sweaters too  
And helmets by the score.  
She's knitted wristlets not a few;  
She'll keep on knitting more.

She's knitting for her soldier boy.  
He's gone to France. Maybe  
She'll help that wicked "Hun" destroy,  
For that's her "bit" you see.

### THE RUSSIAN

By Mary Raymond Shipman Andrews  
in Milestones

**T**HE little dinner party of grizzled men strayed from the dining room and across the hall into the vast library, arguing mightily.

"The great war didn't do it. World democracy was on the way. The war held it back."

It was the United States Senator, garrulous and incisive, who issued that statement. The Judge, the host, wasted not a moment in contradicting. "You're mad, Joe," he threw at him with a hand on the shoulder of the man who was still to him that promising youngster, little Joe Burden of The School. "Held back democracy! The war! Quite mad, my son."

The guest of the evening, a Russian General who had just finished five strenuous years in the cabinet of the Slav Republic, dropped back a step to watch, with amused eyes, strolling through the doorway, the two splendid old boys, the Judge's arm around the Senator's shoulders, fighting, sputtering, arguing with each other as

they had fought and argued forty odd years up to date.

Two minutes more and the party of six had settled into deep chairs, into a mammoth davenport, before a blazing fire of spruce and birch. Cigars, liquors, coffee, the things men love after dinner were there; one had the vaguest impression of two vanishing Japanese persons who might or might not have brought trays and touched the fire and placed tiny tables at each right hand; an atmosphere of completeness was present, one did not notice how. One settled with a sigh of satisfaction into comfort, and chose a cigar. One laughed to hear the Judge pound away at the Senator.

"It's all a game." Dr. Rutherford turned to the Russian. "They're devoted old friends, not violent enemies, General. The Senator stirs up the Judge by taking impossible positions and defending them savagely. The Judge invariably falls into the trap. Then a battle. Their battles are the joy of the Century Club. The Senator doesn't believe for an instant that the war held back democracy."

At that the Senator whirled. "I don't? But I do.—Don't smoke that cigar, Rutherford, on your life. Peter will have these atrocities. Here—Kaki, bring the doctor the other box. That's better. I don't believe what I said? Now listen. How could the fact that the world was turned into a military camp, officers commanding, privates obeying, rank, rank, rank everywhere through mankind, how could that fail to hinder democracy, which is in its essence the leveling of ranks? Tell me that!"

The doctor grinned at the Russian. "What about it, General? What do you think?"

The General answered slowly, with a small accent but in the wonderfully good English of an educated Russian. "I do not agree with the Senator," he stated, and five heads turned to

listen. There was a quality of large personality in the burr of the voice, in the poise and soldierly bearing, in the very silence of the man, which made his slow words of importance. "I believe indeed that the Senator is partly—shall I say speaking for argument?" The Senator laughed. "The great war, in which all of us here had the immortal honor to bear arms—that death grapple of tyranny against freedom—it did not hold back the cause of humanity, of democracy, that war. Else thousands upon thousands of good lives were given in vain."

There was a hushed moment. Each of the men, men now from 50 to 60 years old, had been a young soldier in that Homeric struggle. Each was caught back at the words of the Russian to a vision of terrible places, of thundering guns, of young, generous blood flowing like water. The deep, assured tones of the Russian spoke into the solemn pause.

"There is an episode of the war which I remember. It goes to show, so far as one incident may where every hour was crowded with drama, how forces worked together for democracy. It is the story of a common man of my country who was a private in the army of your country, and who was lifted by an American gentleman to hope and opportunity and, as God willed it, to honor. My old friend—the Judge can tell that episode better than I. My active part in it was small. If you like"—the dark foreign eyes flashed about the group—"if you like I should much enjoy hearing my old friend review that little story of democracy."

There was a murmur of approval. One man spoke, a fighting parson he had been. "It argues democracy in itself, General, that a Russian aristocrat, the brother of a duke, should remember so well the adventures of a common soldier."

The smouldering eyes of the Slav turned to the speaker and regarded him gravely. "I remember those adventures well," he answered.

The Judge, flung back in a corner of the davenport, his knees crossed and rings from his cigar ascending, stared at the ceiling. "Come along, Peter. You're due to entertain us," the Senator adjured him, and the Judge, staring upwards, began.

"This is the year 1947. It was in 1917 that the United States went into war, 30 years ago. The fifth of June, 1917, was set, as you remember, for the registration of all men in the country over 21 and under 31, for the draft. I was 23, living in this house with my father and mother, both dead before the war ended. Being outside of the city the polling place where I was due to register was three miles off, at Hiawatha. I registered in the morning; the polls were open from 7 a. m. to 9 p. m. My mother drove me over and the road was being mended, and, as happened in those days in the country, half a mile of it was almost impassable. There were no adjustable lift-roads invented then. We got through the ruts and stonework but it was hard going, and we came home by a detour through the city rather than pass again that beastly half mile. That night was dark and stormy, with rain at intervals, and as we sat in this room reading, the three of us—" the Judge paused and gazed a moment at the faces in the lamplight, at the chairs where his guests sat. It was as if he called back to their old environment for a moment the two familiar figures which had belonged here, which had gone out of his life. "We sat in this room, the three of us," he repeated, "and the butler came in."

"If you please, sir, there's a young man here who wants to register," he said.

"Wants to register!" my father threw at him. "What do you mean?" "We all went outside and there we found not one but five boys, Russians. There was a munitions plant a mile back of us and the lads worked there and had wakened to the necessity of registering at the last moment, being new in the country and with little English. They had directions to go to the same polling place as mine, Hiawatha, but had gotten lost and, seeing our lights, brought up here. Hiawatha, as I said, is three miles away. It was 8:30 and the polls closed at nine. We brought the youngsters inside, and I dashed to the garage for the car and piled the de-

lighted lads into it and drove them across.

"At least I tried to. But when we came to the bad half mile, the car rebelled at going the bit twice in a day and the motor quit. There we were—8:45 p. m.—polls due to close at nine—a year's imprisonment for five well-meaning boys for neglecting to register. I was in despair. Then suddenly one of the boys saw a small red light ahead, the tail light of an automobile. We ran along and found a big car standing in front of a house. As we got there, out from the car stepped a woman with a lantern, and as the light swung upward I saw that she was tall and fair and young and very lovely. She stopped, as the six of us loomed out of darkness. I knew that a professor from the university in town had taken this home for the summer, but I didn't know the people or their name. It was no time to be shy. I gave my name and stated the case.

"The girl looked at me. 'I've seen you,' she said. 'I know you are Mr. McLane. I'll drive you across. One moment, till I tell my mother.'"

"She was in the house and out again without wasting a second and as she flashed into the car I heard a gasp, and I turned and saw the glare of the headlights as they sprang on one of my Russians, a gigantic youngster of six feet four or so standing with his cap off and his head bent, as he might have stood before a shrine, staring at the spot where the girl had disappeared into the car. Then the engine purred and my squad tumbled in.

(To be continued next week.)

### GOOD THINGS MADE WITH RICE FLOUR

Written for California Cultivator by  
Mrs. C. L. Gardner

#### Gems

One cup Graham flour, one-half cup rice flour, two teaspoons baking powder, one-fourth teaspoon salt, one egg, three-fourths cup milk, one tablespoon Crisco, melted and stirred in last. Bake in gem pans in brisk oven.

#### Raisin Pudding

Two cups seeded raisins, one cup hot coffee, two tablespoons Crisco, two tablespoons molasses. Let these ingredients boil gently together for five minutes, then set aside to cool.

One-fourth cup of whole wheat flour, one and one-fourth cups rice flour, two teaspoons baking powder, one teaspoon soda, two teaspoons cinnamon, one-half teaspoon cloves. Sift these dry ingredients together three times, then add the wet mixture when cool. Mix thoroughly, then put into baking powder tins and steam two hours.

#### Cookies

One and one-half cups white flour, one-half cup rice flour, one-half teaspoon salt, three teaspoons baking powder, two eggs, one cup sugar, six tablespoons milk, two tablespoons Crisco. Sift dry ingredients together two or three times. Beat eggs and

## "—use foods that require less sugar"

**THIS** is one of the most important recommendations of the Food Administrator: "In cooking and baking use foods that require less sugar."

In other words—use Ghirardelli's. Use it freely and wisely—in place of other less nutritious and more expensive foods. Not only will you save money but you will help in food conservation.

Cooking and baking require less sugar when you use Ghirardelli's. Because—it contains in itself the sweetening flavor you need. More than this—it adds a new touch of richness to your icings, your puddings and other desserts.

In ½ lb., 1 lb. and 3 lb. cans; a  
tablespoonful—one cent's worth—  
makes a cup.

D. GHIRARDELLI CO.

Since 1852

San Francisco

**Ghirardelli's**

LOS ANGELES

sugar together until light, then add milk and flour alternately, stirring in the melted Crisco before all the flour has been added. Flavor as desired. Drop by spoonfuls on well greased pans and bake in moderate oven. Chopped raisins are an improvement.

### TRY THEM

#### Corn Meal and Rice Waffles

One-half cup corn meal, one-half teaspoon soda, one cup boiled rice, one teaspoon salt, one-half cup flour, one tablespoon melted butter, two eggs, well beaten, one cup sour milk.

Sift together the flour, soda, and salt; add the other ingredients and beat thoroughly; have irons hot and well greased.

#### Gem Crackers

Sift one and one-half pints of flour, one-half pint corn meal, one teaspoon baking powder, and the same amount of salt. Rub in two tablespoons butter, two-thirds of a pint of milk; work into a smooth, fine dough. Place on bread board, kneading a few times and roll to quarter-inch thickness; cut with a small oval or round cutter, lay on greased baking tin, puncture the top of each cracker with a fork, brush over with milk, and bake in hot oven.

#### Corn Meal Puffs

Into one quart of boiling milk stir eight tablespoons of meal, four tablespoons powdered sugar, and one teaspoon nutmeg. Boil five minutes, stirring constantly. Remove from fire and

when cool stir in six well beaten eggs. Mix well and pour the mixture into buttered cups, nearly filling them. Bake in moderate oven one-half hour. Serve with lemon sauce.

#### Corn Meal Biscuits

One cup yellow corn meal, two cups peanut cream, two teaspoons salt.

Put the meal into a shallow pan and heat in oven until it is a delicate brown, stirring frequently. Make the nut cream by mixing peanut butter with cold water and heating. It should be the consistency of thick cream. While the nut cream is hot, stir in the corn meal, which should also be hot. Beat thoroughly. The mixture should be of such consistency that it can be dropped from a spoon. Bake in small cakes on a greased pan.

If preferred, these biscuits may be made with cream or with butter in place of peanut cream, and chopped raisins may be added, one cup being the allowance for the quantities given above.

#### Delicate Indian Pudding

One pint sweet milk, two tablespoons butter, three eggs, four tablespoons sugar, two large tablespoons corn meal, salt.

Boil milk and sift meal in slowly; add butter, sugar, and salt. Set aside to cool, then add beaten eggs. Put in baking pan and cook for three-quarters of an hour.

Wars leave scars, but an unrighteous peace is an open wound.—Youths Companion.

##### Another Bread Crumb Recipe

I have read the many uses for stale bread but have not seen this one for steamed pudding published:

Two cups toasted bread crumbs soaked in one cup sweet milk ten minutes, half cup syrup, one tablespoon powdered chocolate, half teaspoon cinnamon, one egg well beaten, one cup raisins, piece of citron cut fine, one level teaspoon soda dissolved in a little water. Steam one hour or more. Serve with hard sauce or any preferred sauce.—A Subscriber.

#### BONNY BRAYS

The new minister was inspecting a Scots farmers' stock, and paused to admire a donkey.

"Fine donkey, that, Mackenzie," said the minister. "What dae ye ca' him?"

"Maxwelton, meenister," was the reply.

"Wherefore that, mon?" cried the visitor.

"Because his brays are bonny," came the answer.—The Fraternal Aid Union.

Lives there a woman who doesn't delight in trying some new dish? I've known tired cooks to declare that they wished they need never again see a cook stove, and in ten minutes their eyes were bright with interest because they were trying a new recipe. I've done it myself, when almost too tired to stand, and when I didn't really need to, simply yielded to the fascination of trying to make something different.

Food should be carefully prepared to fit it to a child's powers and should be served in an appetizing fashion at proper intervals. Young children should not be offered "tastes" of the family meals, as this habit tends to destroy the appetite for the simple, rather restricted diet adapted to their need.

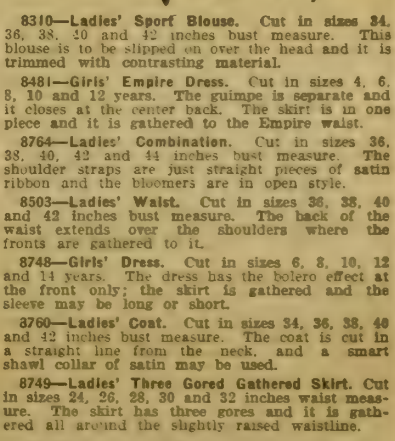

Give the boys and girls a chance to develop their originality and thus prepare them for the duties of manhood and womanhood. They may be better managers than you think they are. It is certain that they will never display any great talent unless you encourage them by placing responsibility upon them.

When new rubbers are bought put a single thickness of leather inside the heel and another outside and then fasten, on the regular heel-plates, which can be bought for a trifle at 10-cent stores. Or you can get a regular cobbler to do this for 10 cents.

When new rubbers are bought put a single thickness of leather inside the heel and another outside and then fasten on the regular heel plates that can be bought for a trifle at 10-cent stores. Or if you can get a regular cobbler to do this for ten cents.

It is far better to overestimate a boy's originality and ability to do a certain difficult task than to underestimate his knowledge, tact and determination, for he will make the greater effort when you believe him competent.

## The Cultivator Patterns

8310—Ladies' Sport Blouse. Cut in sizes 34, 36, 38, 40 and 42 inches bust measure. This blouse is to be slipped on over the head and it is trimmed with contrasting material.

8481—Girls' Empire Dress. Cut in sizes 4, 6, 8, 10 and 12 years. The guimpe is separate and it closes at the center back. The skirt is in one piece and it is gathered to the Empire waist.

8764—Ladies' Combination. Cut in sizes 36, 38, 40, 42 and 44 inches bust measure. The shoulder straps are just straight pieces of satin ribbon and the bloomers are in open style.

8503—Ladies' Blouse. Cut in sizes 36, 38, 40 and 42 inches bust measure. The back of the waist extends over the shoulders where the fronts are gathered to it.

8748—Girls' Dress. Cut in sizes 6, 8, 10, 12 and 14 years. The dress has the bolero effect at the front only; the skirt is gathered and the sleeve may be long or short.

8760—Ladies' Coat. Cut in sizes 34, 36, 38, 40 and 42 inches bust measure. The coat is cut in a straight line from the neck, and a smart shawl collar of satin may be used.

8749—Ladies' Three Gored Gathered Skirt. Cut in sizes 24, 26, 28, 30 and 32 inches waist measure. The skirt has three gores and it is gathered all around the slightly raised waistline.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH.

#### HOW TO ORDER PATTERNS

Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2 cent) stamps for each number. In order to furnish our readers with the very latest New York City styles, all pattern orders are filled in New York City. Therefore, we promise to deliver all patterns ordered within two weeks; we guarantee safe delivery of all patterns. Address

## A Distinguished Line of Pianos

In "straight" Pianos we carry a very comprehensive line ranging in price from \$285 to \$3000—each "make" has been selected by us as the very best of its grade.

In the neighborhood of \$300 we carry the Aldrich, a good dependable piano at a very moderate price—it will give the purchaser excellent service.

From \$375 to \$450 we offer the Stroud, Kurtzmann, Emerson and Estey Pianos—four very substantial "makes" which are giving a life time service in thousands of homes throughout the United States.

From \$450 to \$600 we have the Krakauer, A. B. Chase and Weber—these instruments are high grade instruments, in fact they are old and famous makes.

Then at \$575 and upward there is the Steinway, the Standard by which all pianos are judged—To have a Steinway is to have the Best.

Bear in mind we will arrange convenient terms of payment on any Piano—even the Steinway.

We invite you to call at any of our stores—or write us asking for illustrated catalogues and prices.

We are dealers in Steinway and other Pianos,  
Pianola Pianos, Aeolian Player Pianos, etc.

RICE

By agreement between the growers and millers of rice and the food administration, prices for California rice have been fixed as follows: Paddy rice, \$4.10 per 100 pounds to the growers; cleaned rice, \$7.10 per 100 pounds from the mills to the trade, and \$8.00 per 100 from jobbers and wholesalers to the retailers.

HAY

Under date of March 16, Scott, Magner & Miller says:  
We quote today wholesale prices in carload lots as appear from dealers' transfers upon the hay market. For prices to consumers charges of cartage, commission and handling must be added according to conditions.  
Receipts, 1110 tons. Concessions have had to be made in many cases to effect sales in order to remove receipts from the tracks promptly. Cars have been difficult to obtain at shipping points and although several farmers have signified

their intention of consigning some of their holdings to market to be sold for their account yet few consignments have arrived to date on account of difficulty in getting cars to load. Most of this hay which is offered is that which has been held in farmers' barns to protect their stock against a dry season. Alfalfa is more plentiful than for some time past. Offerings are being made from Oregon, Washington, Idaho and Nevada.

Fancy Wheat Hay  
(light 5 wire bale) ..... 30.00 @ 31.00  
No. 1 Wheat or Wheat and  
Oat Hay ..... 28.50 @ 30.00

Hemp ..... 4 1/2 @ 5 1/2  
Rape ..... 2 1/2 @ 3

Citrus Fruit Market

Los Angeles, March 20, 1918.

Occasional sales of oranges have been made around the \$9.00 mark, and it is generally assumed that long prices will obtain through the entire season. The rain has prevented liberal shipping, but even with better weather the limited supply of oranges in California will prevent large shipments. Some of the Valencias now being sold in auctions are the coming season's crop shipped early, these reaching market before stored Valencias of last season were far out of the way.

The lemon market is still strong though it has not shown the spectacular features of the orange market.

Shipments

Shipments of oranges from Southern California to date since November 1, 1917: 4995; lemons, 1400; total, 6395. To same date last season: Oranges, 12,386; lemons, 2307; total, 14,693. From Central California to date; oranges, 1898; lemons, 110; total, 2008. To same date last season: Oranges, 4045; lemons, 162; total, 4207. From Northern California to date: Oranges, 202; lemons, 842.

AT THE AUCTIONS

Boston: 2 Nav. 2 lem. Nav. 5.70-7.15, lem. 5.75-6.55.

PARTIAL LIST OF FRUIT SHIPMENTS

From post card reports to the bureau of markets United States department of agriculture, Miss Hoey makes report of the following shipments from California for the week ending March 11: Apples, 5 cars; artichokes, 2; beans, 13; cabbage, 12; carrots, 3; cauliflower, 159; celery, 31; green peas, 1; fresh pears, 1; dried apples, 1; dried apricots, 2; dried beans, 21; dried peas, 3; dried peaches, 8; dried prunes, 23; lettuce, 176; mixed vegetables, 88; mixed fruit and vegetable, 10; mixed fruit, 5; onions, 27; potatoes, 124; sweet potatoes, 2; raisins, 53; dried figs, 2; turnips, 6.

For the week ending March 18 shipments were as follows: Apples, 8 cars; artichokes, 2; cabbage, 5; cauliflower, 67; celery, 16; fresh peas, 2; dried apples, 4; dried apricots, 2; dried beans, 8; dried figs, 1; dried peaches, 18; dried prunes, 23; lettuce, 106; mixed vegetables, 93; mixed fruit, 8; mixed fruit and vegetable, 8; mixed dried fruit, 2; onions, 6; potatoes, 71; raisins, 38; Mexican tomatoes, 9; radishes, 1.

The Allies have made further and greatly increased demand for breadstuffs. This because expected arrivals from Argentine failed.

Ventura County tomato growers expect a greatly increased output because their ranks have been increased by former growers of beets preferring to produce tomatoes and Limas rather than sugar under present unsettled conditions.

Imperial Valley is shipping its first summer squash, which is commanding around \$4.00 per crate.

## Men of the farms—get a maximum tire value at once

THERE are all kinds of tire values. You can have small value, moderate value, or top-notch value in Most Miles per Dollar. The choice is yours. Don't blame anyone but yourself if you choose tires carelessly and pay the penalty in tire disappointment.

These are the reasons why Firestone Tires come up to the 100% mark: In the Firestone Fabric Tire: tougher tread; more cushion stock; more rubber between layers; reinforcement in side wall. In the Firestone Cord Tire: numerous walls of stout cord; each cord imbedded in pure gum; reinforced bead; hinge thrown high where strain has least effect.

Don't be content with anything less than this tested Firestone construction and the resulting advantages. One Firestone Tire will lead you to become a Firestone enthusiast.

and *LIVESTOCK* and *DAIRY JOURNAL*

An Illustrated Weekly Magazine

Devoted to the Rural Home and Ranch

LOS ANGELES

March 30, 1918

SAN FRANCISCO

It has been said that "a good dairy cow will make four times as much human food from a given amount of feed as will a steer."

**W**AR is making bare the world's cupboards; the granaries are being emptied, the flocks thinned, the herds butchered, the mines scraped. War is making everything dear except human life; the destructive monster is consuming more food essentials than it is producing. Want follows hard in the wake of the chariot wheels of Mars, and the whole world is threatened with hunger, the menace of which will become greater with the prolongation of hostilities. Victory will go to the combatants who are best fed and nourished. The food question is now paramount. Food production is as essential to victory as food saving. . . . The spade and the hoe must befriend the rifle and the bayonet.

But more than all, to keep the folks behind in working order we need more milk and milk products. We are saving our best cereals to send to Europe, but at home, and especially for growing stronger and better American children, we need more and better milk.

David T. Houston, secretary of agriculture, recently made this statement: "I cannot emphasize too strongly the urgent necessity, during war time, of increasing the production of butterfat, and of saving it for human consumption."

# Wade's Drag Saw More Than Pays for Itself in One Season

## —saws 25 cords in a day

HUNDREDS of WADE Gasoline Drag Saws are making light work of sawing logs into short lengths for farmers all over the West. It is the most popular farm machine that has ever been put on the market, because it is a big time, labor and money-saver. The initial and upkeep costs are almost nothing when compared to the immense savings it makes for you in a single season.

The New 1918  
Model of the  
**WADE**  
DRAG SAW  
is Now Ready

All 1918 Model Wade Drag Saws are to be equipped with our new improved 4 H. P. ENGINE—we have INCREASED the HORSE POWER of the engine WITHOUT INCREASING THE COST. This 4 H. P. Engine gives you an abundance of power and, therefore, a greater output per day—be sure to get a WADE—accept no substitutes.

The WADE is made of the best materials throughout, and the whole machine is constructed for hard work in the woods—practically never gets out of order, and is always ready for use. The husky little 4-H. P. engine used on the Wade fairly hums the 6-ft saw through your toughest logs. (Larger saw blades on special order.)

Wade's  
Gasoline Wood Saw  
(Portable)

**\$165 DELIVERED**  
Anywhere in the U.S.A.

1918 Model with 4 H. P. Engine

One man can move the WADE along the log, while two men can easily move it from log to log. It weighs only 285 pounds complete. The WADE is especially low in upkeep cost and gasoline used—the tank holds two gallons (enough to cut 16 to 20 cords). It is the cheapest, easiest, fastest way for you to saw your logs.

## Does 10 Times the Work of 2 Men!

Think of it! TEN TIMES as much as two men can do! The WADE will easily cut 25 cords of wood in one day.

Can you afford to pay for slow, expensive day labor when you clean up with a WADE the same amount of work in one-tenth the time?

Fuel and labor are higher than ever before—and present conditions indicate that they will continue so for a number of years—get a WADE Drag Saw and keep your labor costs down and sell your wood while it is high in price.

A good many WADE Drag Saw owners are making good money by helping their neighbors saw their wood.

Send today for this interesting booklet, "How Dan Ross Saws Forty Cords a Day." Dan Ross lives at Corbett, Oregon, and has used a WADE Drag Saw ever since they first came out. You will profit by reading his experience.

## Silos Necessary for Economical Production

C. L. Hughes Writes of the Necessity of Present Day Dairying and the Advantage of a Certain Supply of Cheaper Feed

**T**HE Cultivator invites me to write upon the subject of silos and silage feeding in California, a subject that in its present state of development in this state deserves treatment at far more capable hands than mine, yet it is possible that the particular

the cause was uncovered it might be corrected, a big demand created for pure bred breeding animals, multiplication and expansion of breeding herds, thereby creating an avalanche of advertising contracts and a whale of a bank roll for the publisher.

Since my investigation everything has come to pass except the avalanche and the bank roll for the pub-

lisher, although it pleases me that more than one breeder and livestock farmer has personally thanked me for some of the information I dug up and published.

I determined to seek my informa-

go out and buy another bunch of scrubs next year and begin all over." That reply didn't make much of an impression on me at first, but after it had been repeated in substantially the same form by possibly a hundred dif-

angle from which I have observed the development of the silo as a necessary part of equipment on a modern California livestock farm may have produced conclusions that will be of value to others viewing the subject from other angles.

### Where the Weakness?

Necessity first caused me to search for a cure for a fundamental weakness in California livestock practice. When I undertook the publication of a livestock journal in California some years ago the following facts faced me as a result of some little investigations I had made:

First, in the nature of things I must look to the advertising of breeders of registered animals as the source of one of my greatest items of publishing income.

Second, the history of livestock breeding in the state showed that no great breeding establishments had been built up. Many men of wealth had invested large sums in registered breeding animals imported from the East and from foreign countries, but so far as I could learn not a single one of them had made a large financial success of his operations as a breeder.

Third, the reason for this lack of success and expansion of high class breeding establishments seemed to be lack of desire on the part of California livestock owners to breed up and improve their herds, making small demand for high class pure bred sires from the breeding establishments and very low prices even for the limited demand.

### Whale of a Bank Roll—Not

Therefore, from entirely selfish motives, I set out to find out why there was so little demand for pure bred breeding stock, to the end that once

tion by making personal visits to a large number of livestock farms, and to that end started out about the first of January, 1913. Which date reminds me that only five years have passed since then and that things have moved in California livestock farming during that short period.

### A Four Month's Trip

I first visited some of the Coast counties, then coming back to the interior started in at Red Bluff and zigzagged southward until I had reached Mesa, Arizona, spending about four months on the trip.

I saw many a herd of scrub cattle on that trip, both beef and dairy stock, and the first question I asked the owner of such a herd was; "Why don't you buy pure bred sires and grade up your herd?" The replies were varied, but before I had progressed very far I found one reply that seemed to be made more frequently than others, and that would be something like this; "Well you see we have a dry year around here about every so often, and when it does come I have to sell off my cattle for what I can get for them. If I should use pure bred sires and start to breed up my herd I wouldn't get anywhere, for about the time I had a good bunch of three-quarters or seven-eighths full blood young breeding females on hand, along comes a dry year and I would have to sell them for a song and then

ferent dairymen and range men in different localities it began to sink in.

### Stabilize or Go Broke

By the time I had worked from Red Bluff to Sacramento I had become convinced of one thing: That before substantial progress could be made in breeding up the cattle of California there must be a radical change in existing methods of crop farming and there must be some plan devised that would overcome the menace of dry years, lack of feeding, and selling of cattle at ruinous prices. In other words some great source of cattle feed must be developed to stabilize both the beef and dairy industries to the end that farmers might breed up their herds through the use of pure bred sires and be able to retain possession of those herds a sufficient number of years to benefit from the production of high grade cattle.

### Silos—There's the Solution

About this time there came to my mind a picture of the dry, burned-up, hilly, summer pastures of my boyhood, yet there were no starving cattle in the picture, for down by the barn was a silo nearly full of sweet, succulent corn silage. But no such picture had yet been conceived in a broad way in California, and so many farmers had told me that corn could not be successfully raised in the state that I had come to believe it.

## Prince Gelsche Walker Korndyke

He is brother to Miss Valley Mead De Kol Walker, who holds two world's records as a senior two and junior three year old, and won first place in the recently closed California Dairy Competition over all breeds, and another sister Lady Hiske Walker, made over 34 pounds butter in seven days as a junior four year old, a state record. His calves are being called for from every direction. We haven't today anything in our herd in the bull calf line over six months old. Don't you think it would pay you to raise a young bull calf for a future herd sire, especially if you can get him at a very reasonable price?

## King Korndyke Pontiac

is shown below, and he is the sire of the \$6500 bull King Korndyke Pontiac 20th, sold in the Guaranty Sale. Wouldn't you like to own a young brother to the highest priced bull ever sold on the Pacific Coast? We will sell you one at a price that will really surprise you, and which we will gladly give on application.

**JOHN LYNCH RANCH**  
Petaluma, California

Yet I found grounds for doubt about the truth of the popular opinion in regard to corn in California, for had I not recently seen with my own eyes a silo full of corn that had been grown on the top of an unirrigated hill in Santa Cruz County?

Anyhow the silo idea persisted, and to the other subjects under investigation on the trip I added corn and silos, and between Sacramento and Mesa, Arizona, I went to see every silo of which I could get information, and on the whole trip found only a few over 30. I also found some highly illuminating facts on the raising of corn for silage in California, and long before the trip was ended I felt absolutely sure that of all the great agencies that must be made to operate toward the betterment of California livestock farming, the silo was the one great stabilizer that would make safe the business of the dairyman and beef

course of my travels I came across a bunch of these half starved beasts my eye almost unconsciously sought out in the lands of that farm a spot that would look likely for a crop of ensilage corn.

Of types of silos, crops for silage, methods of feeding, I offer no advice or comment beyond the statement as an established fact that there are many silage crops that have already been successfully grown in this state, many feeding methods that have proved successful in practice, practically every section of the state has been proved capable of raising silage corn that will go from 12 to 30 tons per acre, and that in view of these facts it will before very many years be a sign of improvidence on the average California livestock farm if no silo appears in the equipment, for it must ever be kept in mind that the function of a farm animal is to convert

A Humboldt County Dairy

The dairy of 37 cows of Iver Iversen, which proved a winner in the 25 to 50 class in the State Cow Testing Competition.

raiser and thereby bring about widespread expansion and greater financial returns in the breeding of pure bred registered cattle.

#### Biggest Thing in California

Today I believe more fully than I did five years ago that the silo is the biggest thing in California livestock feeding practice. Farms in some sections may get along without silos, as they have done for years, but I doubt if there are any farms operating even a modest herd of cattle that would

the grasses and grains grown on the farm into other forms suitable for marketing to human needs, returning to the soil the rich soil fertilizing elements not converted into meat, wool, or milk, and silage has been proven one of the very greatest and most profitable home grown crops.

#### A Prophecy

Thus has my course of reasoning led me to the silo, that the livestock farmer may prosper and use pure bred sires to bring about greater pro-

Dairy Made Men

not show better profits through the feeding of silage. But it is, in a consideration of the great cattle business of the state as a whole that the silo assumes its real proportions and appears as the great stabilizer of the business, for no industry as a whole can possibly prosper in the fullest sense if some of its units are subject to periodical disaster, and a dry year in California is certainly a disaster to the cattle owner without feed.

perity for himself and business to the breeder of registered animals, for in livestock farming the silo, pure bred sire, and prosperity are closely bound together in my mind.

There is danger and no honor in prophesying, but I am willing to risk this: Not long hence when the California livestock farmer goes to his banker for accommodation he will have two new questions to answer. "Do you use pure bred sires?" "Do you feed silage?"

#### Thousands Starving

California has only fairly begun to build silos, even though in Tulare County over 100 were built in 1917 and in Stanislaus County over 250 were built in the same year. Cattle suffered for want of feed in some sections of California this year, and again many owners sold at prices that meant heavy losses. While reports of conditions perhaps in many instances left exaggerated impressions, yet it is true that there were thousands of hungry cattle in the state toward the end of the sustained dry season, and somehow when in the

## Dairy Farmers Conference

Written for California Cultivator By C. A. Briggs

**R**EGULAR California weather, sunny skies and springlike air made the meeting of the state dairymen an ideal one as to outside conditions. The enthusiasm of the men attending and intense interest in every bit of the two days happenings, which were crowded with events of value to all, made this, perhaps, one of the most valuable meetings that has ever been held in the state. The competition for points and awards, extending as it has over many months, has kept the contestants under a strain which was relaxed at the meeting, and every one went in for a good time. Those attending were among the leading and best dairymen in the state, the men representing grade herds and those owning registered stock being of about equal number.

Dean Van Norman made the opening address, followed by Prof. Woll, who has conducted the competition from its start to the finish, with an able paper on "War Time Rations for the Dairy Cow." S. H. Green presented the creamery side of the question and urged a personal interest in this branch of the business by all dairymen. C. L. Roadhouse spoke on the production of market milk. Prof. Gordon H. True's lecture on "Conformation and Production" was given in the open air at the farm barns, with types of dairy cows and offspring to point the moral. Prof. Woll's paper at the evening session reviewed in detail the entire work of the dairy cow competition.

Following this Dean Hunt made a presentation speech in which he said that he was only acting as a steward to represent those who had so generously given splendid presents aggregating over \$7500 to show their interest in and promote the great dairy industry of the state. The audience broke out in applause as each name was called and the award given to the fortunate winner.

A. W. Morris, the veteran breeder, made the closing talk, thanking, for himself and all the other contestants, the generous spirited donors of the prizes and stating that he considered that the competition just closed marked the beginning of an epoch of great development in a great state industry.

On Saturday the prize winners gave ten minute talks on "How My Cows Were Fed and Handled." A. L. Ingebritson spoke on "The Supervisor of Dairy Tests." C. V. Castle read a splendid paper on "Raising Dairy Calves." Frank L. Morris spoke on "The Breeding of Pure Bred Dairy Stock." This completed the morning session.

In the afternoon F. M. Hayes gave a lecture and demonstration on "Diseases of Dairy Cattle, Tuberculosis and Abortion." The most impressive thing at this conference was the intense interest manifested by all; the countless questions asked of every speaker, and the valuable information given out.

It is perhaps hardly necessary to say that those competing have received in every case ample reward for efforts. Far in excess of any awards won is the better knowledge gained of chosen business and of the possibilities that lie in themselves, farms and herds. Every man in the dairy business in the whole state, whether he won a prize or not, has profited, and the business itself is on a firmer foundation because of this competition and this very successful meeting.

### THE CALIFORNIA STATE DAIRY COW COMPETITION

**D**URING the past quarter of a century the main dairy breeding associations in this country have established what is known as an advanced registry, or Register of Merit, for cows of their respective breeds, based on the production of the cows in so-called official or yearly tests. An early effort was made by one of the associations to conduct such tests by a committee of their own, but the result was not satisfactory, and it was not until after the Babcock test for determining the fat content of milk had been published and been accepted

as correct by dairy authorities and breeders of dairy cattle, that tests for the production of milk and butter fat were placed on a sound basis. The agricultural colleges from the beginning encouraged the testing of cows and sent members of their staffs to the farms of breeders and dairymen to conduct tests of short duration. The seven-day test gradually became adopted as standard among Holstein breeders, and in 1894 the H. F. Association established its advanced register to which cows were admitted that produced above certain minimum amounts of butter fat in tests conducted by an officer of the experiment station or agricultural college. The American Guernsey and Jersey Cattle Clubs after a few years followed the example set by the partisans of the black and white cattle, and all the different dairy breeds, with some classed as dual purpose breeds, have

now provided for an advanced registry of their cows on the basis of tests conducted under the direct supervision of the agricultural colleges or stations. The work that was thus originally taken up by these institutions as a voluntary educational effort before long became a regular feature of their activities and has increased in importance with every year until today it is difficult to conceive of its being given up or turned over to other agencies.

The system of advanced registry testing is of value to the individual breeder because it gives him definite information as to the production of his cow, and he can point to the records of production made in these official tests with perfect assurance that the dairy public, including prospective customers, will accept them on their face value and will pay prices for his stock according to the records made by the cows or by their near relatives. It enables the breeder to determine the influence of the bull on the dairy production of his offspring, and thus makes progress possible. It is

inconceivable that the cow producing over 1200 pounds of butter fat in a year, or over 40 pounds in seven days, would have been developed but for the invention of the Babcock test or some similar practical method of determining the per cent of fat in milk and the subsequent establishment of the A-R system by the various breed associations. Of far greater importance than the development of these phenomenal cows, however, is the gradual improvement of common or grade herds by the use of pure bred sires whose dams have proved their dairy capacity by a production considerably in excess of that of cows in dairy herds. For, as is often stated, the bull is half the herd and frequently more, and if he can raise the standard of production of his daughters above that of their dam, say by only 50 pounds of butter fat per head a year, which is not an uncommon experience, it will mean much to the individual dairyman, and in the aggregate will add millions of dollars to the dairy industry of the state.

### King Korndyke Pietertje Pontiac, 127387, Born April 24th, 1912

Some of the Best California blood flows in his veins

In consigning this bull to the seventh semi-annual sale of the Association, we are offering the breeders of the Pacific Coast and the Northwest, a rare opportunity to buy at their own price a proven sire of the very choicest breeding. In addition to being a superb individual weighing 2400 pounds, he is a son of the mighty King of the Pontiacs and May Korndyke 2d, one of the good cows of the A. W. Morris & Sons herd of Woodland, California. King of the Pontiacs, as all posted Holstein breeders know, is the leading sire of dairy cattle; no sire, of any breed has near approached him. His list of 233 A. R. O. daughters, numbers nearly 100 more than that of any other sire; his nearest rival being his own sire, Pontiac Korndyke, having 145 A. R. O. daughters to his credit. King of the Pontiacs' 30 pound list numbers 21 daughters; and here again his sire Pontiac Korndyke stands second, credited with 16 30-pound daughters. Not satisfied with having the largest list of A. R. O. and 30-pound daughters, King of the Pontiacs is the sire of King Pontiac Konigen, the only sire having a 40-pound daughter, whose sire and grandsire each has one or more 40-pound daughters; and to go further, King of the Pontiacs and his sire, Pontiac Korndyke, are the only sires, each having 40 daughters averaging 30 pounds. Space will not permit further details of the merits of this great sire, only to mention that he has 129 proven sons, and 62 producing daughters, entitling him to the credit of being the greatest transmitting as well as the greatest producing dairy sire that the world has ever known.

May Korndyke 2d, the dam of KING KORNDYKE PIETERTJE PONTIAC, is one of the good cows of California. She is a 26-pound three-year-old daughter of Beauty Pietertje Prince, 30 A. R. Os. and May Korndyke, the first 30-pound three-year-old, and is the dam of Prince Geische Walker Korndyke who sold for \$4,000 at public auction in California three years ago, the highest price paid at auction in that state up to last December when King Korndyke Pontiac 20th, a yearling son of the twin brother of KING KORNDYKE PIETERTJE PONTIAC, brought \$6,500. While May Korndyke 2d was last under test she was producing at a rate that indicated she would go well over 30 pounds. Unfortunately she met with an accident that obliged her owners to abandon the test. We are advised by her owners that when she next freshens she will again be tested.

For tabulated pedigree of KING KORNDYKE PIETERTJE PONTIAC, see sale catalog, which will show that on his dam's side he is a grandson of Clarissa Clothilde Pietertje, 32.52 pounds butter from 679.2 pounds of milk in seven days, and Job Gelsche De Kol Burke, the best producing son of old Prilly, queen of dairy cows, and the greatest transmitting cow of the breed through her six A. R. O. daughters and her three proven sons. Prilly and her six daughters, all but one, have records above 25 pounds. See article "Prilly, the Greatest Transmitting Cow," in March 2d issue of Holstein-Friesian World.

KING KORNDYKE PIETERTJE PONTIAC is a helper breeder, over 80 per cent of his calves being helpers. Of his 50 daughters only three, so far, have been officially tested. Those not yet in milk are developing splendidly and have every indication of becoming heavy producers.

From a letter just received from A. W. Morris & Sons, the California breeders and the owners of May Korndyke 2d, we quote as follows:

"The twin brother to your bull KING KORNDYKE PIETERTJE PONTIAC, now owned by Mr. F. W. Kiesel, Sacramento, California, is one of the most popular sires in California. Mr. Kiesel recently told the writer that he would refuse \$5,000 for him. One of his sons, King Korndyke Pontiac 20th, sold in December sale at Sacramento for \$6,500. His daughters are showing up splendidly, and while he has had little service and none have really had an opportunity, they are very promising and we are confident that he is a great bull. With all that has developed on his sire's side, it would seem that your bull should bring a good figure."

This is a rare opportunity to acquire, at your own price, a proven sire that already has a large list of maturing daughters, from high record dams that should develop into heavy producers.

The quality of the consignment of heifers and cows far exceeds the average of any previous sale, there being consignments from such important herds as Hollywood Farm, Carnation Farm, Wm. Bishop, Donnybrook Farm and from six other large breeders, including one complete dispersion sale. It is an excellent opportunity to secure choice breeding and A. R. O. stock.

Remember the date, APRIL 17th, 1918, and the place, KENT (NEAR SEATTLE) WASHINGTON.

# AJAX TIRES

GUARANTEED IN WRITING 5000 MILES

## Dirt Track Champion of America

Special  
Patented  
Feature

Ajax  
Shoulders  
of Strength

Nation-wide victories won for Ajax Tires the *Dirt Track Championship of America*. State Fair crowds from Texas to Massachusetts witnessed these Ajax triumphs.

These dirt tracks are country roads with a fence around them. Ajax victories on them mean Ajax service for you. On proved performance Ajax Tires become your natural selection—the sure service, money-saving tire for the farmer.

### SHOULDERS of STRENGTH

The picture shows you Ajax Shoulders of Strength—a special patented feature found only on Ajax Tires.

These Shoulders of Strength give more tread on the road—more rubber where it should be—mean added wear—more miles. Because of them road friction is evenly distributed over the entire width of the tread instead of centering in one spot and wearing through to the fabric.

### AJAX ROAD KING

"More Tread on the Road"

In competition ON THE ROAD, Ajax Road King will prove its superiority. Built for city streets or farm highways. Note triangle barb tread—an added safety factor.

### 97% Owners' Choice

This huge percentage of Ajax total factory output goes to car owners as their individual choice over other tires that came with their cars.

Ajax Tires—Ajax Inner Tubes give real service. Booklet on Ajax Shoulders of Strength mailed free on request.

## Prune and Apricot Growers Organization

If the California Prune and Apricot Growers, Inc., is to exercise its corporate rights, become first hand packers of our growers' deliveries and develop the policies to govern our future manufacturing sales and advertising operations, we must continue to control in marketing our production. We have many thousands of acres of young orchard coming into bearing in the next few years; also many bearing orchards not yet joining in the support of our future aims and purposes. We have made such a success of our first year's operations, that our continuance as a successful commercial concern is assured, so far as ordinary business details go. But if we are to become the dominant influence on markets at all times and reap the advantages of such a position, we must secure and maintain greater and greater control of the production.

We now have under way a plan to own and operate a good percentage of our packing facilities before the 1918 harvest. We have similarly important plans and policies mapped out for the advertisement and sale of "Sunsweet" prunes and apricots, where many other brands are now offered.

We shall be able to go forward with these plans according as we can secure the signing and support of greater acreage.

In order, however, to properly develop and maintain markets and put forward the merchandising, advertising, and sales campaign that we plan, we are soliciting a greater cooperation of growers. Seventy-five per cent of the production means that we have three tons to every one ton applied in an antagonistic manner in the market. You can readily appreciate that under some very serious conditions which might arise some seasons, the one ton would be a serious factor opposing our aims and purposes. You can also readily appreciate the vast difference that would accrue from the control of 15 per cent more of the production. The association would then hold nine tons for every one ton in the hands of our competitors, and in this case the one ton, even in the most trying times, would certainly be a negligible quantity.

During the spring we will hold meetings in all principal fruit districts for the better information of our growers. In the meantime, anyone desiring to make inquiry into detail or general features of the association operations and future aims will receive prompt attention by addressing Organization Department, California Prune and Apricot Growers, Inc., San Jose.

## Control of Western Blight of Tomatoes

Preventive measures that should be taken against summer blight of tomatoes, a troublesome disease which occurs in the Rocky Mountain and Pacific states, are described in a recent statement from the United States department of agriculture. The disease, federal specialists explain, is distinguished by a marked upward and inward curling of the leaves, by a yellow color of stems and foliage, and by failure of the plants to produce fruit. It is believed to be due to a soil fungus which attacks and kills the feeding roots. This parasite can live on organic matter in the soil and is beyond the reach of sprays. Control, therefore, is difficult and has not yet been fully accomplished. The following precautionary or preventive measures are advised:

Grow the tomato seedlings in soil in which tomatoes have shown no symptoms of the disease or in soil sterilized by steam or boiling water.

There is some advantage also in setting out large plants, as they make considerable growth before the fungus invades their tissues, and therefore produce fruit.

It should also be helpful so to grow the plants that their roots will not be injured in transplanting. Although a parasitic fungus can invade uninjured tissues of its host plant, it usually enters more readily through wounds. If from the seed-bed the plants are pricked off into paper pots, dirt bands, or paper drinking cups without bottoms, they can be grown to considerable size and transplanted to the field without removing the paper or injuring the roots. This is also a convenient and relatively economical method of doing the work.

One of the most effective means of controlling tomato blight is the use of other crops in rotation with tomatoes. As the parasite is unable to live on other crops, it is obliged to exist saprophytically; that is, living on dead or decaying organic matter, in competition with other fungi. This does not entirely eliminate it, but greatly reduces it in quantity. To prevent its accumulation, tomatoes should not be grown on the same land oftener than once in four or five years.

The breeding of blight-resistant varieties is the most hopeful means of controlling this disease. Some preliminary tests of resistance are now being made with a view of developing a resistant variety, but every grower should also make selections for himself. Select from a badly infested part of the field only the plants that are free from the disease,

and plant the seed of each selection in a separate row or plot. Determine the relative merits of the selections from the average disease resistance and yield and quality of fruit of their progeny. Do not mix selections nor save seed from any but the one that transmits the most desirable qualities to its progeny. When this is found multiply it and use it as seed for the field crop.

### FARM MACHINERY CARE

Because of shortage of labor in many communities, the need for speeding up food production, the scarcity of materials which enter into the manufacture of farm implements and machinery, besides manufacturing and distribution problems incident to the war, special efforts should be directed at this time toward more efficient conservation of farm equipment.

A great deal is said concerning proper oiling of machinery, and too great emphasis is not apt to be placed upon this important factor. Greases and oils of good quality should be freely used, the old saying that "oil is cheaper than machinery" being very true. Bearing surfaces should be kept clean, and it should be remembered that a mixture of sand, dirt, fragments of metal and oil make a very efficient grinding material. Gummy material may be removed with a little kerosene.

It is well known, but too little realized, that proper adjustment of moving parts is fully as important as oiling, especially with fast moving machinery. A loose bearing is more damaged by a few hours run when out of adjustment than by several months operation when fitted snugly.

A third factor in the care of machinery is protection from weather. All metal parts which are likely to corrode should be coated with paint or grease. Plow shares and moldboards should be thoroughly cleaned and smeared over with axle grease, crude oil, dirty motor oil or any other heavy bodied grease as soon as it is removed from the field. Rust pits will form in a few hours if iron is not protected, and corrosion assists rapid wear and weakens machinery very quickly. Wooden parts frequently should be coated with a good quality of paint as checks caused by sun and rain, result in much trouble. Both wood and iron should be protected by sheds.—H. C. Heald, University of Arizona Agriculture Experiment Station.

You can't spend your money and save it too! Buy war savings stamps!

QUICK AND ECONOMICAL TRANSPORTATION

## Nash Trucks Cut Down Your Time to Market

Truck gardeners all over the country are cutting down their time to and from market by hauling their loads with Nash trucks.

With Nash trucks, they can carry bigger loads, leave home later and get back earlier. Distance to and from town is changed almost from a matter of miles to a matter of minutes.

The Nash two-ton capacity, rear driven truck is admirably suited to this work.

It is staunch and powerful and most economical in operation.

That Nash trucks are equipped with

## Plant Trees and Get Perfect Stand

**If you use some of the high grade stock we are holding dormant in our cold storage plant.**

We do not attempt to hold our trees back by the popular practice of pulling them from the trenches and airing the roots until they can't start properly.

Instead we give them *December temperature* until the planter is ready. Then when they are planted in dormant condition they spring into life with all of the energy nature has stored in them.

This is not an experiment. We know that the results will be very gratifying to the planter and we stand behind every delivery we make.

We have nearly a hundred thousand fine trees being held in perfect condition until land is ready to receive them.

In this stock are included a good supply of

<b>Almonds</b>	<b>Apples</b>
<b>Peaches</b>	<b>Cherries</b>
<b>Apricots</b>	<b>Plums</b>
<b>Prunes</b>	<b>Nectarines</b>
<b>Pears</b>	<b>Walnuts</b>

At our citrus nursery at Avocado, Fresno County (where there is no frost) we have a good supply of

**Oranges Lemons  
Pomelos**

Also a fine lot of olives in Mission and Manzanillo varieties.

**Prompt Shipments. Fine Stock**

Kirkman service gives the planter a satisfactory orchard.

**KIRKMAN NURSERIES  
FRESNO, CAL.**

Established 1888.

## Increase the Organic Matter

FARMERS in semi-arid countries always have one soil problem difficulty to solve. That is, securing humus or vegetable mold which makes for better physical and chemical conditions. Stable manure is high of price and impossible to get in quantity required by our fields. Green manure offers only a partial solution, though of such great value that it must be availed of whenever possible. This soil need has caused many to inquire as to the value of sawdust or planer shavings, or any type of wood waste. Many orchardists have resorted to the cutting up of prunings and scattering on the soil. Such a method of securing humus, like that of securing phosphorus from untreated bone and phosphate rock, is slow but sure and effective. In the matter of shavings, however, it is well to give warning regarding freshly made planer shavings of redwood. In these there is a tannin or at least some substance which has an injurious effect if the shavings are applied freshly from the mill. We recall that many years ago we saw a number of orange trees seriously injured by a heavy application of these freshly made shavings. Some have maintained that this injurious effect can be done away with if a few months exposure to air and water precedes application to the soil. We have not heard this point raised as to Oregon and other pine which decompose quickly and make a magnificent humus builder. As to the amount of humus furnished by different substances we will furnish the following estimate: It requires, according to Snyder, 32.7 tons of cow manure, 24.5 of green clover, or 5.5 tons of straw to make one ton of humus; then to increase the humus content of our soils by one-quarter of one per cent

would call for an application of: 82½ tons manure at a cost applied of about \$3.50 per ton, \$288.75; 61½ tons green clover, which the citrus grower cannot produce; 13½ tons straw at a cost applied of about \$17 per ton, \$233.75; 13½ tons shavings at a cost applied of about \$8.50 per ton, \$116.90.

It is therefore quite clear that the shavings, which contain but slight amounts of plant foods, released plant foods contained in the soil and in decaying and forming humus made conditions more favorable to bacterial activity, and that the nitrogen required for the greater growth made was supplied by nitrogen gathering bacteria. In other words, the nitrogen was manufactured in the soil; it was not purchased and applied.

This being the case, the grower who understands the fundamental principles of soil fertility and soil improvement will readily recognize the advantage of following the teachings of Hopkins; "That the material that will furnish the need at least expense and trouble is the material to use."

The value of shavings has been clearly demonstrated by E. P. Haskell of Montebello: In 1914-15, Mr. Haskell applied about nine tons of Oregon pine shavings to seven rows of orange trees, about 1½ acres. The soil of these seven rows and of the adjoining rows was the same. There had been no difference in the growth of the trees prior to the application of the shavings. Methods of cultivation, irrigation and fertilization have been the same throughout the grove (55 acres). After the application of shavings the trees of the seven rows grew more vigorously and produced more fruit. Today, four years after the application was made, these trees are considerably larger than any trees in the entire 55 acres.

## Bulletins

A bunch of especially interesting bulletins is now available, issued by U. S. D. A. One of interest to all live stock men is:

"A Method of Calculating Economical Balanced Rations," It is Bulletin 637 of U. S. D. A., Office of Farm Management. Others are:

Farmers' Bulletin 799, "Carbon Disulphid as an Insecticide," written by W. E. Hinds.

Farmers' Bulletin 899, "Surface Irrigation for Eastern Farms," is by F. W. Stanley.

Farmers' Bulletin 904 is of value to all of us, "Fire Prevention and Fire Fighting on the Farm," by H. R. Tolley and A. P. Yerkes.

Farmers' Bulletin 909, "Cattle Lice and How to Eradicate Them," by Marion Imes, gives full description of cattle lice and methods of control, or rather eradication, for eradication is aimed at with this pest.

Farmers' Bulletin 914, "Control of the Melon Aphid," which attacks cucumbers, melons, other cucurbits, cotton, oranges, etc., is by F. H. Chittenden, entomologist in charge of truck crop insect investigations in California. This bulletin, while only of 16 pages, is of practical interest to every producer who has to deal with aphid, and if there is any Californian not acquainted with this pest, let him hold up his hand.

Farmers' Bulletin 915, "How to Reduce Weevil Waste in Southern Corn," by C. H. Kyle.

The Superintendent of Documents, Washington, D. C., can supply the above.

The agricultural experiment station of the University of California is continuing the issuance of helpful bulletins and circulars. The latest distributed are:

Bulletin 291, "The Common Honey Bee as an Agent in Prune Pollination," by A. H. Hendrickson.

Circular 190, "Agriculture Clubs in California," by B. H. Crocheron.

Circular 192, "Cotton in the San Joaquin Valley," by John W. Gilmore.

The state board of viticultural commissioners is also issuing "Bulletin of California's Grape Industry, No. 10."

Other reports which are annuals are those of the state fish exchange of California, state market director of

California, and state council of defense.

The University of Arizona, Tucson, is also issuing a series of Timely Hints for Farmers, usually of about eight pages on the following topics: 129, "Curing Meat on the Farm"; 130, "How Much Seed to Sow"; 131, "Sanitary Water Supply for the Home"; 132, "Hairy Peruvian Alfalfa"; 133, "A Little Farm Well-Tilled"; 134, "Unproductive Soils, Their Cause and Management"; 135, "Soapweed or Palmilla (Yucca Elata) as Emergency Forage."

## ENCOURAGE GARDENING

Los Angeles has one institution which, if it does not stand alone, is somewhat peculiar in some respects. Somewhat less than a year ago a movement was started to promote a general agricultural fair on the old Sixth District grounds, which more recently has been called Exposition Park. One feature of the Exposition fair, now called Liberty Fair, was to be a demonstration garden, which was to be small and an inspiration for the home gardener, but no effort was made to center all the interest in the one plot in Exposition Park. In order to induce as general home planting as possible, thousands of plants were grown and given away to home gardeners. We might almost have said millions of plants were given away, for the number was far in excess of one million. During the month, February 15 to March 15, the number was 115,464. The greatest number of any kind of plant given was onions, 47,000. Others given away were beets, cabbage, cauliflower, kohlrabi, lettuce, etc. Besides this, to families which have no possibility of making garden, and who too often do not have fresh garden vegetables, there were distributed one million heads of cabbage, Brussels sprouts, cauliflower, chard, bunches of onions, radishes, tomatoes, turnips, and many other garden products ready for consumption.

Esparto, Yolo County, is proud of the fact that its entire cotton output of Long Staple has sold for 90 cents per pound. The output, however, was less than three-fourths of a ton.

17. Generator shaft bearings
18. Oil circulating pump
19. Spark plugs

**W**HEN your engine loses power, knocks, bucks and overheats, nine times out of ten it is sediment in the oil that is to blame.

Just look at the long list of vital parts that will quickly show serious wear when sediment is present in any considerable amount.

Ordinary oil cannot resist the intense heat of the engine—200 degrees to 1000 degrees Fahrenheit. It breaks down quickly. The resulting sediment crowds out the oil with true lubricating qualities from points where it is needed most. Moving metal surfaces, which should always be separated by a protecting film of lubricant, are thus thrown into direct contact.

### Why sediment causes wear

A strong magnifying glass reveals millions of microscopic teeth covering the apparently smooth surface of a bearing or other working part.

When the cushioning oil film between these surfaces is destroyed or excluded by sediment these tiny metal teeth grind together, thus causing friction and wear.

When this happens in any important part of an engine, costly replacements soon become necessary. Damage due to sediment in ordinary oil can never be repaired.

That is why you

A. Ludlow Clayden, Engineering Editor of Automotive Industries, and one of the most prominent engineers in the automobile field says:

"In the past, too little attention has been paid to lubrication. Oil needs to be chosen for an engine almost more carefully than food for a child."

P. M. Heldt, recognized authority on internal combustion engines, and author of "The Gasoline Automobile," declares:

"The proper selection of oil for the lubrication of an automobile engine is a very important matter. The grade of lubricant used affects not only the efficiency of the engine but also its life."

Chas. A. Duryea, consulting engineer and a pioneer in automobile construction, states:

"Buying inferior oil is the poorest economy a motorist can practice. Inferior oils must be used in greater quantities and, even then, they increase friction, loss of power, fuel consumption, heat and repair bills. Good oil costs a little more per gallon, but far less per mile."

cannot afford to buy ordinary oil at any price. The cost of using it is appalling, because of its injurious effects on your engine.

### How the problem was solved

As a result of exhaustive research and comprehensive practical tests the formation of sediment in dangerous quantities has been successfully overcome.

Today over a million motorists avoid the sediment menace, with its accompanying troubles and repair expense, and keep their cars running like new, at reduced operating cost, by using Veedol—the lubricant that resists heat.

How Veedol reduces sediment 86 per cent is made plain by the two bottles, showing the famous Sediment Test, at the left of the page.

When figured by miles of service, and not by cost per gallon, Veedol proves much more economical than ordinary oils.

The average motor oil acts like water in a kettle. When water is subjected to intense heat it evaporates as steam. Under the terrific heat of the engine ordinary oil evaporates very rapidly through the oil-filler in the form of vapor.

Veedol not only resists destruction by heat and the consequent formation of sediment, but also reduces evaporation in your engine to a minimum. You will get from 25 per cent to 50 per cent more mileage per gallon with Veedol for this reason.

### Buy Veedol today

Your dealer has Veedol in stock, or can get it for you. If he does not, write us for the name of the nearest dealer who can supply you.

### An 80-page book on lubrication for 10c

The most complete book ever published on automobile lubrication, written by a prominent engineer, and used as text book by many schools and colleges. Describes and illustrates all types of lubrication systems; tells how to keep your car running like new at minimum expense. Also contains Veedol Lubrication Chart, showing correct grade of Veedol for every car, winter or summer. Send 10c for a copy. It may save you many dollars.

## Argentine Ant Control

Its Relation to Mealybug and Scale Infestations. Written for California  
Cultivator by R. S. Woglum.

THE ravages of the Argentine ant in southern Louisiana, so graphically described by writers familiar with conditions in that region, should act as an incentive to horticulturists and others in ant infested communities in this state to adopt control as well as quarantine measures before

periments carried on in 1915 and 1916 at Alhambra, Pasadena, Sierra Madre and Duarte. It also has been observed to bring about excessive infestations of the black and soft brown scales and undoubtedly has a similar effect on various other species of scale insects as well as aphids. In certain southern counties, namely Los Angeles, San Bernardino and Riverside, this ant is known to infest a considerable citrus acreage, and city infestations occur in San Diego and Santa Barbara Counties.

Control of this pest can be effected either by prevention or eradication. The writer, requiring ant-free trees in his preliminary experiments, successfully used bands consisting of a uniform mixture of six parts of commercial tree banding material to one part of finely powdered sulphur. Such bands require regular inspection and occasional refreshing which the busy orchardist might easily overlook with unsatisfactory results. Furthermore in being merely preventive, banding means a continued expense year after year.

Eradication of the ant in infested areas is the ideal procedure. Noteworthy success has been achieved in Southern California during 1917 by the method used very successfully in the Southern states by E. R. Barber of the federal bureau of entomology. This consists of the distribution throughout the infested areas of a poisoned syrup in suitable containers. The syrup slightly modified for use under California conditions is made as follows:

Twelve pounds granulated sugar, seven pints water, one-quarter ounce tartaric acid (crystallized). Boil 30 minutes. Allow to cool. Add water equal to that evaporated. Three-quarters ounce sodium arsenite (chemically pure only), dissolved in one pint hot water. Cool. Add poison solution to syrup and stir well. Add to the poisoned syrup two pounds honey. Mix thoroughly.

The cheapest container is a small paper bag, which is punched with about half a dozen small holes for the entrance of the ants, water-proofed by dipping in molten paraffin, and when dry, provided with a small quantity (about two ounces) of poisoned syrup and a small piece of sponge. The sponge floats on the liquid and allows the ants to feed in large numbers. A small amount of excelsior has in some cases given satisfaction

Paper Bag Poison Container

A paraffined paper bag containing poisoned syrup for ant control in place on a tree.

California's fertile acres are overrun with this most serious pest. It is stated in Bulletin 377 of the department of agriculture, entitled "The Argentine Ant" that as a pest in cities this insect has no equal, invading as it does practically every part of ordinary houses, stores, etc., eating foods, disturbing the occupants, and in badly infested places rendering conditions almost intolerable; so that it is not uncommon to find empty, unrentable houses. In corn, cotton, and sugar cane fields the Argentine ant when present, is constantly attending the aphids and mealybugs, increasing the numbers of these species to an alarming degree, much to the detriment of the plant. In the orange groves of southern Louisiana the ant

Hooverizing Old Spice Can

A two-ounce spice can used as a container for poisoned syrup, showing the method of attachment to tree and the floating sponge.

is reported as the most serious of all insect problems.

In California its presence has been reported from different parts of the state, though attracting attention especially as a household pest in the San Francisco Bay region. Its importance as an orchard pest in the citrus growing regions of this state appears to have been overlooked until the writer conclusively demonstrated its very direct relation to mealybug control as the result of numerous ex-

periments as the most serious of all insect problems. These bags are attached to the trees as shown in Fig. 1. Tin cans have also been used as containers, the most satisfactory type being a two-ounce oblong spice can, as shown in Fig. 2. The ants gain entrance by passing through the enlarged nail hole or through an aperture made by pressing in the top of the tin before placing on the lid. The containers should be placed either on the trunk of the tree or on a branch close to the

trunk; they require examination from time to time and refilling when empty or when the syrup solidifies. Cans not water tight can be so rendered by dipping in molten paraffin.

The great success in ant eradication reported from the use of these methods in the Southeast likewise attended similar intelligent efforts in California during 1917. Heavy colonies of this pest throughout large orchards have frequently been reduced to insignificant numbers within one to three months, although a much longer time is required before eradication is accomplished. Effectiveness depends in large degree on the time of application as well as the freedom of the tree from scale, mealybug, etc. The ant when attracted by the honey-dew furnished by these insects does not feed freely on the poisoned syrup, so that this means of control has not always proved fully effective during periods of severe mealybug infestation, but fortunately this situation can be avoided by distribution of the syrup in the spring when the insect is present in small numbers. In fact, it appears that this ant poison is more effective in the spring and late autumn than in the summer. In view of this condition ant control should be started at the present time.

#### The Citrophilus Mealybug

An investigation of the common mealybug during 1914 to 1917, in which fumigation, spraying, and beneficial insects were thoroughly tried, demonstrated that orchard control of this species of mealybug is most economically and effectively accomplished through the proper utilization of beneficial insects; that there are already established in this state a large number of such mealybug enemies, of which four predatory species, (namely Sympherobius 2 spp., Cryptolaemus and Hyperaspis) are in themselves capable of effectively controlling the common mealybug; furthermore that the primary requirement in natural control of this pest is the timely liberation of large quantities of these predators, if not already present in adequate numbers.

It was noted during our mealybug studies that most of the severe infestations in Los Angeles County are in districts overrun with the Argentine ant, and close observation developed that these ants so persistently interfere with the activities of the common predatory insects that their control value is greatly reduced. This is well shown by the fact that every experiment conducted in mealybug-infested orchards covering a period of one and a half years resulted in commercial control of the mealybug rapidly taking place on the ant-free trees, even in those cases where no insecticide treatment at all was applied; on the other hand, severe infestations on the ant-infested trees continued through the active season, and light infestations increased in severity.

In response to a petition from the fruit exchanges and associations of the Upland-Ontario-Cucamonga district, the writer in the summer of 1917 took up the control of the citrophilus mealybug, and A. D. Borden was stationed at Upland to handle this problem. The three severe infestations of this pest, namely at Upland, Riverside and Pasadena, are in Argentine ant infested territory. Therefore, in view of our experience in handling the common mealybug, first efforts were directed toward the control of this ant. The success attending these efforts on a demonstration grove was so convincing to orchardists that poison syrup was distributed through approximately 200 acres of the ant infested district. It is hoped that the greater part of the affected district will be under control before the end of the present season.

The citrophilus mealybug does not appear to be attacked as freely by natural enemies as is the common mealybug; at any rate these beneficial insects are not present in equal variety and numbers. However, laboratory experiments during 1917 showed that the four important predators of the common mealybug previously mentioned will feed upon the Upland variety. A large number of these insects have been in storage during the winter at the Alhambra laboratory and will be distributed in the demonstration orchard at Upland this spring. It is hoped that the

method of control, so effective against the common mealybug, will prove equally successful for the citrophilus species. One demonstration grove already shows slight, though by no means conclusive, evidence in this direction.

#### SPRAYING CHART

The agricultural experiment station of the University of California at Berkeley is issuing Circular 195, "Revised Compatibility Chart of Insecticides and Fungicides" by Professor Gray. The chart itself, which appears in four page circular, is extremely valuable to any one engaged in spraying, especially where it is used for insecticides and fungicides. It shows wherein combinations may be made and labor of one spraying saved. It also shows wherein a combination may not be made because of antagonism of chemicals in one mixture for those of another. For instance, lead arsenate may not be combined with soap-oil emulsion, but the same arsenate combined with any tobacco preparation or mixture of sulphur has full power.

#### HEMP GROWING

The possibilities of hemp growing in the Imperial Valley are arousing much interest. Here is some definite information in a letter from the agricultural agent of Imperial County to University Extension Director Taylor of Arizona:

"I have on hand your letter asking about the hemp in Imperial Valley. The Timken Ranch Company grew a quantity this season. There are about 160 acres planted in the valley with good success. A fair crop is five tons to the acre of the dry straw for which the grower received \$17.50 per ton. It takes 100 days to produce the crop at a cost of \$25 to the acre. This leaves a profit of about \$62.50 in 100 days. The ground is left in fine condition and it is possible to get off a good crop of corn after the hemp has been removed. A greatly increased acreage is expected the coming season."

It is now officially reported that Holland's 1917 sugar crop will be sufficient not only for domestic consumption but will leave a surplus for export. Reports of scarcity were due to the fact that sugar beets were being fed to cattle owing to lack of other fodder; but it is now authoritatively announced that a considerable part of the 1917 crop may be fed to cattle, still leaving an abundance for the production of sufficient sugar. This is in spite of the fact that sugar-beet area in Holland was 20 per cent less in 1917 than in average recent preceding years, the excellent crop offsetting that shortage.

## TEAGUE QUALITY CITRUS TREES

AWARDED THE GOLD MEDAL AT FOUR INTERNATIONAL EXPOSITIONS.

For Productive values, fine quality of fruit and vigorous growth Teague's bud-selected, (pedigreed) properly trained and carefully handled orange and lemon, pomelo and lime trees are the trees to plant. An experience covering a third of a century warrants the assertion that Teague Quality Citrus Trees possess these qualifications in a superlative degree. All the standard commercial sorts, and garden and ornamental varieties; the largest assortment of citrus trees in America. . . . We invite correspondence from intending planters. . . . Consultations on citrus planting by appointment. 1918 Price list just out; send for a copy.

## The "California Special" Plants Every Variety of Beans Including Horse Beans

Make sure of a good stand of beans on your valuable bean land, by using the thoroughly dependable "California Special" Bean Planter.

Each planter is equipped with a set of rotary droppers adjustable to plant any variety of beans from small white to large limas. This is the best and most dependable dropping device known for planting beans. The dropper rotates without friction through the hopper cupping the seed as delicately as though each were selected by hand. The seed passes from dropper to boot which runs at any depth set. Shoe runners will be

This planter will save the price of itself in not injuring the seed bean during the process of planting.

Ventura Manufacturing & Implement Co.  
Ventura, Cal.

furnished where desired. Each boot is hinged with wooden peg. Open wheels run back of boot. These press inward and downward around the seed but do not pack the ground directly on top. The California Special is the last word in bean planting machinery. The frame is especially strong—is made low for orchard work if desired and is so evenly balanced and adjusted as to make it easy to handle. Made in 2, 4, 6 and 8 row sizes.

Rotary dropping device insures uniform planting. It cannot injure any of the seed.

Catalogue and circulars sent on request. We make a complete line of bean and beet tools.

**Saturday, March 30, 1918****OUR ADVERTISERS RELIABLE**

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscribers must have mentioned the Cultivator when writing the advertiser.

**THIS WEEK'S COVER**

It is probably true that the response to the appeal for more food has not been so quick by dairymen as by many food producers, or, rather, if it has been as swift, it has been slower in apparent results. It takes time to make a dairy; more, the feed situation has been so complicated that increase of dairy output has been almost an impossibility. But the dairymen are turning every direction for relief, and the silo offers that relief most satisfactorily. The cover illustration presents a typical dairy scene, alfalfa in the foreground, corn for silage on the left, the dairy cows and the silo in the background. This is the time of the year to plan and to build the silo and soon will be time to plant the corn or other silage crop. This cover illustration should give inspiration to many dairymen.

**FEED YOURSELF**

It is not asking much; still it will be a wonderful help to the nation if each of us will produce enough for our own food.

**KEEP YOUR BONDS**

Some merchants are unwisely advertising to accept liberty bonds in return for merchandise. This is now being discouraged by the treasury department; it should be discouraged by true patriotism the country over.

**LAND SETTLEMENT**

Still the requests come for information as to the land settlement proposition. We ask all subscribers who are interested in this to write direct to Dr. Elwood Mead, University of California, at Berkeley for information regarding this land settlement.

**GIVE US STEEL**

A California implement manufacturer finds himself unable to guarantee delivery of a supply of implements which would mean thousands of tons additional sugar this year, if delivery could be made, but with the immense demand for steel for submarine chasers, and carriers of military equipment and commerce, producers "way out on the Pacific Coast," stand poor show of getting the steel for implements, but the country must have sugar and we must have more implements.

**EASTER**

The world is approaching Easter day of 1918 in the presence of its most awful disaster. The slaughter of thousands — of hundreds of thousands — and the destruction of those things which the earth values highest and even the endangering of our very liberties.

We cannot write of this which should be glad Easter time, but God grant that another 12 months may bring Christian peoples together and especially give strength to the arm of America that we may then say in truth "Christ is Risen."

**FILED YOUR RETURN?**

For six months the Cultivator has urged attention to the provisions of the income tax and to the necessity for filing a return by every unmarried person whose income in \$1000 or more and by every married person whose income is \$2000 or more. This should have been done prior to March 1, but extension of time was made until April 1. The return must be in the hands of the district collector before the close of the office on the evening of Monday, April 1; postmark of April 1 will not answer.

Meantime keep books for next year.

**FUEL**

It is probable that Cultivator readers are but little concerned with the efforts of the fuel administration to secure a saving of next year's coal. In Eastern centers, however, every effort is being made to induce the placing of coal orders for next winter's consumption before the first of July. While Californians burn but little coal, it is a goodtime to store up that which will be needed, and, better, to consider fuel production for ourselves. There are few farms in California which do not offer some opportunity for at least a small woodlot, and with the quick fuel producing quality of eucalyptus we are offered an opportunity to add to our comfort and to the economies which we may practice for our nation.

**PRIZE WINNERS**

Note those three \$100 checks on third page of this issue. We presume each one of them cost the winner far more than \$100 worth of effort, but they are not the only reward. Also note the photographs of two of the winners, J. W. Coppini of Ferndale and Iver Iversen of Arcata. We regret very much that we did not have a photograph of W. Terkelsen of Ferndale, but we hope later to have from Mr. Terkelsen himself, as well as from the other two prize winners, the story of how these three men got together dairies and then fed so as to produce from 400 to 600 pounds of butter per year from each cow. The state dairy cow competition has taught some great lessons to dairy-

men. The Cultivator hopes to be able to pass on some of them in a way which will increase our profits and our patriotism.

**PUT OUT THE FIRE**

Forest fires which burned over almost a million acres of national forests in 1917 caused a loss of a million and a quarter, which is but a trifle these days of billions, but, leaving dollars out of consideration and taking the food viewpoint, there is call for greater care the coming year than ever before. Put out the fires and put out anything or anyone which or who by carelessness or otherwise encourages loss by fire.

**SELLING BY WEIGHT**

The markets of the East have finally come to see the value of and to adopt one of California's marketing plans. All over the East potatoes by the bushel, half bushel and peck has been the rule. We believe the department of agriculture still reports production and exports in bushels, and in other ways maintains the bushel unit, but in the markets "per cental" is now quoted. It would be well if the department would make its reports on the same basis.

**PLANT YOUR GARDEN**

With all the moments filled, we are liable to forget this is the planting time for our gardens. Last year proved a good lesson for many of us in that many a help to a quick meal was secured from our own garden. Californians have been prone to let the Chinaman and Jap gardener have the benefit of our trade, and these war times have brought us to a realization of the garden possibilities.

California home gardeners last year raised more than \$5,000,000 worth of food stuffs. Notwithstanding our failures, we do accomplish much in the aggregate. Let it be doubled this year.

**BUY A BOND**

Next Saturday, April 6, is the first anniversary of America's entrance into the world war. It is to be celebrated by the inauguration of the third liberty loan drive. The amount announced is \$3,000,000,000. And the American people are standing ready to support the government to the limit, and the limit with Americans will not be reached until many more billions have been asked for. The banks have been conducting a campaign for some time of subscribing for treasury certificates which will bring the money into the vaults and make it immediately available once the campaign is started. The bonds will be of the same denominations as the last offering, and it is desired that a bond shall be placed in every home in America. If, however, 50 per cent of Americans should buy each one \$100 bond, it will raise the money needed.

**LEGAL ADVICE**

One of the most popular departments of the Cultivator is the legal in which matters of interest to agriculturists from the legal standpoint are discussed, but the scope of this department is often misunderstood by our subscribers, for nearly every week some one calls at the office expecting to find a free consultation department. Mr. Stanton, who answers the questions for the Cultivator, is a regular practicing attorney in Los Angeles and is rendering valuable service, and the Cultivator would be glad to employ him for consultation with subscribers, but this is impossible. But we are glad to employ him to answer these questions of general interest through the columns of the paper. Anyone desiring personal or immediate service should take the matter up with Mr. Stanton.

**This Week's War News**

The third liberty loan drive begins Saturday, April 6; \$3,000,000,000.

An American banker on his way from Russia to Sweden was captured and is now held prisoner by the Germans.

Submarine effectiveness is still decreasing, and as soon as shipping can be increased it is anticipated that American troops will be sent forward more rapidly.

A fleet of German war vessels which was bombarding the French coast was attacked by British and French fleets and three of the German vessels were sunk.

The Wisconsin primaries gave Americans a decided shock. The disloyalists were defeated but showed such wonderful strength that the whole nation is asking that Wisconsin redeem herself.

The situation in Palestine remains much the same other than that General Allenby has made advances toward the East and now has a considerable number of troops on the east side of the Jordan.

Anarchy in Russia continues, with German troops overrunning much of the country. Even Moscow is threatened and there are no officered troops to prevent the Germans entering if they desire. No definite action is yet taken by China or Japan.

The Italian front has shown no activity other than by airplane explorers, although it is known that German reinforcements have been sent to the line. The food situation in Italy is becoming more acute every day and America is appealed to to deliver food so far as possible.

America and the Allies have taken possession of all merchant vessels of Holland which were in their harbors, and within a few days of seizure they were on the ocean carrying supplies to our armies. The seizure was made after this country had made every effort to arrange for purchase on terms satisfactory to Holland. International law and precedent in former wars justifies America's action.

One surprise of the war is the long range "bombardment" of Paris. Ten inch shells have been dropped within the city limits, some have estimated from a distance of 74 miles. Such long range gunfire is supposed to be impossible; however, and it is generally thought that the activities of German airplanes or of some concealed gun behind the French lines accounts for this bombardment.

Spy activities continue in all portions of the country, and so far as announced the only punishment meted out has been internment. However, in Oklahoma and some other sections more direct action has been taken. In one case a German sympathizer, reading account of the death of American soldiers in France, remarked: "Served them right; I wished every damned one of them were killed." The sheriff of the county, standing near, pulled his gun, and that wish will never be repeated by the same German. The entire country is appealing for more vigorous action in this matter of harboring traitors.

The blow has been struck on the west front in the apparent effort to split the line at the junction of English and French troops. The Allies have been forced to yield under masses of Teutonic troops known to number 600,000. Losses exceed any preceding battle. The line of the Allies has given away until a dozen, or possibly a score of miles, have been yielded to the enemy. As we go to press the line is being held and the Allies express confidence of being in a stronger position than at the beginning of the battle. Amongst the French towns captured by the Germans are Combes, Peronne, Ham, Chauny, and Noyon. The number of men lost on both sides is estimated to be between 300,000 and 400,000. The American troops have not been The portion of the line occupied by the American troops has not borne the brunt of the attack, but other reserve troops have been thrown in to support British and French forces. Several companies of railway engineers have also been engaged on the battle line, and reports are, "The Americans have fought like tigers and have acquitted themselves with their flag." Military experts anticipate the early beginning of the Allies back drive.

# Agricultural News Notes of the Pacific Coast

## Northern California

Sheep shearing is on in Sutter County.

J. E. Stiles has been appointed farm adviser of Sutter County.

The upper Sacramento Valley is shipping out largely of its stored barley.

Live stock men of Humboldt County report this the finest season for pasture.

A portable alfalfa meal mill is ready for operation in the alfalfa section of Yolo County.

Contractors are endeavoring to secure Sonoma County 1918 prunes at 7½ cent base.

Articles of incorporation of the Western Rice Company have been filed at Colusa.

Humboldt County milkers have struck for \$85 and board; some even demanding \$90.

Various Sacramento Valley counties are definitely committed to bulk handling of grain.

The first work of the Butte County farm bureau is a campaign for greater pork production.

Yuba County now has fully organized farm bureau. Geo. Carr of Hamonton is president.

Stock owners of Humboldt County are lending hearty encouragement to boys agricultural clubs.

Woodland, Yolo County, is made a center for first inspection and purchase of horses for the army.

Vegetable shippers from California are not pleased at prices, which are much lower than those of a few weeks ago.

The California Honey Producers' Cooperative Exchange is now organized and has headquarters at San Francisco.

Farm center meetings in Glenn County: Ord, April 2; Bayliss, 5; Codora, 9; Larkin, 12; Orland, 16; Jacinto, 19.

Cling peach growers of Sutter County are discussing cooperative organization which will handle canning stock for members.

A ruling has been made which allows farmers nine cents per bushel additional on wheat where it is found necessary to sack it.

Some of Sutter County's richer tule lands which have been assessed heretofore at \$8.00 to \$12 per acre will be raised this year to \$30.

Many of the gold dredgers of Butte County will be closed down because of high priced labor. The dredges produced during 1917 something over \$2,000,000 worth of gold.

Sutter County anticipates it will need an army of 10,000 men to harvest its fruit crops. The Sutter County Growers' Association has been organized to look after the interests of the fruit men.

The Anderson-Cottonwood irrigation district of Shasta County has completed an immense syphon at Churn Creek, which in turn passes the water over the Sacramento River in flume swung under the bridge.

Prof. Bioletti has recommended to farm centers of Sonoma County the planting of the Corinth grape. The fruit of this vine is generally known in the trade as Zante currant. The country now imports 45,000,000 pounds of this fruit.

## Central California

Tulare County is picking Valencias.

The farm bureau of Kerman, Fresno County, will meet on April 9.

Stanislaus County Grange is building a bean cleaning plant at Ceres.

A beekeepers' conference is to be held in Bakersfield, Monday, April 1.

The National Farm Loan Association at Madera recently met for annual election.

Hollister contemplates the establishment of an immense canning and packing plant.

The state association of county horticultural commissioners recently met at Fresno.

Recent rains gave impetus to the planting of deciduous trees in all sections of the valley.

Deciduous fruit growers of Madera County are contemplating joining the California Fruit Exchange.

Peach growers are to build a cannery at Turlock. It will be under the management of the California Peach Growers, Inc.

It is now definitely settled that farmers are to be allowed nine cents per bushel for sacked grain, in excess of the base price established.

The Grange Company at Modesto will handle grain in bags as it is maintained the government will allow nine cents per bushel on grains which are sacked.

The California Associated Raisin Company will commence at once the first unit of nine great buildings to be constructed on a 20 acre tract near Fresno.

The Tulare County Duroc-Jersey Breeders' Association recently met in annual meeting and elected Allen Thompson, president and R. C. Sturgeon, secretary.

Beekeepers of Monterey and Santa Cruz Counties are organized for cooperative marketing. M. G. Lee of Pacific Grove is president; H. J. Henneken, Seaside, is secretary.

Farmers generally are pleased with the ruling which prevents unrestricted manufacture of bran and other by-products of wheat into proprietary foods, because this will save much live stock feed.

Stanislaus County farmers are suggesting that the Farmers Non-Partisan League be made a national organization of farmers which will act to secure justice, both politically and economically, for the farming interests.

Fresno fruit growers are planning a series of model camps for labor to be used in harvesting the coming season's fruits and crops. More than 1800 acres of long staple cotton will be planted in the Corcoran, Kings County, district.

The Prune and Apricot Growers' Association has from Hoover suggestion that the new season's pack of apricots and prunes should not have prices named until after conference with him and until he has copies of form for contract to be offered to growers.

Stanislaus County has a free employment bureau in every town. Men seeking employment register, and all registrations are forwarded to the Modesto office. Under this system 1369 men were placed in positions last year, and it is anticipated this number and the efficiency of the organization will be greater this year.

## Southern California

Imperial Valley will plant about 5000 acres of Pima cotton.

Public schools in Orange have been closed because of measles.

The Oxnard Courier reports the sugar beet outlook as hopeful.

A. R. Sprague has been appointed farm adviser for Orange County.

The Riverside citrus experiment station was dedicated this week.

Serious damage was done to Ventura County roads by the recent storms.

Santa Barbara millionaires are reducing the cost of living by serving shark steak.

Palo Verde Valley bee keepers held a meeting at Blythe, Riverside County, last week.

Orange County Exchange members have already received around five cents per pound for Navels.

The Golden West Citrus Association of Tustin is now shipping lemons from its new packing house.

The city of Pomona receives about \$1200 annually from the sale of walnuts grown on its sewer farm.

Imperial is becoming more and more a shipper of asparagus. Car shipments have already begun.

Ventura and San Luis Obispo Counties are making a shipment of 5,500,000 pounds of beans to France.

The work on the building of the great aviation school on the mesa near Riverside is being pushed.

Rhodes grass grown in Niland, Imperial County, is declared to be a complete success for that section.

The Hemet and San Jacinto Growers' Association has sold \$325,000 worth of canned fruit during the past season.

The first auction of fat hogs under the Imperial County farm bureau direction will be held at Brawley April 18.

San Fernando, Los Angeles County, high school expects to manage a tractor school which will be held the entire first week of April.

The Limoneira Orchard of Santa Paula, Ventura County, will plant extensively to beans as an intercrop in its lemon orchards.

A branch of the California Honey Producers' Cooperative Exchange has been located in Orange County. There are about 50 apiarists in the county.

The chamber of commerce of Redlands, San Bernardino County, is encouraging a movement for a by-products factory which will save citrus wastes.

County Horticultural Commissioner Morris of Orange County contemplates installing small fumigation outfit to handle small tracts within incorporated cities.

The final judging of the pigs in the Imperial County pig contest and awards will be made at Brawley, April 20. Following the judging a public auction will be held.

Bills have been introduced into congress authorizing the secretary of the interior to contract with the Imperial irrigation district to deliver water from the Colorado River.

The Hemet Canning Company is rebuilding and adding a two story concrete building to its already large plant. So far as can be determined this early there will be a big crop of apricots.

## The Coast and General

Louisiana is shipping strawberries into northern markets in carlots.

Idaho expects to erect several grain elevators before next season's harvest.

Sokulk, Whitman County, Washington, is building a 50,000 bushel elevator.

Canada has exempted tractors and pure bred cattle from duties until February, 1919.

The federal government is appealing to all producers and holders of wheat to "loosen up."

The Okanogan County, Washington, Live Stock Association meets in annual session, April 4, 5.

Seattle reports apple markets especially strong. The bulk of the fruit is still in the hands of the producers.

Farmers in Yakima, Washington, have been investigating labor conditions and anticipate plenty of help for spring work.

The crop of olives in Greece in 1917 is reported as extremely small. Price of oil has been increased from \$1.09 to \$1.32 per gallon.

Northwestern potato growers report sales decidedly slow. Growers are holding for one dollar with buyers unwilling to pay.

Farmers of Oregon and Washington have purchased large numbers of tractors, and spring plowing has begun in some sections.

The division of animal industry, Hawaiian Islands, recently made a test of 450 animals for tuberculosis and all but 53 passed test. Owners are compensated for condemned animals.

Nearly all counties of Arizona have completed the formation of farm bureaus and all are committed to putting through the big food program of 1918.

Department of agriculture reports California as having 468,000 horses, worth an average around \$98. The average for 1917 was \$97; 1916, \$96; 1915, \$100; 1914, \$100.

A series of grain elevators is to be erected in Columbia County, Washington. Each will have a capacity of about 75,000 bushels and will cost about \$15,000.

The federal government's seeds stock committee operating in Washington is working to secure large supply of Marquis and Kubanta durum spring wheat for planting in the Northwest.

A starch factory has been established and is in operation at Beaverton, Oregon. It will convert tons of cull potatoes into more valuable food products including starch, potato flour and potato farina.

The area of sowing of winter wheat was the greatest last fall in the country's history, but it is feared that the actual production may be materially reduced by severe winter conditions. An attempt is being made to remedy this by securing as great a planting of spring wheat as possible.

English tractors used in farming operations have increased their efficiency so that now they are averaging nine acres per week whereas the average was formerly 7.2 per week. Presumably these tractors are working on extremely small fields. There are 1450 government owned tractors used in farming in England.

## A Valuable Tree

Written for California Cultivator by Ernest Braunton

HE dual purpose plant, whether tree, bush, or vine, has always held a peculiar fascination for me. Why plant for a single purpose when we may plant for two and get the fullest value in each line. The avocado will serve as an illustration. The tree is fully as beautiful as a magnolia or ficus (rubber tree) and as fruitful as an orange or an apricot.

But I wish to sing the praises of another and lesser known, one that has not yet been "boomed," but which will one no distant day be universally grown throughout a large portion of California. It is the carob or St. John's bread, *Ceratonia siliqua*. I was in a seed store in Los Angeles a few days ago when a prominent horticulturist entered and said: "I want a dozen budded carob trees; if you cannot get them for me now, bud some or get someone to bud them for you." That is but a small example of orders that will be numerous in years to come.

The best seedling trees now grown in California are not good enough, though we have some that are well worth budding from until we shall have secured better ones. Locally grown pods are not lacking in food

value, analyzing in sugar content to compare favorably with any found elsewhere. We should secure from abroad trees, or buds from trees, that produce heavier crops of larger pods. No tree that I have seen grows a crop that will favorably compare with those of other lands. The best pods from the best local croppers bear pods five or six inches long, but trees are cultivated in some countries that bear an equal or greater number of pods twice as long and others bear many times the number of pods equally as large as the largest we grow.

From a sexual point of view these trees are somewhat puzzling, for they may be either monoecious, dioecious or hermaphrodite. The first term means both sexes of blossoms are on one tree; the second that female blossoms only occur on one tree and male blossoms only occur on others; while hermaphrodite or perfect flowers contain organs of both sexes. C. W. Beers, of Santa Barbara, who has given the subject much study, states there are quite a number of trees in California bearing perfect blossoms, but it is thought by far the greater number bear male and female blossoms on the same tree. I believe the best crops will eventually be borne by

trees that are female only, for in nearly all trees there are greatest and best results from cross-pollination. This is true even in apple and other fruit trees where all blossoms are perfect. In many kinds of trees some are self-sterile, even where all blossoms are perfect, and no fruit will be borne except flowers be pollinated from other trees. Chestnuts are common examples of this class.

Trees have been known that in favorable years, when of large size, bore a crop of one ton of pods of high value as stock food, but such crops are unusual. If we could have mature trees in California producing one-fourth that amount, they would prove a paying investment. As an ornamental the tree is valuable for all purposes for which trees are planted. For all-the-year shade and street planting it has few superiors. Carobs will pass through winters of light frosts only without being in any wise injured, and large trees will successfully pass through severe frosts with no material damage. They are wonderfully drought-resistant, require little care of any kind and are not seriously troubled by insect pests or diseases. I predict that in a few years they will be freely planted for the crops of pods, which rank very high as a stock food. In the meantime let us plant them as mere ornaments, but choose the best croppers when so doing, as they cost no more, need no more care and require no greater

space than those of little economic value.

### Plant Red Sunflowers

Much enjoyment may be experienced in watching the unfolding petals of the so-called red sunflowers, for hardly any two of them are of the same shade or color. The flowers do not differ from the more common variety except in color and size. They are not so large, averaging, in well grown plants, about six inches in diameter. But in color they are curiosities. Some are solidly yellow, others as purely red, or even maroon. Many are red with yellow tips on the petals, and other combinations of these two colors are various and frequent. They prove very interesting to both young and old and require no greater care than the large sort so common yet so gloriously sunny and open-faced, so cheering to look upon; for they actually appear to me as possessing pleasant dispositions.

### Range of Taste

It is peculiar what likes and dislikes we have in flowers. Nearly everyone has favorites and also those they do not love. In the latter class I place the zinnias. I cannot say I dislike them but they hold no attraction for me. Certainly no coarser flower ever grew, for a wild sunflower is dainty and graceful in comparison. They are stiff and bold, ungraceful and unyielding, as though upon stems of steel, and when the blossoms mature they are of the texture or consistency of cork or much like a stained and decaying pine cone. Some few are of very good color, but even this virtue insufficiently cloaks their extreme coarseness and woody texture. You may have them if you wish, but they are none of mine. I never grew one nor do I intend doing so, for in the same soil, under like conditions and with less care, I could grow glorious petunias.

### Divide Perennials

Our gardening season is late this year in all parts of the state. The perennials should all have started to grow before this. But I notice that in cool or shaded portions of the garden no growth has been made by herbaceous perennials. These may be divided now without danger to the coming crop of flowers. Shasta daisies have for years been in bloom in my garden in March, lasting in full bloom throughout July. This spring the growth is just starting. Such plants, torn apart, may be very heavily multiplied and thereby be made to flower more heavily and with larger flowers, for they respond quickly. Sweet Williams, phlox, and a long list could be named that should undergo like treatment. The soil should be enriched and also pulverized finely before replanting.

### Garden at Once

If you wish to garden at all this spring it should be done at once. The extremely dry winter rendered all plant life unusually dormant. The late warm rains, followed by warm weather, has not only started all planted growth at once but it has started with such vim and vigor that it cannot be stayed or interfered with. We must therefore count one week as two ordinary weeks of a normal year and not be caught napping. For present development will bring surprises even to natives and the older settlers. Be ye therefore prepared.

### WHAT'S THE USE?

The new hand had initiative, judgment and experience. He knew how to do things and took hold with zeal and intense interest, working steadily and conscientiously at his job until it was finished. But he did not consider himself superior to his boss and gave advice when asked, not before. When told to dig out the best fruit tree, he went and did it without a question as to the propriety of it. Then he cleaned off the tools neatly and hung them where they belonged in a dry place. After using the hose, he coiled it up and hung it away. His pay was raised and we decided to keep him. The next day a neighbor sniped him and installed him in a better house. There is no moral to this, it's immoral.—F. L. K.

A war saver is a life saver! Buy war savings stamps!

*"The Car of No Regrets"*

# KING "8"

The KNOWN car will have a "waiting list" this year

UTILITY is now the national buying reason. The public wants only cars of proved reliability built by established companies. With output reduced because of war manufacture there will be a shortage of preferred cars. If you expect to buy a KING this year, ORDER EARLY.

Following a successful but smaller "Eight" and a popular "Four", this sixty horse power King is beginning its third year of world-wide operation, with practically no mechanical change except a general refinement which continues at all times. The chassis has proved its power, stamina and economy in every climate the world over and its recent use for armored cars and war ambulances is final evidence of its reliability under all conditions.

The King "Foursome"—a body type originated by this Company, and now widely followed—was declared by many to be the handsomest at the New York Automobile Show. You are urged to examine and drive this remarkable car.

~ ~ ~

A 7-passenger Touring Car and a 7-passenger Sedan are two other popular King models.

KING MOTOR CAR COMPANY, DETROIT

Many railroad crossing gates are not operated after 7 P.M. This photograph shows how the 500-foot range of the Conaphore protects your safety. It also shows how the Conaphore keeps the beam within legal limits, and so makes for the safety of others

**THE CONAPHORE**  
Smooth front surface. Easily cleaned. Does not clog with dust or mud

Photograph by L. A. Hiller

# Country roads demand long range

## Safety demands no glare

**N**OTICE how brightly the Conaphore beam lights up the railroad crossing and the engine in the photograph above. Then see how far beyond the crossing it illuminates the road.

The Conaphore does not diffuse and scatter the light in all directions. Neither does it dump the light directly in front of your car. Instead it shoots a long, broad beam ahead for 500 feet and more.

Notice, also, that where the Conaphore beam strikes the engine, the light is not more than 42 inches above the road. If a motorist were approaching from the other direction, the Conaphore rays could not dazzle or confuse him even to the slightest extent.

**Conaphore design patented**

Conaphores give you the range you need and to which your own safety entitles you. Yet they eliminate all glare and so make for the safety of others.

The Conaphore permits the bulb to

be focused for maximum range. Its efficiency is due to scientific design.

A series of patented corrugations on the inner surface of the Conaphore bends down the beam, while cylinders in the center fan ample light sidewise.

These corrugations also limit the height of the beam to 42 inches. There is no chance of blinding the other fellow, and you are within the requirements of any state or local headlight law.

**Pierces fog and dust**

The Conaphore is made of Noviol Glass patented—invented by Conaphore designers and used in no other headlight device. This unique yellow-tint glass causes the light to pierce fog and dust, without “back-glare.”

Blue and violet rays present in all white light are the chief cause of “back-glare,” because they are easily diffused by the fog or dust particles. Noviol Glass absorbs these blue and violet rays,

but projects all the rest of the light. Thus the Conaphore eliminates “back-glare” and gives you perfect road vision even when the night is thick. *The Noviol beam makes the easiest light for your eye to follow.*

Conaphores are also made in clear glass, but we strongly recommend the Noviol.

**Help fight the glare evil**

On dark country roads the glaring headlight danger is found at its worst. Put Conaphores on your car at once, and do your share to stamp out the glare evil. They give you the long range you want, yet take all glare out of your headlights.

Easy to install. Sizes made to fit all cars. If your dealer has not yet received his supply, write us and we will see that you are promptly supplied.

**GOING UP!**

**-the Price of Hay!**

**the answer!!**

**Plant**

**GERMAIN'S SELECTED ALFALFA SEED**

**Now!**

The only solution of "the high cost of hay" problem is the immediate planting of alfalfa. The whole State of California is facing a hay famine. Stock everywhere are literally starving. And hay prices are going up-up-up! Never before has the planting of alfalfa offered such golden rewards. Think of selling your alfalfa baled in carload lots at \$40 a ton and perhaps higher, next season! With an insufficient supply of oat and barley hay in sight, alfalfa is bound to command fabulous prices.

Help your State and increase your bank account by planting alfalfa. The best seed means the best crop. Germain's Selected Alfalfa Seed is the best that money can buy—and Germain's Hairy Peruvian Alfalfa Seed will give you an additional 2½ tons of hay to the acre.

Write for free seed catalog.

## Now if Ever is the Time to Cut Out Waste on Your Farm

By C. A. Crate

Ever since you have kept cows you have needed a silo.

But your need today is ten times more pressing than it has ever been before because it is no longer merely a personal need.

It has become a national need.

The world needs food and it counts upon the farmers of America to supply it.

Every additional ounce of food you can make your land produce means not only more profit for yourself but help for your country.

With the cost of every commodity increasing, with an actual scarcity of foodstuffs in prospect, it has become vitally necessary to conserve everything of value.

There is nothing of greater value today than the fertility of the soil, and a silo will enable you to eliminate the tremendous waste of soil fertility.

You cannot afford, either for the sake of your pocket or for the sake of your country, to use inefficient methods of farming.

A good silo will:

Reduce the cost of production on both beef and butter fat from 15 to 20 per cent.

Increase the stock carrying capacity of the land 40 to 50 per cent.

Provide the equal of rich green grass for all the year around.

Prove the best insurance against drouth and feed shortage.

There are many other reasons why a good silo is the most profitable equipment you can add to your farm, but the big reason for putting up a silo and doing it now is that it will

mean more milk and bigger crops at less expense.

### The Silage Crop

Corn makes the best silage, but there are many other crops that can be used for the filling of the silo, such as, oats, vetch, artichokes, peas or the first cutting of alfalfa.

That first cutting of alfalfa, because of the difficulty in curing it and because it has so many weeds and fox-tails in it, does not make good hay, but it does make good silage and every pound of it can be saved by putting it into the silo.

Corn can be grown in almost all sections of California, and where it is possible to grow it, that is the crop recommended for planting to fill your silo.

In the Coast sections and where irrigation is not possible it is recommended to plant the silage crop early so as to take advantage of the moisture in the soil.

Where it is possible to irrigate the silage crop can be planted later in the season, with corn as late as the middle of July, which will permit another and earlier crop to be grown and taken off before planting to corn, thus making the land do double duty.

As stated corn makes the best silage, and wherever it is possible to grow corn it should be planted for the silage crop. It is recommended that you plan right now your silage crop, as if it is delayed you are quite likely to find you will have no crop to put into a silo no matter how bad you may want one.

## Field Notes from the Live Stock Men

Tulare Holstein Farm, owned by W. J. Higdon, Tulare, is the scene of regular official testing in the registered Holstein herd these days, and Herdsman Harry L. Redd is bringing out good records with the splendid cows and heifers in his care. The junior two year old heifer, Madrigal Mooike 2nd, now holds two state records for milk in class, having made 573.6 pounds milk in seven days and 2347.2 pounds in 30 days. She is still in test and milked 84.4 pounds milk the day before this is written, which yielded 2.43 pounds fat. This performance ranks her as one of the heaviest milking junior two year olds the breed has yet produced. Thelma Hartog De Kol, who already had over 31 pounds butter to her credit in the first seven days of her test, has just milked 108.2 pounds in one day. Coloma Beauty Butter Maid, who made 19.45 pounds butter in seven days as a senior yearling, freshened at just a few days over three years and has made 24.69 pounds butter from 498.3 pounds milk in seven days and is still on test.

Bridgford Company, Knightsen, reports another 30 pound cow in their herd of registered Holsteins. This is Raphella De Kol Pontiac who has 33.82 pounds butter from 670.7 pounds milk in seven days. She is by a son of King of the Pontiacs. Mercedes Inka Hengerveld who made over 34.09 pounds butter from 696.8 pounds milk in seven days, has now finished her 30 day record with 140.57 pounds butter from 3043.3 pounds milk. The junior two year old, Bessie Veeman Korndyke, has now finished her 30 day record. In seven days she made 534.3 pounds milk and 25.008 pounds butter, and in 30 days 2148.9 pounds milk and 103.22 pounds butter. Both of her butter records are California records for a junior two year old. Another junior two year old, Rose De Kol Cande, made 24.35 pounds butter and 451.1 pounds milk in seven days. The splendid records made in this herd are bringing to light another good young "cow man," James Fasola, under whose care these records have been made.

H. H. Braly, manager of the Conejo Ranch, left during the past week for Omaha and vicinity to purchase more pedigreed Hampshire and Duroc-Jer-

sey swine stock to add to the herd at this big breeding farm, and also to make arrangements for exhibiting their hogs at the big Omaha Stock Show.

The horse barn at the university farm will be a center of interest on picnic day, April 20. Twenty thousand visitors are expected on that day, and preparations in all departments are being made for them. Salvador Headlight is one of the fine pure bred Shire mares to be seen on exhibition. She is bred to foal two days before picnic day, so that visitors will be able to see her colt. This mare is the daughter of Neuadd Hillside, the recent grand champion stallion at the state fair, and was owned by the late Jack London. The sire of the expected colt is Desford Banker, an imported Shire stallion, owned by Henry Wheatley of Napa.—W. J.

R. K. Walker of the firm of Peters, Lamson & Walker has just returned from a trip of inspection of the leading Duroc-Jersey herds of the Middle West. He says, "In the J. D. Waltmeyer herd which I have watched for a number of years I found the most consistent breeding policy of any herd I know of. Mr. Waltmeyer has followed a very farsighted policy of selection and line breeding, and as a result has the most uniform herd you could imagine. Using Golden Model sows, mostly daughters of Grand Model, he has mated them to the great Iowa grand champion, Great Wonder, and the produce is simply wonderful. I never saw such short strong pasterns and straight legs. While they get immense size without being shallow, they are great big high backed, deep chested sows with a wonderful spring of rib and extreme length. To mate with these sows Waltmeyer has selected the \$2500 boar, Giant Invincible, a boar that is on the road to weigh 1100 this fall, and also the splendid young boar, Oakdale Model, a son of Model Lady 3rd and Grand Model. In Waltmeyer's recent bred sow sale one sow sold for over a thousand dollars and was resold before she left the farm for \$1200. Mr. Walker selected several sows from this herd to bring to California, among them a real show gilt by Great Wonder and out of a Grand Model dam whose full brother recently sold for \$1000.

## DAIRY FARMERS CONFERENCE

Continued from Page 389

It was out of a sense of the importance of the official testing work to our breeders and to the dairy interests of the state that the California state dairy cow competition came into being. The plan of conducting such a competition gradually took form during the winter of 1915, and after conferences with breeders and others interested it was decided to have it commence November 1, 1916, and continue until the end of February this year.

Aside from the general considerations sketched in the preceding, there were various reasons that appealed to those interested in arranging for the conduct of the competition. One was to establish the educational value of production tests, which was naturally uppermost in our minds. Experience has shown that a dairyman on taking up testing work in his herd is led to give his cows better care and feed them better than formerly, and the resulting response in the way of production creates new interest in the herd and kindles enthusiasm. Enthusiasm, like measles and mumps, is catching, and a dairy farmer who engages in this work before long, as a rule, becomes a center for dissemination of advanced dairy knowledge, and his influence may gradually permeate the whole community. The more such centers we succeed in establishing, the more successful the campaign for better cows and better methods of feeding and care of the cows will be. It was expected that there would be a marked educational effect of the competition in this direction, and the results we believe have fully justified this expectation.

Another object in view was to establish, for the benefit of the dairy public, within the state and outside of it, the kind of production California cows are capable of. We have had many remarkable production records in the past by cows bred or developed in the state, but they have belonged to only a couple of breeders; mainly, in fact, to one breeder, whose services for the development of Holstein cattle of exceptional quality we are all glad to recognize. What we had in mind was to stimulate the interest in official testing so as to bring forward many other breeders and, incidentally, to establish the fact that it is not necessary for intending purchasers of high bred dairy stock to import such from the East.

Appreciating the important part that grade and common herds play in our dairy industry, we made it a special point to interest owners of such herds in the dairy cow competition, and to secure a large enrollment of their cows. Opinions may differ as to the degree of success that crowned our labors in this respect, but the participation of grade cows, at least, in the competition exceeded the expectation of those in charge of the competition and has been a source of great satisfaction to us.

There are several distinctive features connected with the competition the formal closing of which will occur tonight, besides the effort to interest owners of grade and common cows. First of all, the numerous prizes awarded for high records. Through the liberality of breeders and others interested in the advancement of California dairying a large sum of money was collected as a prize fund, and many special prizes were also donated. The value of all prizes offered in the competition amounts to over \$7500, of which about \$4000 was set apart for records made by grade cows. The total number of prizes offered is 94; of these the two series of monthly prizes numbering 28 were awarded during the progress of the competition. The balance were set apart for awards of production by individual cows, or for groups of three to ten cows in a herd for periods of ten months. It is with a feeling of gratitude that acknowledgment is here made of the generous assistance of the many contributors to the prize fund and of special prizes. But for this assistance there would have been much less interest in the competition, and doubtless a much smaller participation. The list of contributors of prizes is large and has been published in Circular 153 of the College of Agriculture, as well as in the press. Cash contributions varying from \$5 to \$500 were received from 26 different individuals or firms; in addition, four of our agricultural papers offered large

special cash prizes. Nine breeders offered pure-bred dairy bull calves, two milking-machine firms offered a two-unit outfit of their mechanical milkers, six separator firms gave one of their large size farm cream separators; a carload of dried beet pulp and two silver trophies were furthermore donated, and three of the dairy breed associations gave two valuable trophies each, for the highest production of a registered cow and of ten cows in a grade herd sired by a registered bull of their respective breeds. Finally, out of donations to the prize fund received in excess of the cash prizes offered, the college of agriculture provided two especially engraved gold medals to be awarded, one to the owner of the cow of his own breeding producing most butter fat in ten consecutive months; and the other, to the owner of five cows fulfilling the same requirements. These awards have all been made by this time, and will be announced presently.

Another feature of the competition was the record period decided upon: the prizes in the competition, with exception of the two monthly series referred to, were made on the basis of the production during a period of ten months, and not for a year or for seven-day periods. The experience of most breeders in regard to full-year tests has not been encouraging. In order to reach a maximum production the breeding of the cows is as a rule delayed until late in the lactation in

order that they may produce a maximum amount of milk during the year. The late breeding of the cows, coupled with the intensive method of feeding generally adopted, makes it difficult to get them in calf again, and the regularity of the once-a-year breeding period is thus broken. There are exceptions to this rule close at home, in the case of the well known record cow, Tilly Alcartra, and others, but as a general proposition, tests conducted for a full year have serious drawbacks from the dairy farmer's point of view, who wants his cows to drop a calf every year. In order that it should not be necessary to spoil the cow to get the record and to set a good example, we decided on a ten-months record period for cows in the competition. Since the rules governing the competition were formulated, this period has been adopted by the H-F Association as a special prize division for A-R cows, and other breed associations have also shown their disapproval of keeping cows in milk a full year by placing those carrying a calf during the greater portion of the record year in a special class. Under the rules governing the competition, cows not safely bred within five months from last freshening were barred from competing for all prizes, except those awarded for monthly records and the trophies offered by the various breed associations. Some of the highest record cows, as a result, did not receive the recognition

to which they would otherwise have been entitled. On the other hand, the production of cows which produced good records under a regular system of breeding was duly recognized. What was aimed at in the competition was records obtained under as nearly normal every-day conditions as possible, not phenomenal ones secured at the sacrifice of the future usefulness of the cows; in this direction it is readily seen that the competition has had a very beneficial effect and has pointed the way that the large breed associations will follow more and more closely in the future.

As an encouragement for the small dairyman, or the owner of grade or common cows, the work of the cow testing associations was recognized by the award of three substantial prizes for the largest average production of herds of different sizes. These prizes were offered by the California Cultivator and were eagerly contested for by the owners of about a dozen herds. Records obtained in the associations for 12 consecutive months were considered in the award of these prizes, and only a general supervision over the production of the herds was exercised by the college. In the case of all other cows entered in the competition monthly tests of two days' duration, or of one day for grades, were conducted. The milk yield reported by the owner, checked up in various ways, was multiplied by

## Northern California Live Stock Notes

Written for California Cultivator By W. S. Guilford

**C**ROP conditions are better than at this time last year. A cool spring and a few more rains will insure a big grain crop. The color of all of the grain is good—a rich dark green—and it is making rapid growth now. The upper and lower moisture has met, and practically all of the rain we have had thus far has gone into the ground to be of benefit to the crops.

The value of fall plowing of orchards as a safe moisture conservation proposition has been demonstrated again this year.

Those who planted trees in dry ground, putting them in with water, are rejoicing for the rains have settled the soil and the trees are in the best of condition for growing weather. Every young orchard I know of will be intercropped this year. Alfalfa fields are being disked, and summer fallowing of grain land is in progress. Many rice fields are ready for seeding, and a large part of the acreage will be planted to the varieties that mature earliest.

There is much good roads agitation as a war measure for the more economical movement of crops. The Butte City District Club was organized last week to promote a road from Butte City to Oroville and if possible to unite with the west side highway.

There is a great deal of interest in the big importation of Duroc-Jersey hogs brought out recently by H. P. Slocum & Sons of Willows. One sow in this lot cost \$1000 in the East. There is a constant increase in the number of pure bred hogs in Glenn County of all breeds, but especially Berkshires and Durocs.

A good many are interested in the Hereford sale to be held at Davis and

the Shorthorn sale to be held at Col. W. H. Hord's sale barn in San Francisco April 10 and 11. A choice lot of cattle will be sold.

### I. W. W.'s and Farm Labor

A special farm labor committee of the state council of defense, which met in Sacramento last week, recommends:

Suppress the I. W. W. and all of their ilk. They have been too gently dealt with. The time is here for vigorous action.

Close all country saloons for the period of the war. They will never be reopened. They now decrease the efficiency of many laborers from 25 to 75 per cent.

Import Mexican labor.  
Mobilize high school boys and girls.  
Substitute women for men in indoor work.

Enforce vagrancy laws.  
Enforce laws forbidding trespass on railroad rights of way.

Replace male waiters with women, making the men do more productive work.

State Labor Commissioner John P. McLaughlin will open offices in all of the principal cities in the agricultural districts of the state. The committee consists of the following: Alden Anderson, Sacramento, chairman; John M. Perry, Stockton; P. E. Cogswell, El Monte; F. B. McKevitt, Sacramento; Willey B. Giffen, Fresno; P. J. Dreher, Long Beach; Roger G. Edwards, Saticoy; A. L. Wisker, Grass Valley; Benjamin F. Rush, Suisun; W. S. Guilford, Willows; C. O. Bullis, El Centro; A. R. Bates, Modesto; Albert Lindley, Stockton; A. L. Hebron, Salinas; W. D. Egelbert, Willows; C. C. Chapman, Fullerton.

## Elliott-Brant Rancho Guernseys

The registered Guernseys belonging to the Elliott-Brant Rancho at Owensmouth are making some very fine records, and the value and production of this herd of pure bred cattle is rapidly being built up by means of official yearly tests, which is the only true measure of a cow's ability.

Some 50 yearly tests have been or are being completed, and more cows, and particularly heifers, are being put on test every month as they freshen. These records are particularly interesting as they are made under the same care and treatment as is given all other milking cows of this herd, that is, they are not kept in box stalls and fed expensive feeds, etc., but are kept in corrals with the rest of the herd and are fed the same home grown feeds, alfalfa, corn silage, and ground barley, sometimes supplemented with dried beet pulp and bran.

As the rich Guernsey milk has proved to be very popular and is much in demand at advanced prices, a special feature is made of the milk production of this herd. The milk has proved of the best produced around Los Angeles, not only because of its richness in butter fat, which averages 5.5 per cent and its deep yellow color, but because it is cleanest, as is shown by the bacteria counts, made weekly, which are 25 times lower than

the law requires. Not only has this milk been awarded first place by the Los Angeles Health Board, but has also won the gold and silver medals at the last two California state fairs.

Since the demand for this milk exceeds the capacity of this herd, every drop available is used for the milk trade, consequently the milk from the test cows is used and they are washed and cleaned just as are the other cows before they are milked, which doubtless lessens their production. This fact and that regarding the feeding of home grown feeds, makes the official records, which will be reviewed below, more remarkable than they otherwise are.

Starting the first official tests in the latter part of 1914 with four heifers, the number has been steadily increased, and upwards of 25 will soon be on test. All these cows are milked three times per day, because it has been found that they will produce about 20 per cent to 25 per cent more milk and butter fat per year under the three time milking, and this quantity not only more than makes up for the extra feed and labor necessary, but increases the output, which is important in satisfying the milk trade.

The poorest record made by any cow in this herd was made by a heifer with first calf, who to meet the

Butternut Queen 30478

A great Guernsey owned by Elliott-Brant Rancho. Her official records are: four years, 10,884.5 pounds milk, 532 pounds fat, six years, 12,794.0 pounds milk, 665.7 pounds fat, eight years, 13,235.6 pounds milk, 689.63 pounds fat.

Genese Idaho.

requirements of the Advanced Register for her age, had to make 275 pounds of butter fat. This heifer produced steadily, but not in large quantities, and ended the year with 338.29 pounds butter fat, 63 pounds in excess of her Advanced Register requirements. Other two year old heifers with first calf have produced much larger records.

Lois Valentine's Lad's Lassie, a two year old, with first calf made 10,550.1 pounds milk and 510.55 pounds butter fat. Little Beauty 2nd, with first calf made 10,480.13 pounds milk and 563.2 pounds butter fat, which was the largest record for the age and breed on the Pacific Coast. A remarkable thing about this record is that it was made out of three-quarters of an udder, one-quarter having been lost at calving time. On freshening again, as a four year old, Little Beauty 2nd was again put on test and still milking out of but three-quarters of an udder made 11,641.3 pounds milk and 636.43 pounds butter fat in one year. She will be fresh again inside of 30 days and will again be tested and is expected to make over 700 pounds butter fat. Besides the two official tests mentioned above, this cow was in the California State Dairy Competition and made some 530 odd pounds butter fat in 300 days.

Pet's Pansy of Pine Grove, as a three year old milked 1000 pounds per month for 12 months and this contained 536 pounds butter fat.

Nerio's Elsie Granger as a three and a half year old produced 10,357.8 pounds milk and 588.11 pounds butter fat, which was the largest record for the age and breed at that time.

Imp. Mahy's Nellie 2nd du Douit produced 14,421.4 pounds milk and 676.6 pounds butter fat in one year. This imported cow is a daughter of Iagoo 2nd whose A. R. daughters in this country have been producing sensational records.

Butternut Queen has recently completed four records, including one in the California State Dairy Competition. Her first official record was for 10,884.5 pounds milk and 532 pounds butter fat at four years of age. Her second official record was for 12,794 pounds milk and 665.72 pounds butter fat. Her third official record was for 13,235.6 pounds milk and 689.63 pounds butter fat. Her dairy competition record was for over 600 pounds butter fat in 300 days. This is a grand cow that produces 1000, 1200 and 1400 pounds of milk per month and has been a regular breeder.

Princess of Meadowbrook has recently completed her second A. R. record. Her first of 14,560.2 pounds milk and 722.24 pounds butter fat, was the largest for the breed in the West. Her last record was 14,089.3 pounds milk and 745.79 pounds butter fat.

Besides the above mentioned records there are many others which, while not so high are wonderfully substantial and exceedingly profitable from a milk standpoint. At the average wholesale price received for milk by Elliott-Brant Rancho one cow alone produced \$1310.40 worth of milk. The ten highest producers yielded milk that sold for a total of \$11,231.67 or an average of \$1123.16 each. The ten highest milk records average 12,479.7 pounds, while the ten highest butter fat records average 636.6 pounds, four of the records having been made by cows under mature age.

Besides a very profitable milk business this dairy enjoys a nice trade in young bull calves which are being put at the head of grade dairy herds throughout the state, as it has been found that the Guernsey crosses well with the mixed breeds, increasing the butter fat production and adding a rich yellow color to the milk.

### MUCH PORK — LITTLE FEED

A subscriber from Wasco writes: In the Cultivator of March 9 in "Money in Hogs," a Tulare County correspondent refers to putting 128 pounds on the hog with 275 pounds of corn in two months; a little over two pounds of grain to each pound of increase. To make two pounds of gain a day, or 128 pounds in two months, can be done. I have done that myself and am not an expert hog raiser, but to do it with 275 pounds of grain is an absolute misstatement or over enthusiasm. Ask any expert hog raiser and he will tell you it will take

Patented milk distributing device used in the New De Laval (sectional view)

Some big advantages that you can obtain only in the

## NEW DE LAVAL CREAM SEPARATOR

**GREATER CAPACITY:** Without increasing the size or weight of the new bowl, its capacity has been increased.

**CLOSER SKIMMING:** The improved bowl design, together with the patented milk distributor, gives greater skimming efficiency.

**EASIER TO WASH:** Simpler bowl construction and dies, caulked only on the upper side, make the bowl easier to wash.

**HAS SPEED-INDICATOR:** Every New De Laval is equipped with a Bell Speed-Indicator, the "Warning Signal" which insures full capacity, thorough separation, proper speed and uniform cream.

**EASIER TO TURN:** The low speed of the De Laval bowl, the short crank, its unusually large capacity for the size and weight of the bowl, and its automatic oiling throughout, make it the easiest and least tiring to the operator.

**WEARS LONGER:** Due to its much lower bowl speed, high grade of materials used, and careful and exacting workmanship, the De Laval outlasts and outwears other makes by far.

**ASSURED SERVICE:** In almost every locality there is a De Laval representative, able and ready to serve De Laval users.

If you haven't the spare cash right now, that need not stand in the way of your getting a New De Laval at once. We have an arrangement with De Laval agents which makes it possible for any reputable farmer to secure a De Laval on the partial payment plan—a small payment at the time of purchase and the balance in several instalments—so that your De Laval will actually pay for itself while you are using it and getting the benefit from it.

**FLESH COWS AFTER CALVING**  
Most valuable for bringing after-birth and also for treating barren cows and controlling abortion. B-K kills the infecting germs, heals the uterus, removes the slime and acid—no odor—no straining. More effective than lysol, Lugol's solution, carbolic and creosols—much safer. Send for our Bulletin 5 "Complete Abortion" and testimony from leading breeders. **Special Trial Offer**  
**General Laboratories, Madison, Wis.**  
2122 N. So. Dickinson St.

red in the production of the different cows. The records ranged from 4041 pounds of milk for the ten month period to 24,201 pounds, and from 136.1 pounds butter fat to 928.8 pounds. One cow produced over 900 pounds of butter fat during the ten months, about seven times as much as the average dairy cow in the state. Three cows produced between 800 and 900 pounds of butter fat, eight between 700 and 800, 20 between 600 and 700, 51 between 500 and 600, 93 between 400 and 500, 37 between 300 and 400, 24 between 200 and 300, and only five under 200. Twenty-one of the 29 competing herds had at least one cow, most of them had several, that produced over 500 pounds of butter fat during the record period. Five hundred pounds of butter fat will make somewhere around 580 pounds of commercial butter. With this selling at 60 cents a pound, the annual production of a 500 pound cow will be worth \$348, not counting the value of the calf and the skim milk. Is it strange that cows of this capacity for dairy production if sold at all can command a price of thousands of dollars, or that their offspring sells for sums written in four or five figures? Or is it strange that to owners of the ordinary run of cows, such a production is beyond comprehension, and that he is rather inclined to look upon reports of their production as in the light of fairy tales?

Turning, however, to the results obtained with the grade cows in the competition, we likewise find most creditable records. The best grade cow produced 762 pounds of butter fat contained in over 20,000 pounds of milk. Another produced 729 pounds of fat in about the same amount of milk, and scores produced over 500 pounds of butter fat. The best ten cows in a herd produced on the average 580 pounds of fat during the ten months, and the average for ten grade cows in three other herds came between 576 and 532 pounds.

The high production of these and other remarkable producers among the grade cows in the competition is directly traceable to the continued breeding to pure bred sires in the respective herds, and if this competition does not accomplish anything else than to bring home to the rank and file of our dairy farmers the value of the pure bred special purpose dairy sire for improving the production of common or grade cows, it will have more than justified the labor that has been expended on it. This lesson and that of the value of cow testing associations for herd improvement are strikingly illustrated by the results obtained in the competition. There are many others, and more will doubtless appear as we study the records that have been accumulated.

#### SON OF THE KING

The Western Washington Holstein Breeders' Association sale, to be held at Kent (near Seattle), April 17, will be watched with keenest interest by California Holstein breeders. In the first place there will be offered 85 head of pure bred Holsteins which the management says are of the best in the world, and in proof of that announce that one outstanding animal, King Korndyke Pietertje Pontiac 127387, a son of the King of the Pontiacs who has a list of 233 A. R. O. daughters, is one of the offerings. One reason why the sale of this animal will be watched with interest is that not only is he the son of the King of the Pontiacs, but also the son of one of the great cows in the A. W. Morris & Sons herd of this state, May Korndyke 2nd, a 26 pound three year old who was daughter of May Korndyke, the first 30 pound three year old.

But this fellow is not depending on his ancestry; he calls attention to the fact that he has already three A. R. O. daughters to his credit. These are Jennie Pontiac of Greenbank, Netherland Pontiac of Greenbank, and Fay Pontiac Burke of Greenbank.

For a tabulated pedigree of King Korndyke Pietertje Pontiac, see the sale catalogue which A. B. Winter of Everett, Washington, will mail. F. W. Kiesel, president of the California Holstein Breeders' Association, has a twin brother of this great bull. Others in California are interested in the same blood. Presumably there will be some spirited bidding on this great

animal, and we hope a Californian will prove the successful bidder.

The consignor of this great animal is the Greenbank Company, 800 Leary Building, Seattle, Washington.

#### PURE BRED HEREFORD SALE

The Pacific Coast Hereford Breeders' Association will hold a sale of pure bred stock at the University Farm on April 10. There will be over 50 head consigned to the sale from all parts of this state and Nevada. The animals will be sold at auction to the highest bidder. All animals consigned to the sale must be passed on by a committee appointed by the association.

Many prominent Hereford breeders and agricultural men are expected to be present at the sale. Among those who intend to come are; Dean Curtis, of the Iowa agricultural college; Warren T. McCray, the veteran Hereford breeder of Kentland, Indiana; and R. J. Kinzer, secretary of the National Hereford Association.—W. J.

#### DUROC RECORDS UNITE

It is announced that a consolidation of the two Duroc-Jersey Swine breeders associations is about to be perfected. The new organization which joins the American and the National is to be called the Duroc-Jersey Swine Breeders' Record Association of America, and both secretaries, R. J. Evans and J. R. Pfander, are to be retained.

This is a move that will be welcomed by Duroc breeders everywhere and one that will result in the further popularizing of this great breed of hogs.

The American Red Star Animal Relief, an organization formed at the request of Secretary Baker, is distributing in the ranks of cavalymen and others handling horses in the service thousands of first aid leaflets having to do with the care of the army horse.

The Sacramento County Pomona Grange has by resolution gone on record against the admission of Chinese laborers into this state and favoring the closing of all saloons in this state during the term of the war.

Of every 319 hogs received at the Kansas City stock yards during the five year period 1913 to 1917 one was either dead when unloaded or died in the yards after arrival.

$$2 + 0 = 4$$

(A herd of good registered Holstein cows) -|- (headed by a poorly bred registered Holstein Bull) = (A first class Breeding Herd of registered Holsteins)

When you were four years old you had learned that the first of the above calculations was wrong. Now that you are grown up are you still trying to prove the second calculation above to be correct?

No man, living or dead, has yet been able to secure that result from the addition of the two factors given, although many have tried it, and many more are still experimenting with the problem.

Of the thousands of purebred bulls born, master breeders are able to effect breeding combinations that produce only a comparatively few bulls that have every inheritance and individual qualification to entitle them to positions as mates for the great cows that are expected to transmit their tremendous production through their offspring.

Add SIR VEEMAN KORNDYKE PONTIAC to your herd of good breeding females and you will get the result you are looking for. He is a big, strong, straight, well marked individual, just three years old and already sire of 30 living daughters that are just about as nice a bunch of helper calves as you could expect from one sire, is now bred to 65 good cows and helpers and SAY—he is a son of the great Sir Veeman Hengerveld, universally admitted to be one of the greatest sires the breed has ever produced, and is out of a 30 pound daughter of a 29.88 pound four year old daughter of Sir Veeman Hengerveld. And by the way—have you priced a son of Sir Veeman Hengerveld out of a 30 pound dam LATELY? If you have you know how far up into four figures the prices are now standing. We are going to sell SIR VEEMAN KORNDYKE PONTIAC at public auction, when we sell

#### 69 Registered Holstein Cows and Heifers 11 Registered Holstein Bulls

Comprising the entire Breeding Herd owned by R. F. Guerin  
VISALIA, CALIFORNIA, APRIL 4, 1918

The sale will be conducted under the well known rules of this company, every animal absolutely guaranteed to be a breeder, every animal pledged to absolute sale without reserve, limit, or by-bid, every animal tuberculin tested and sold SUBJECT TO TUBERCULIN RETEST BY THE BUYER.

Among the females are 65 COWS AND HEIFERS bred to Sir Veeman Korndyke Pontiac.

TWENTY-NINE DAUGHTERS OF ARCADY PONTIAC WAYNE HENGERVELD, 27 A. R. O. daughters, the largest number credited to any sire yet developed on the Pacific Coast.

THIRTEEN GRANDDAUGHTERS OF JUDGE HENGERVELD DE KOL, 41 A. R. O. daughters with records up to 34.19 pounds butter in seven days, 1227.46 pounds butter in one year.

• TWENTY-ONE COWS AND HEIFERS with official records up to over 24 pounds butter in seven days.

REMEMBER that 42 COWS AND HEIFERS IN THIS SALE ARE GREAT-GRANDDAUGHTERS OF THE GREAT HENGERVELD DE KOL.

A 20 POUND COW of unusual excellence, and her three daughters, one of them a 22.27 pound three year old.

A DAUGHTER OF SPRING FARM KING PONTIAC 6TH, brother to the first 44 pound cow.

FOUR DAUGHTERS OF WINIFRED HOTALING, who has two other living daughters with records of 32.19 and 33.92 pounds butter in seven days, the latter with 874.12 pounds butter from 19,951 pounds milk in one year.

TEN YOUNG BULLS out of dams with records up to over 28 pounds butter in seven days, and most of them sired by Sir Veeman Korndyke Pontiac, will be sold.

This sale includes the entire breeding herd owned by Mr. Guerin, he retaining nothing except the helper calves from Sir Veeman Korndyke Pontiac. There is only one cow of advanced age in the sale, and the herd has always been particularly free from tuberculosis or abortion, making this an offering of clean, mostly young cattle.

The sale will start promptly at 9 o'clock A. M., Thursday, April 4, 1918, at Mr. Guerin's Sunnyside Farm, about six miles north of Tulare, about six miles southwest of Visalia. Trains will be met on morning of sale at Tulare, which is reached by both the Southern Pacific and Santa Fe.

## ECONOMY

THE KEY TO SUCCESS

Will Increase the  
Cream Check

100 per cent Efficiency is necessary today. ECONOMY STOCK POWDER will bring your COWS up to that standard. It meets the urgent need of the DAIRYMEN. Most ailments common to the COW come on very suddenly and you must be prepared because a few hours delay may mean the loss of a valuable animal.

ECONOMY STOCK POWDER is not a FEED. It is a CONDITIONER. You can eliminate your troubles by feeding ECONOMY and keeping the COW in a healthy condition and well-fortified. You can administer just the help that nature needs at the first sign of deranged digestion, feverish condition or other warning system. ECONOMY will prove effective in restoring a normal condition and its tonic and digestive properties will stimulate the flow of the digestive juices, promote appetite and improve the circulation so that the general health and condition will show a marked improvement.

We want every DAIRYMEN on the Pacific Coast to use ECONOMY. We want to prove to you that what we say is true and if you will mail us the COUPON we will send you a liberal sample FREE.

## Training Course for Machine Milkers

Recognizing the increasing difficulty of securing good milkers, which dairy farmers in all parts of the state are experiencing, the college of agriculture of the University of California has arranged for the conduct of a practical training course for machine milkers at the University Farm, Davis, April 1-12, 1918. This course will be given by members of the staff of the college, assisted by representatives of several of the main milking machine firms. Thorough instruction will be given in operating milking machines and gas engines and also in a number of subjects of importance to milkers and dairy farmers, like the care and management of the dairy herd, testing of milk, judging dairy cows, diseases of dairy cows, calf breeding, farm separators, cow testing associations, etc. The method of instruction is by lectures, demonstrations, and practice work, special emphasis being laid on the latter, so that

students may become proficient in handling the machines and feel able to fill positions as milking machine operators in dairy herds.

The number of students admitted to the course will be limited to 24, and enrollment will be made in the order of receipt of applications, accompanied by the registration fee of \$1.00. No one will be enrolled as a student in the course who does not know how to milk by hand. Students will be required to attend all lectures and other

work scheduled on the program. They should be on hand at the beginning of the course, Monday, April 1, at 2 p. m., and barring unforeseen events, remain until the close, Friday, April 12, p. m.

There will be lectures and instruction given by Professors True on dairy breeds, Woll on milk production and milking machines, Marquardt on milk testing, Baird on care of cream, Davidson on gas engines, Hayes on cattle diseases, also addresses by L. J. Fletcher, C. V. Castle, S. L. Deming, C. M. Vestal, C. L. Roadhouse and others.

A great opportunity for dairymen.

## A Sire Proven Under Dairy Conditions

Arcady Pontiac Wayne Hengerveld was bought in the East some years back at a long price by R. F. Guerin, owner of Sunnyside Farm, Visalia, because he was about the most promising grandson of Hengerveld De Kol

that could be located at that time. He was bred to practically all of the cows in Mr. Guerin's herd and in due course of time had a bunch of daughters to reach milking age. The herd was handled under very ordinary dairy conditions, and it was only within the past few years that official testing was begun. And usually the preparation for official test consisted in bringing the cow that was about to freshen up out of the pasture and letting her stay around the corrals a few days, freshening nearly always without having been fed grain of any kind previously. It was under these conditions that the daughters of Arcady Pontiac Wayne Hengerveld made most of their records, and today his 27 A. R. O. daughters credited to him in the Holstein-Friesian Blue Book are the largest number credited to any sire yet developed on the whole Pacific Coast, and one of them has over 28 pounds butter in seven

days, while another made over 27 pounds butter in seven days and milked over 680 pounds in the same period at the age of four years. Twenty-nine daughters of Arcady Pontiac Wayne Hengerveld will be sold for Mr. Guerin at public auction on his farm, Thursday, April 4, 1918, by California Breeders Sales and Pedigree Company. This is the largest number of daughters of a proven sire ever offered in a single sale on the Pacific Coast, and as they are all bred to a 30 pound son of Sir Veeman Hengerveld they are attracting a great deal of attention from prospective purchasers.

### BERKSHIRE CAMPAIGN

A vigorous campaign of promoting Berkshire interests on the Pacific Coast will be undertaken by the new officers of the Western Berkshire Congress, according to the announcement made following the meeting of the board of directors in San Francisco last week. The first undertaking will be to incorporate the organization and then go out and make strong showings at every live stock show and fair on the Coast along with numerous sales of bred sows, in order to widen the growing of Berkshire hogs.

A big sale and showing will be made at the Los Angeles live stock exposition next fall to introduce Berkshires in Southern California better than they before have been. Northern breeders will make careful selections for this sale as they are of the opinion that the orchardists in the south will find a most profitable business in maintaining one or two good Berkshire sows on the by-products of the ranch. The community board plan will be urged to insure obtaining the service of the best kind of a sire.

At a donation sale to be held in the near future Berkshire breeders hope to raise sufficient funds for the offering of added premium money at the Los Angeles, San Francisco, Oakland, Sacramento and Portland shows. This money will be awarded in the breeding class on animals shown in good breeding condition, a departure from the too frequent practice of overfitting that often results in barrenness and sterility. All females in the over a year classes must show as safely settled with pig. This will discourage the overfitting of sows that often carry off high honors in the showing, but are of little or no value in the farrowing pen where their real merit is judged.

### DEALERS AND THE SILO TRADE

What is the explanation of the indifferent attitude of the majority of implement dealers toward that "tower of treasure" known as the silo? The enormous value of the silo has been demonstrated beyond question. It is everywhere recognized as a producer of wealth and a means by which the full feed value of corn and other crops is conserved. Its presence on a farm stamps the owner as a progressive farmer and increases his standing in a financial sense. Indeed, there are bankers who willingly lend money to farmers who have little financial responsibility when the purpose of the loan is the purchase of a silo. Use of the silo means increase of meat supply, which has been declining for many years; it means increase of dairy products and more manure for fertilization of the soil. In short, it means an increase in the profits of its owner out of all proportion to the cost—an investment which pays enormous interest.

We doubt if there is an intelligent implement dealer in the entire field who will challenge any of these statements. Yet there are only a few dealers who have become directly interested in the sale of silos. What is the reason? It isn't that farmers are building their own silos and using material that does not come within the dealer's scope of sales activity, for a large portion of the present trade is on complete knocked-down silos or on materials from which they are readily constructed, and this material can be handled easily by the dealer. Silos are built of wood, stone, brick, metal or cement, or of combinations of these materials. Silos can be purchased ready to erect. As a rule the silo proposition makes a stronger appeal to the farmer when he understands that he can purchase a silo in

MISS VALLEY MEAD DE KOL WALKER

Winner of Holstein-Friesian Association Silver Trophy for highest producing Holstein, and University of California Gold Medal for highest producing cow of any breed in California Dairy Competition.

## A Few of the Wonderful Cows in This Herd Are:

Miss Valley Mead De Kol Walker, holder of two world's butter records in class at two and three years, made a splendid demonstration of her ability by winning the highest honors in California Dairy Competition over all cows of all dairy breeds. Her sire is Prince Gelsche Walker, one of our herd sires, and her son sold for \$6,500 to W. J. Higdon of Tulare in the Guaranty Sale last December.

Aaggie Acme of Riverside 2nd, 1,331.77 pounds of butter in one year on strictly official test, the world's record. The dam of Miss Valley Mead De Kol Walker is sister to both the sire and dam of Aaggie Acme of Riverside 2nd.

Tilly Alcartra, 40.78 pounds butter in seven days, the only 40 pound cow ever developed west of the Rocky Mountains, and she made the record after five years of semi-official test, during which she produced a total of 123,351.3 pounds milk and 4,819.12 pounds butter, a record unequalled by any other cow of any age or breed.

### Five Great Yearly Record Sires Head Our Herd:

<b>SIR AAGGIE DE KOL ACME</b>	Son of Aaggie Acme of Riverside 2d, 1331.77 pounds butter in one year, world's official record. His three nearest dams average 22,601.7 pounds milk and 1094.21 pounds butter in one year.
<b>SEGIS PONTIAC DE KOL BURKE</b>	Son of Riverside Sadie De Kol Burke, 902.1 pounds milk, 32.25 pounds butter in seven days, 28,826.4 pounds milk and 1085.12 pounds butter in one year, world's yearly milk record when made. His first daughter to finish yearly test as a two-year-old made 18,362.5 pounds milk and 932.43 pounds butter; California record in class.
<b>KING MEAD OF RIVERSIDE</b>	Sire of the world's official yearly record butter cow, Aaggie Acme of Riverside 2d. In a class by himself as a sire of daughters that all average over four per cent butter fat straight through on year's tests.

**PRINCE GELSCH WALKER** Sire of Miss Valley Mead De Kol Walker, 36.88 pounds butter in seven days as a junior three-year-old, world's record in seven days eight months after calving in two classes, and now making a yearly record that will exceed 1100 pounds butter as junior three. Also sire of a 34-pound junior four-year-old, and a list of daughters that are making great yearly records as they are put on.

**KING MORCO ALCARTRA** Son of Tilly Alcartra, the world's greatest dairy cow. She made 40.78 pounds butter in seven days after making 123,351.3 pounds milk and 4,819.12 pounds butter in five successive lactation periods, including several world's records. His dam and sire's dam average 38.53 pounds butter and 842.9 pounds milk in seven days, 29,638.9 pounds milk and 1137.79 pounds butter in one year.

**You can't make a mistake buying a son of any one of these outstanding sires out of our good cows. Buy one and breed the greatest yearly production into your herd**

**A. W. Morris & Sons Corporation** WOODLAND CALIFORNIA

form ready to erect in short order, rather than to buy material in the raw state and follow the process required for building. This fact makes the silo trade a dealer proposition, yet many silos are being sold direct to farmers, or through farmer agents who themselves purchased silos direct from manufacturers, all because the dealers who might have figured in these sales to their advantage ignored or deliberately refused to improve their opportunities.

The value of the silo has been enormously increased by the conditions resulting from the war into which the world has been plunged. If there were a silo on every American farm there would be no shortage of meat or wheat, nor would the babies of big cities be suffering for lack of milk while the producers and the distributors fight among themselves over the price. If there were a silo on every American farm where a silo could be used to advantage—and that means most of the farms—we would have plenty of food for ourselves and our allies. Nor will the food problem disappear immediately after the war ends. Normal food conditions will never be restored until there is a substantial increase in production, hence aside from pressing necessities, the welfare of the world after peace comes depends largely upon such increase. Every silo sold is a step in that direction. — Tractor and Truck Review.

#### PICNIC DAY

With picnic day at the University Farm less than a month off, plans are progressing rapidly for the entertainment of the 20,000 expected visitors. There will be a mammoth tractor demonstration on the farm April 17, 18 and 19. Picnic day will be on the 20th of April.

The parade will be the feature of the day. There will be floats representing every department on the farm. Some of the finest pure bred live stock in the country will be on the floats. Other floats will have demonstrations of agricultural features which will be educational in their make up. Amusing comedy floats will also have their places in the line. Every common type of tractor will be represented, along with the implements and accessories.

Speeches and athletic events will be held during the day. Booths will be provided where visitors can purchase soft drinks, ice cream, hot-dogs, and other things which go to make up a lunch. Coffee will be served free of charge.

The Southern Pacific railroad will grant a rate of one and one-third fare for picnic day excursions. Tickets may be purchased on the 15th or 16th and will be good returning on the 21st, thus taking in the tractor demonstration.—W. J.

Don't try to build business on the basis of your competitor's weakness. Build on your own strength and the strength of your goods.—Exchange.

The bee that gets the honey doesn't hang around the hive.—De Laval.

## A CYCLONE SILO Will Save You Big Money On Your Feed Bill

If you are in the farming business to make money you must save as well as earn—a silo will save you its cost in the first year of its use. With a silo you can convert into first-class stock feed a lot of your product that you have wasted in the past—

### The CYCLONE SILO

—is constructed to stand up under the most trying conditions. Flat iron bands encircle the CYCLONE (as illustrated) in such a way that it cannot possibly twist or warp out of shape—does not get smaller at top than bottom after usage. No guy wires to stumble over.

We, who make this silo, have been manufacturing wood tanks, wood stave pipe, etc., for use in all parts of the world for 25 years—we know our business and our guarantee that this silo is right means something.

Our Silo Feed Book is Free—Send for Your Copy

## IN THE FIELD MAKING MONEY-

## or in the Barn Wasting It

WHETHER your horses work or not, their feed costs you big money. When a horse is laid up you not only lose the cost of feed, but also the profit that the horse would have paid if able to work in the field. Since there is no way to prevent spavin, curb, splint, ringbone, sprains and lameness, your thought should be given to their quickest, surest and most economical treatment. For over 40 years, thousands of horsemen have depended on Kendall's Spavin Treatment. It's the old, reliable, safe remedy that has saved thousands of dollars' worth of horse flesh, to say nothing of the worry, time and trouble it has saved horse owners. You should get and keep a bottle of—

## KENDALL'S SPAVIN TREATMENT

Known for 40 Years as Kendall's Spavin Cure

for emergencies. You never can tell when you'll need it, and when the time does come, you'll be mighty glad you had the foresight to prepare. Here are samples of the thousands of letters we receive from grateful horse owners every year. Mr. J. J. Sandlin, New Hope, Ala., writes:—"I am a great believer in Kendall's Spavin Treatment. A few applications have just taken an unnatural growth off my horse's back, thereby increasing his value \$25.00 at least." Mr. J. B. McCullors, Halesville, Ala., writes:—"Last July I bought a mule for \$65.00. He had a bad Spavin and was unable to work, but after using three bottles of your Spavin Treatment it yielded and he was sold in March for \$180. I advise all horse owners to use Kendall's Spavin Treatment." And Mr. Wm. Booth, of Grovett, Ark., writes:—"I have removed both Blood and Bone Spavins, taking the bunch all off and leaving the horse as sound as he ever was."

Why experiment with other remedies—when you know what Kendall's has done and can do. You can get Kendall's Spavin Treatment at any druggist's, \$1.10 per bottle, 6 for \$5.50. Ask for free book, "Treatise on the Horse," or write direct to

### TREES

**A. R. Rideout**, professional avocado budder. I will bud over your worthless avocado trees to standard varieties, Lyon, Fuerte, Bartley, Sharpless, Sinaloa or any other kinds desired. I guarantee my work. Not a dollar down until the buds start to grow. A. R. Rideout, Rideout Heights, Whittier, Cal. Phone 4971.

**For Sale**—Extra fine Valencia trees, ½ to 1½, all sour root, high buds, very thrifty, clean and straight, not fertilized, excellent soil for balling, nothing better grown. Can supply a limited acreage yet closing out entire lot of these fine trees. S. R. Coate, 564 S. Los Angeles St., Anaheim, Cal. Phone, Anaheim Pacific 403-J.

**Eureka Walnuts are the Best**—Grafted on native black roots. We also have some grafted on paradox roots, which means a hardy root system and a very prolific grower. Prices reasonable, write today, tomorrow never comes. Geyer Bros. Walnut Nurseries, 214 S. Alhambra St., Alhambra, Cal.

**Here is Your Opportunity to Secure A-1 citrus trees.** We offer several thousand 2-year-old lemons; Eureka and Villa Franca, also Washington navel; also several hundred Valencias on sweet root. We call these good trees and we know whereof we speak. **ALBERT JACKSON**, Upland, Cal.

**For Sale**—25,000 2 year old uncultured citrus trees, (Navels, Valencias, Lemons) positively of the very highest pedigreed quality, must be removed from young orchard this season. Price attractive. Write for information to John Hinkle, Lordsburg, Cal.

**Must be Sold**—8000 Valencia orange and Eureka lemons, strong healthy stock, two and three year buds, sour roots. Special prices on orders of 500 or more. Opposite grammar school, Montebello. Tel. Boyle 3311 or address L. F. Thurston, R. D. 3, Orange. Tel. 35J4.

**For Sale: Citrus Trees**—Choice stock, young and thrifty. Selected buds. Valencias and Washington Navel, Eureka and Rialto seedless lemon. Marsh seedless grapefruit; also young seedlings. W. W. Burns, 631 Security Bldg., F. 3110, Los Angeles.

**Let Us Show You Our Ideal twelve hundred acre orchard** from which these perfect yearling citrus trees were propagated. Healthy straight stock, budded one foot high on sour root growing in our own nursery. References. R. R. Morris, East Whittier, Cal.

**Closing Out**—15,000 choice Orange and Lemon trees for sale. Marsh Seedless Grapefruit, Eureka Lemons, Washington Navel and Valencias. Two year old buds, 30 cents each or in hundred lots 25 cents. F. A. Anderson, Elsinore, California.

**For Sale**—Valencia Orange and Marsh grapefruit trees. Stock propagated only from Performance Record Trees of best type. Trees that will bear and insure profits. Write today. L. V. W. Brown, Riverside, Cal.

**By Far the Lowest Priced means of reaching a buyer for what you have to sell** is through classified advertisements in California Cultivator. The cost is only 3 cents per word per issue, with a minimum of 35 cents.

**Citrus Nurseries**, Murphy Oil Company, East Whittier, California. Selected stock for sale; inspection invited.

### TREES

**For Sale to Nurserymen or Large Planters**—Owner of a large block of very fine Eureka Lemon trees will sacrifice at a ridiculously low price to those who will take a large quantity. These are not old dirty culled over stock, but strictly first class trees, clean, thrifty and straight, budded high on sour stock, never have been frosted or stunted in any way. Ground has to be vacated by June 1, so this stock will actually be sold at LESS THAN SEEDLINGS CAN BE RAISED. Address X, California Cultivator.

**For Sale**—Budded avocado trees, Lyon, Fuerte, Sharpless, etc. Lyon and Sharpless budwood for sale. Buds out from bearing Lyon trees. Every tree field grown, boxed and established. At home every Saturday. Advisable to phone or write for an appointment any other day in the week as I am away budding quite a bit of the time. Do not come on Sundays. A. R. Rideout, Rideout Heights, Whittier, Cal. Phone 4971.

**Citrus**—7000 Navels, Valencias, Eureka Lemons, two and three years. Located Whittier and Glendora. 10,000 one year Villa Franca, Lisbon, Eureka and Seedless Lemons. Located near San Diego. Clean thrifty stock. Our own budding, buds cut from record trees. You will not make a mistake in ordering this stock. Cyrus W. Wilhite, Citrus Nurseries, Glendora, Cal. Home 303.

**Lemon Trees**—To close out am offering low prices on 3 and 4 year trees. Fine stock, splendid root system. Bargain prices. Smith Citrus Nurseries, 816 Washington Bldg., Los Angeles. Bdwy. 1720.

**Mission and Manzanillo Olive trees**, all sizes and prices sure to satisfy. Write us at once for any amount. We want to sell. Imperial Valley Nursery & Seed House, El Centro, Cal.

**Valencia Trees**—Very fine 2 year buds, from fine stock. Splendid root system. Get prices. Smith Citrus Nurseries, 816 Washington Bldg., Los Angeles. Bdwy. 1720.

**Sweet Potato Plants for Sale**, 500,000 Yellow Nansemon, April and May delivery, \$2.50 per 1000. F. O. Popenoe, Altadena, California.

**For Sale**—Pink beans. Choice seed. Hand cleaned. Ten cents per pound in lots of fifty pounds or over. A. Osburn, Redlands, Cal.

**Soudan Grass**—A few thousand pounds of Soudan grass seed for sale. Write for prices. L. A. Gunther, Los Molinos, Tehama Co.

**Strawberry Plants**—Everbearing, strong, northern grown. Americus, \$1.50 per 100; \$3.00 per 250. F. I. Moffet, Ellensburg, Washington.

**Sweet Potato Plants**—Yellow Jersey, 5000 or less \$3 per thousand, 25,000 or less \$2.50; over 25,000 \$2. Flake Smith, Santa Ana, California.

**Sweet Potato, Chili pepper** and other vegetable plants in any quantities. Geo. M. Ketscher, Santa Ana, Cal.

**R-O-S-E'S** 50 cents per dozen. Write for Catalogue C, and special prices. Kavan Nurseries, San Bernardino, Cal.

**For Sale**—Connell Blue Potatoes for seed at W. W. Hoyt Ranch, Motor Route A, Phone 865, Placerville.

WANTED

WANTED: HERDSMAN

Single man, who understands scientific feeding and can do veterinary work. Have hundred high grade Guernseys, but going into pure bred. Dairy within twenty miles of Los Angeles. State fully experience, references, wages expected and age. Box A, care Cultivator.

**Wanted**—Place as foreman. Advertiser is thorough in all lines farming, fruit growing and care of livestock. Experienced in working all kinds of labor, both tenant and wage system. Address D., care Cultivator.

**Wanted**—Calendula Flower leaves. Must be dark orange perfectly dry, clean and free from dust, stamen or green leaves. Send sample and state amount on hand and price will be quoted. Address C., care California Cultivator.

**Wanted**—Experienced working foreman for mountain apple orchard. State age, experience, size family, references. I. Ford, 915 W. Cypress Ave., Redlands, California.

**Wanted**—Good bee location. Place with water and a garden patch preferred. E. L. Babe, Del Mar, California.

**Wanted**—500 Buff Leghorn baby chicks. Mrs. H. M. Kinne, R. 1, Box 36-C, El Centro, California.

GEESSE

**Mammoth Geese**—I am booking orders for eggs from my mammoth geese at 25c each. Ship any time. Order all you want. PEA FOWLS—Still have a few pair of young pea fowls at \$10 per pair. Order now, they won't last long. Chas. McNeely, Alhambra, Cal.

GOATS

**Toggenburg Milch Goats**—Rae P. Williams, Federal Realty Building, Oakland, Cal.

MACHINERY

**FOR SALE—USED WINDMILLS, TANKS, TANKS, PUMPS, PUMPS, RANCH TOOLS.**

Plows, Harrows, Cultivators, Southwick Power baler \$250, cost \$300. PLOWS, HARROWS, MOWERS, RAKES. 150 iron redwood tanks, 50 gallons to 25,000, several wagon tanks, 3-16 steel riveted wagon tank, \$85, cost \$200; 30 windmills.

**LISTEN! THINK THIS OVER!** Why stay home from church, fight and cuss an engine all day, when windmills do the work for nothing once installed? PUMPS, PUMPS.

Several single, double acting deep well pumps; 30 cylinders, all sizes. Also two, three, four, single horizontal pumps. Special bargain, single acting deep well head 100 ft. 7 1/2" piping rods, 7-in. cylinder, 8 H. P. Engine, used one year, \$450, cost double. No. 5, two stage, like new, \$175, cost \$400. 3 vertical, \$50, 6, \$90; 7-in. Krogh, fine, \$125; 80-ft. 1 1/2-16 shafting, bearings, pulleys, sundries.

**POULTRY SUPPLIES.** 25 Automatic feeders, \$2.50. Grinders, choppers, sundries, Iron kettle, % by % flexible cable. Remember the new machinery you buy at unreasonable prices will be like these in a short while, but not necessarily worn out. Call, write. Office Demmitt Co., 120 North Main, Upstairs, Los Angeles.

**For Sale**—One 18 h. p. "Olds" distillate engine, mounted on wagon. One 50 h. p. "Olds" distillate engine; one 20 h. p. "Muncie" oil engine; one water well drilling rig; one wooden wagon running gear. The above used machinery may be priced at our shop. Will be sold at a very low figure. Dunn Manufacturing Co., Oxnard, Cal.

**REMANUFACTURED PIPE** All sizes, standard pipe, and wrought iron screw casing. All kinds of fittings. Guaranteed good as new. Write for prices.

WEISSBAUM PIPE WORKS, 169 Eleventh St., San Francisco.

**Gasoline Engines**—the largest stock of used gas engines in California from 2 h. p. to 100. Thoroughly overhauled. Machinery Exchange, 733 North Spring St., Los Angeles.

**Tractor Plow**—Sanders 4 disc; plowed 10 acres demonstration only. Price \$200, with 2 100-lb. wheel weight. G. E. Busch, Santa Rosa, California.

**For Sale**—Southwick Power Baler Gears and Bearings, 1st class. Cost new \$800. Our price \$250. Demmitt, 120 North Main, Los Angeles.

**25 h. p. Western and Lane-Bowler** 10 inch vertical. Good condition. Hale, Owensmouth, Cal.

CATTLE

**For Sale**—Imperial Sir Ormsby De Kol No. 186008. He was 2 years old January 16; is well grown and has large bones; is evenly marked and a perfect individual. His sire is McCloud Prince Ormsby, half brother to Pieterjie Maid Ormsby, 35.56 pounds butter in seven days (world's record 1911); half brother to the sire of Duchess Skylark Ormsby, 1507.36 pounds butter in 365 days (world's record over all ages and breeds). He is for sale only because I am retiring from business. For further particulars and price address J. W. Hastain, Brawley, Cal.

**SHORTHORN CATTLE, SHROPSHIRE SHEEP, Berkshire Hogs** and Shetland Ponies. Get our prices and descriptions before buying. Butte City Ranch, Box C, Butte City, Glenn Co., Cal. W. P. Dwyer and W. S. Guilford, Owners.

**Pedigreed Bull Calves**, Registered \$50.00, unregistered \$25.00. Service bulls \$75 and up. Good individuals from producers. Cows with yearly records at a profit, tuberculin tested. Write or come and select. Horses. N. H. Locke Co., Lockeford, Cal.

**For Sale**—Young registered Jersey cow and thorobred (solid fawn) bull calf. Also fine grade Jersey (tests high) and heifer calf. Robt. Stevenson, Box 387, Watsonville, Cal.

**Twenty-five head good, range Durham** cows, some fresh, others to be fresh this spring and summer; in good condition. For sale at a bargain. Address Box 135, Morgan Hill, California.

**Registered Holstein Bulls** from high producing dams for sale at reasonable prices. Also a few choice females. McAllister Sons, Chino, Cal.

**Venadera Jerseys**, the herd with official yearly records. Calves of both sexes for sale. Guy H. Miller, Route 1, Modesto, Cal.

**Ayrshires (registered)**—A few young bulls, heifers and cows in milk at a bargain for quick sale. A. MacMinn, Phoenix, Ariz.

**Young Holstein Bulls**, bred right, grown right, priced right. Creamcup Herd. M. Holmberg, Modesto, Cal.

**Sunshine Farm Jerseys**—Bulls from officially tested dams for sale. T. E. Greenough, Merced.

**Registered Holstein Bulls** of various ages for sale. Millbrae Dairy, Millbrae, Cal.

**Registered Jerseys**—1 yearling bull for sale. J. R. Carhart, Fullerton, Cal.

TURKEYS

**Mammoth Bronze turkey leaders** of Imperial Valley toms, 8 months weight 26 to 30 lbs., price \$15.00 to \$25.00 each. E. V. Blaschko, Silsbee, Cal.

**Eggs—Bourbon Red and White Holland** turkeys. Toulouse geese, Guineas, Buff Orpington chickens. E. A. McKinley, R. D., Ukiah, Cal.

**Giant Bronze Turkey Eggs** from America's leading strains. M. M. Reiman, Planada, Cal.

**White Holland Turkey Eggs**, \$3.00 per dozen. Satisfaction guaranteed. A. W. Wilson, 1289 E. Grand Ave., Pomona.

FARM LANDS FOR SALE

**Buy Land Where They Raise the Prize Crops**, in Snohomish County. 40 acre farms, \$25 per acre. Ten yearly payments, 6 per cent interest. Visit our office and see the great exhibit of PRIZE WINNING Vegetables, Fruits, Grains, Alfalfa and other Grasses raised on adjoining farms. They prove our claims that this is the best land in Western Washington. Paved roads. Four passenger trains a day. Graded School, Cannery, Creamery, Cheese Factory. Plenty of work for the laboring man in the mills and camps, where 75 settlers are all boosters. DON'T LOSE A DAY in asking for our illustrated literature.

BROWNELL LAND CO., 904 Third Ave., Seattle, Washington.

**Delta Ranch** of 200 acres, to rent on shares for period of two or three years. A tractor, farm machinery and 10 inch irrigating pump, mounted on skids can be rented. A small monthly cash advance can be made by the owner contingent upon due progress and visible work done. The high cost of living cut down by renter raising his own vegetables, eggs and milk. Part of the soil is good for beans, mlo, vegetables and beets. Parts can be double cropped by good management. 50 acres can be made ready for beans in June. Address Bert Chaplin, 5550 Kales, Oakland, California.

**For sale or exchange** for other property or cash, \$500 Homestead Relinquishment 8 miles north of Honey Lake in Creson Valley, Lassen County. Sage brush land, small house. Railroad crosses place. Sidetrack on corner. Solomon Britton, 438 James St., Modesto, California.

**For Sale**—160 acre improved ranch, 11 miles from Long Beach, 1 mile from Westminster. Good alfalfa, beet and bean land. Plenty water and good buildings, \$225 per acre. Possession next September. W. F. Marks, 226 S. Main St., Los Angeles.

**Information Free** about state and government land bargains especially stockraising, homesteads. Joseph Clark, Sacramento.

**For Sale or Exchange**—4 acres in city of Santa Cruz, for Los Angeles or Orange County acreage. William Richard, Santa Cruz, Cal.

**40 acres choice level land**, improved, at sacrifice. No trades. J. L. Buck, Chowchilla, California.

PATENT ATTORNEYS

**Patents that protect** are secured through The PACIFIC COAST PATENT AGENCY, INC., Savings & Loan Building, Stockton, California; send for our little booklet on "Patents."

NORWALK TIRES

Study the features of the Norwalk tread. Note its scientific construction. Big, massive suction cups are placed on both sides of the tread and are reinforced by a heavy circumferential rib and connecting bars. Short lateral bars run to the center of these suction cups and add strength. The Norwalk tread is so constructed to afford MAXIMUM service and highest non-skid efficiency.

HINTS ON GARDENING

"A Few hints on Gardening" is the title of the 1918 catalog of Morris & Snow, 439 South Main Street, Los Angeles. Of course it has the usual feature of an order blank, planting calendar, etc., and it has list of the seeds and plants for sale by the company. In addition it has a fund of information of value to every backyard and frontyard gardener. It tells how to plant, when to plant, and what to plant. It is worth sending for—and that is all it costs.

**Raise your Chicks on Pan-a-ce-a.**

**Avoid**  
*Gapes, Indigestion, Leg Weakness and Their Little Bowel Troubles.*

**DR. HESS POULTRY PAN-A-CE-A**

**Makes Chicks Healthy. The Best Safeguard Against Little Chick Ailments**

Your great problem is not how to hatch chicks, but to raise them after they are hatched. You would like to avoid the distressing losses of the first few weeks. Here's the best advice I can give you: Feed chicks Pan-a-ce-a to keep their general health good. Remember that disease takes the weak, not the strong and vigorous.

**LISTEN TO THIS:** There's a dealer in your town that will supply you with Dr. Hess Poultry Pan-a-ce-a, sufficient for your flock—it's to keep your chicks healthy; it's to prevent gapes and cure the gapey ones—it's to prevent and cure leg weakness—it's to prevent and cure indigestion—it's to regulate the bowel troubles. Guaranteed.

If you want early broilers and pullets that will develop into early winter layers, then feed Pan-a-ce-a. Packages, 25c, 50c and \$1.00. 25-lb. pail, \$3.00; 100-lb. drum, \$11.00.

## Hens in an Orange Grove

Written for California Cultivator by Jean A. Koethen

**T**HAT hens belong on the general farm goes without saying. The case of the hen in the orange grove is far different. There is no waste there for her. She cannot eat cull oranges. If she did, they would not be good for her. And she does scratch up the furrows and make a nuisance of herself generally. Besides, who wants to fence in his whole grove with chicken wire, and if he doesn't, there is trouble with his neighbors. "No," says Mr. Orange Grower, "to keep 100 hens in my orchard is simply impossible. I won't be bothered with them."

Hens may be a bother, and they may be a joy forever. If they are allowed to do as they please, like undisciplined children, they are undoubtedly a bother and a nuisance. If they are kept in their place, confined by wire fencing except at such times as it is proper for them to go abroad, they may be made as profitable as oranges, and yet will not interfere with the crop in the least.

A flock of this sort, numbering nearly 400, is kept by Mr. Harry Bickle on his five-acre grove in Riverside. The hens are never allowed to run. "They hide their nests and bother the neighbors if I let them out," said Mr. Bickle, "and they lay more eggs and are less trouble if I just keep them in the runs."

The poultry houses and runs are in the middle of the orchard, surrounded by a high chicken-tight fence. Together with the house and barn they occupy about a half acre. Another half acre is devoted to the alfalfa patch which provides green feed for the hens most of the year. All the rest of the place is in oranges. To be absolutely accurate, all the place except the space occupied by house and front yard, barn and alfalfa patch, is in oranges, for the chicken runs do not in the least interfere with the orange trees within them. The hens do not care to roost in the trees, nor do they interfere in any way with the crop, while the trees provide much needed shade. In order that the hens may never lack greens, about half an acre at the rear of the place is planted to barley between the trees. In winter when the alfalfa is dormant the barley is run through the clover cutter and fed in troughs and mash.

Green feed is Mr. Bickle's hobby. Cut-up alfalfa or barley is mixed with the moist mash that is given all layers in the morning. It is also mixed with the dry mash that is before them all day. In fact, he tries to keep some green before them all the time. Perhaps this is the secret of their excellent laying.

The houses and runs are arranged in a square, those of the older hens facing east and those of the pullets south. The houses are built in sections, each section being entirely separated by wire or board partition from the adjoining section. Each section, or house, for they are in some cases entirely separate, holds a maximum of 100 hens. Some of the houses are 8x12, with 70-foot run, others 12x12 with 70-foot run. Mr. Bickle runs for the most part about 90 hens to a house, but considers a house 12x12 amply large enough for 100 hens. The houses are all built on the economical plan which provides scratching space under the dropping boards. This assures the hens a dry place in wet weather.

The day I was there Mr. Bickle brought in 23 dozen eggs. That was nearly 75 per cent production for the 370 hens in his runs. During the month of January the same hens laid a total of 4973 eggs, or an average production of 43.2 per cent. The record of the 205 pullets, which is kept with that of the hens, and also separately, showed 1119 eggs for the first eight days of February, or an average production of 68 per cent. A half dozen or so of the flock are Campines, the rest Single Comb White Leghorns, which have been so many times proved to lay more eggs for a given amount of feed than any other breed that there is no question as to their efficiency and economy.

Mr. Bickle keeps no male birds. Each spring he buys day-old chicks, 500 or more, according to the number

of pullets he desires, and raises them in his brooder house. He is thus spared the care of breeding stock and can devote his whole thought to egg production. The cockerels he raises are sent to market as soon as they reach broiler size, and the pullets at six months of age are ready to replace the oldest of the hens.

Few orange growers, perhaps, would care to keep as many hens as Mr. Bickle does, but 100 hens, in a single house 12 feet square with a run half the length of an ordinary city lot, would not be difficult to plan for. If the hens are kept closely confined every day till 3 o'clock they may be allowed to run till supper time with little danger that they will hide their nests. If such range, however, brings them too near the next neighbor's line, there is nothing for it but to keep them closely confined.

Providing green stuff for a flock of hens should be easier for the orange grower than for other farmers. Six months of the year he is expected to grow vetch or cowpeas or some other kind of greens between the rows of orange trees. Just a little of this, run through the clover cutter, will give 100 hens all the green they need. Then there are nearly always odd strips and corners where extra greens, such as kale, turnips, chard or rape, may be planted and watered with the waste from orchard irrigation. In my 15 years on an orange ranch I heard every argument against keeping chickens over and over. Since I have tried to raise chickens and garden on a dry hillside, where water must always be used with the greatest economy and runs off or soaks in clear to the center of the earth when it is not watched, I have come to think the orange grower does not begin to do what he might with his abundance of water.

Then there is the manure from the henyard, tons of it. Did you ever stop to figure, Mr. Orange Grower, what that would be worth to your orchard? You spend hundreds of dollars for commercial fertilizers, and not one of them is as good for your trees as hen manure. If I owned a grove I should feel obliged to keep a cow, a goat, a few ducks and geese and 100 hens, just for the sake of the trees. Rejuvenation of wornout soil can be accomplished in no way so quickly as by keeping stock on it. The orchardists of 30 years ago in Southern California did not realize the need of keeping stock along with their trees, and that is one reason for the great number of wornout orchards. I planted garden this morning in a chicken yard that had not been planted for a year, and oh, the richness and mellowness of it! The portable chicken pen could be used with great advantage in the orange grove. Keep your chickens in one place till the soil becomes foul, then move on. Yes, I know the fences would interfere with irrigating and cultivating, and yet I believe a little planning would smooth out the difficulties. The trees within the yard might be skipped for a month, and the water run around them. The hens would keep them cultivated, and the extra humus would make up for lack of water. This is not theory. I know from years of experience with hens and orange trees on a small place and with very dry soil that when trees are well fertilized with chicken manure and mulched with weeds and other vegetable refuse they do not need the monthly irrigation which most orchardists consider necessary.

The last time I was in Riverside I heard a mythical account of an orchardist who had given up using the cultivator and was letting his hens cultivate his grove. I tried to hunt him up, but when we finally drew up in front of his place, one glance was enough to show the regular marks of cultivator teeth about his trees. If he had ever seriously tried the hen-cultivator proposition he had evidently given it up as a bad job. Any exploitation of the hen as an orchard cultivator must be doomed to failure. She does keep down weeds and eat some noxious bugs, and she is a splendid hand at spreading manure when it has been dumped about the trees, but of these small accomplishments she

does not boast, for her business is laying eggs. Any other service is gratuitous.

Queries

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Pumpkins for Cows

What is the usual yield of pumpkins? When should they be planted? Due to danger of frost injury, which begins in the middle of October, can they be planted in the middle of July or first of August? Is there sale for them?—Subscriber.

Pumpkins should be planted prior to first of July if possible. With favorable season it is possible the frost might hold off till later planting is ripened. As to marketing we would surely not plant till market is arranged for. They are too bulky and not long enough keepers to make possible waiting for market. If gathered in the fall, piled, and covered with leaves, vines, or straw which protects from heavy frosts, they may keep some months, however.

Thornless Blackberry

Is the thornless blackberry a proven success in a hot climate? — Subscribers.

We have never heard of success of this plant under extreme conditions. Would be glad to hear from subscriber.

Early Feed

What is the best crop for immediate planting which will give carbohydrate feed for dairies? Want something which can harvest quickly. The pumpkins I find hard to get mature before fall. What is the best root crop which will not come to grief through frosts? — Subscriber, Riverside.

Perhaps quickest returns in matter of feed at this time would be sweet sorghum. The crop gives lusty growth and affords liberal amount of feed which may be cut daily. Sweet sorghum may be planted at once. Sudan grass is good. Pumpkins planted, say in May or June, should give you fine return before any danger of frost. There are also one or two types of "citron melon" which give immense quantity of feed and are lusty growers. One of the best pumpkins is the "Cheese" pumpkin which has done well and has given immense tonnage in nearly all sections. As to roots, perhaps the ordinary mangel-wurzel, a long red beet, gives biggest tonnage and is a most satisfactory feed. Turnips give large tonnage but influence flavor of milk when fed to dairy cows. These root crops are very hardy and may remain in the ground through the winter.

Earnings in Income Tax

Does owner of property have right to deduct wages for his own service, including the exemption, in making returns of his individual income tax? —Subscriber.

If we understand the question it is, "Does a man have the right to charge off his own wages as part of the expenses of his business?" No, even if he did charge it off it becomes a part of his own wages or income and it would still be subject to the income tax. Bear in mind that the income tax is exactly what it says; it is a tax on one's income, no matter whether it be from interest, profits of business, such as farming, salary, or wages, or any other source. Of course there are exemptions, such as the \$2000 or \$1000 for married and unmarried persons, \$200 foreeach de-

pendent child, and income from 3½ per cent liberty loan bonds, etc.

Beans—Rabbits

I notice in your two last issues your subscribers have been asking about whether rabbits will bother the different varieties of beans. I can state that I planted out 20 acres of Blackeyes last year and the rabbits did not bother much except on one corner they cleaned up about one acre. There not being any bean fields near, all the rabbits centered on my piece. If there had been more beans in that section the amount they would have damaged would have been light. I would not stand back to plant Blackeyes and I would not go to the expense to fence against the rabbits. But as to Tepary beans I have been informed that the rabbits are fond of them so I would prefer the Blackeyes.—C. E. McLaughlin.

Smyrna Figs Drop

I noted the article in the Cultivator of March 16 regarding fig culture. I have Smyrna fig trees that have thousands of young figs, but they always drop off when quite small. Can such trees be budded with capri tree buds,

and how should I proceed to secure a full crop?—Subscriber, Los Angeles.

Budding or grafting these trees would be of no value unless the fruit of the capri were pollenized by the blastophaga, or fig wasp. The method ordinarily followed by Smyrna fig growers is to plant the true Smyrna trees and at the same time plant two or three varieties of the capri fig at the rate of one capri for every 20 Smyrnas. One or more trees should be of the mamme or overwintering fig, and others should be of other types which are producing their fruits at the time the Smyrnas are setting their fruit. Then the distribution of these fruits through the orchard permits the insect to fertilize the blossoms in the fruit of the Smyrnas. In this case, if the orchard is not supplied with any capri trees, then to secure a crop while they are growing it will be necessary to purchase capri figs from some other orchardist and distribute in each one of your Smyrna trees. This question calls for too extended an answer to be properly treated in this column. We would suggest the inquirer write Fancher Creek Nurseries, Fresno, for Practical Horticulture of the Fig.

WITTE IRRIGATING ENGINES

Kerosene-Distillate 2 to 22 H. P.

BELTING

The intelligent farmer of these days understands many mechanical principles; he comprehends what the scientist has proved in the relation of leguminous plants to nitrogen in the soil; what is meant by r. p. m. and by differentials, magnetos; distillate and grease; but it seems he has no conception of the difference between TEST SPECIAL belting and all the other kinds offered to farmers, with no manufacturers' guarantee to back them.

TEST SPECIAL BELTING is made to wear—to give long and satisfactory service—to give years and years of work the cheap belting doesn't do and can't do. It is foolish to buy poor belting, just as it is bad judgment to invest money in wildcat schemes—or cheap machinery that won't stand up to the work.

Write us in detail about your needs—let our engineers suggest what to use and how to apply it.

Protect belting from weather to insure longer life.

## McMillan-Graffen Nurseries

Topnotch Orange and Lemon Trees

Selected buds, fine roots, guaranteed workmanship. Don't think of buying until you price our stock. Address Puente or Spadra, Cal.

100-000 big sour orange seedlings 10 inches and up.

We believe it will be mailed without cost if postage is sent.

### Lentils

Queries often come in as to lentils. So far as we know the most extensive information published on the subject was in the California Cultivator of January 7, 1915. However, we referred the matter to Assistant Farm Adviser Hodgson of Los Angeles County, and he secured from G. W. Hendry of the state university the following:

"Lentils have been grown in California in a limited way in the vicinity of Salinas and in the Stockton delta. Their requirements are about the same as those for peas or Horse beans. It is essentially a cool weather crop and makes its best growth when planted during the fall the same as vetch. In the coast districts, however, it may be planted during March or April in rows about 20 inches apart and the seed dropped from four to six inches apart in the row. Ordinary bean machinery, including planters, cultivators and thrashers, may be used with this crop. The market is fairly staple but is a limited one."

### Dehorning Calf

Dehorning with caustic should be done when calf is very young, in fact, before it is five days of age. When not performed then it is usually deferred until the animal is two years old when there is less possibility of the horns growing out again. It is then done by controlling in chute and by use of ropes so as to stop all motion of the animal's head, then with clean sharp meat or miter saw, or one of the various types of dehorning shears or clippers, the horn is sawed or cut off one-half inch below where skin joins base of horn. Dehorning should always be done in cool weather when there are few flies about.

### SAN JOAQUIN VALLEY BEEKEEPERS' MEETINGS

The closing meetings of a series which have been of interest and helpfulness to the beekeepers of the state will be held next week at various points in the San Joaquin Valley. These meetings have been attended by members of the faculty of the University of California and by experts of the department of agriculture. As a rule they have been held in connection with meetings of farm bureaus of various counties. The dates of the six meetings to be held in the valley are:

Bakersfield/ 10 a. m. to 4 p. m.  
April 1; Visalia, 10 a. m. to 4 p. m.  
April 2; Hanford, 10 a. m. to 4 p. m.  
April 3; Fresno, 10 a. m. to 4 p. m.  
April 4; Modesto, visiting apiaries,  
April 5; Sacramento, 10:30 a. m. to 4 p. m. April 6.

### MILCH GOAT RECORDS

The milch goat is becoming more and more a factor in California production. There are thousands of them in the state and they are increasing rapidly, and if such records as have just been made by the "poor man's cow" at the University Farm increase, their number will be still greater. The university makes this report of a test which began February 26, 1917, and ended February 25, 1918, or for 365 days:

	Lbs. Milk	Pct. Fat	Lbs. Fat
February, 1917	20.7	5.40	1.12
March	255.7	4.26	10.89
April	277.6	3.31	9.19
May	281.4	3.06	8.53
June	290.5	3.10	9.01
July	290.4	3.02	8.77
August	275.4	2.87	7.90
September	233.2	3.07	7.16
October	241.1	3.28	7.91
November	217.2	3.28	7.12
December	196.7	3.46	6.80
January, 1918	197.2	3.54	6.98
February	164.4	3.67	6.03
Total	2941.5		97.41
Average		3.31	

Indian reservations will be open to pasturing of Arizona sheep, so that at least 65,000 head may be accommodated.

It wastes power to take up the slack in loose-hanging track. In the Yuba Ball Tread Tractor the rigid track frame glides over steel balls. The outer tread lies on the ground while the balls roll over it. There's no waste power, and but little friction.

### THE EASTER QUEST

I knew thou wert coming, O Lord divine;  
I felt in the sunlight a softened shine,  
And a murmur of welcome I thought I heard  
In the ripple of brooks and the chirp of bird;  
And the bursting buds and the springing grass  
Seemed to be waiting to feel thee pass;  
And the sky and the sea, and the throbbing sod,  
Pulsed and thrilled to the touch of God.

I knew thou wert coming, O Lord divine,  
To gather the world's heart up to thine,  
I knew the bonds of the rock-hewn grave  
Were riven, that, living, thy life might save.  
But, blind and wayward, I could not see  
Thou wert coming to dwell with me,  
e'eh me;  
And my heart, o'erburdened with care and sin,  
Had no fair chambers to take thee in.

Not one clean spot for thy foot to tread,  
Not one pure pillow to rest thy head:  
There was nothing to offer—no bread, no wine,  
No oil of joy in this heart of mine.  
And yet the light of thy kindly face  
Illumed for thyself a small, dark place,  
And I crept to the spot by thy smile made sweet,  
And tears came ready to wash thy feet.

Now, let me come nearer, O Lord divine;  
Make in my soul for thyself a shrine;  
Cleanse, till the desolate place shall be  
Fit for a dwelling, dear Lord, for thee.  
Rear, if thou wilt, a throne in my breast;  
Reign—I will worship and serve my guest.  
While thou art in me—and in thee I abide—  
No end can come to the Eastertide.

### THE RUSSIAN

From Milestones  
(Continued from last week.)

"We made the polls on the tap of nine. Afterwards we drove back to my car and among us, with the lantern, we got the motor running again, the girl helping efficiently. The big fellow, when we told her good night, astonished me by dropping on his knees and kissing the edge of her skirt. But I put it down to Slavic temperament and took it casually. I've learned since what Russian depth of feeling means—and tenacity of purpose. There was one more incident. When I finally drove the lads up to their village the big chap, who spoke rather good English when he spoke at all, which was seldom, invited me to have some beer. I was tired and wanted to get home, so I didn't. Then the young giant excavated in his pocket and brought out a dollar bill.

"You get beer tomorrow." And when I laughed and shoved it back he flushed. "Excuse—Mr. Sir," he said. "I make mistake." Suddenly he drew himself up—about to the tree-tops it looked, for he was huge, a magnificent lad. He tossed out his arm to me. "Some day," he stated dramatically, "I do two things. Some day I give Mr. Sir somethings more than dollar—and he will take. And—some day I marry—Miss Angel."

"You may believe I was staggered. But I simply stuck out my fist and shook his and said: 'Good. No reason on earth why a fellow with the right stuff shouldn't get anywhere. It's a free country.' And the giant drew his black brows together and remarked slowly: 'All countries—world—is to be free. War will sweep up kings—and other—rubbish. I—shall be—a man.'

"Besides his impressive build the boy had—had—" the Judge glanced at the Russian General whose eyes glowed at the fire. "The boy had a remarkable face. It was cut like a granite hill, in sweeping masses. All strength. His eyes were coals. I went home thoughtful, and the Russian boy's intense face was in my mind for days and I told myself many times that he not only would be but already was a man.

"Events quickstepped after that. I got to France within the year and, as you remember, work was ready. It was perhaps 18 months after that registration day, June 5, which we keep so rightly now as one of our sacred days, that one morning I was in a fight. Our artillery had demoralized the enemy at a point, and sent them running, and we had turned on a squadron of cavalry—old Squadron A of New York, to be exact, brought over much for such occasions. There was one machine gun left working in the Hun trenches—doing a lot of damage. Suddenly it jammed. I was commanding my company, mounted,

and I saw the chance, but also I saw a horrid mess of barbed wire. So I just rode forward a bit and jumped off my horse and ran up to the wire and started clipping, while that machine gun stayed jammed. Out of the corner of an eye I could see men rushing towards it in the German trench, and I knew I had only a moment before they got it firing again. Then as I leaned far forward to reach a bit of entanglement, my foot slipped in a puddle and as I sprawled I saw our uniform and a dead American boy's face under me and I fell headlong in his blood over him and into a bunch of wire. And couldn't get up. The wire held like the devil. I got more tied up at every pull. And my clippers had fallen from my hand and landed out of reach.

"It's good night for me," I thought and was aware of a sharp regret. To be killed because of a nasty bit of wire! I had wanted to do a lot of things yet. With that something leaped and I saw clippers flashing close by. A big man was cutting me loose, dragging me out, setting me on my feet. Then the roar of an exploding shell; the man fell—fell into the wire from which he had just saved me. There was no time to consider that; somehow I was back on my horse and leading my men—and then we had the trenches.

"The rest of that day was confusion, but we won a mile of earthworks, and at night I remembered the incident of the wire and the man who rescued me. By a miracle I found him in the field hospital. His head was bandaged, for the bit of shell had scraped his cheek and jaw, but his eyes were safe, and something in the glance out of them was familiar. Yet I didn't know him till he drew me over and whispered painfully, for it hurt him to talk:

"Yester—day I did—give Mr. Sir something more than dollar. And he did—take it."

"Then I knew the big young Russian of registration day who had tried to tip me. Bless him! I got him transferred to my command and—" the Judge hesitated a bit and glanced at his distinguished guest. One surmised embarrassment in telling the story of the General's humble compatriot.

The General rose to his feet and stood before the fire facing the handful of men. "I can continue this anecdote, from the point, that is, more easily than my friend, the Judge," spoke the General. "I was in the confidence of that countryman of mine. I know. It was so that after he had been thus slightly useful to my friend the Judge, who was the Captain McLane at that time—"

The Judge broke in with a shout of deep laughter worthy a boy of 18. "He 'slightly obliged' me by saving my life," the American threw into the Russian's smooth sentences. "I put that fact before the jury."

The four men listening laughed also, but the Russian held up a hand and went on gravely. "It was quite simple, that episode, and the man's pleasure. I knew him well. But what followed was not ordinary. The Captain McLane saw to it that the soldier had his chance. He became an officer. He went alive through the war and at the end the Captain McLane made it possible that he should be educated. His career was a gift from the Captain McLane—from my friend, the Judge, to the man who is now—" the finished sentence halted a mere second—"who is now a responsible person of Russia.

"And it is the incident of that sort, it is that incident itself which I know, which leads me to combat—" he turned with a deep bow—"the position of the Sena-torr that the great war did not make for a democracy. Gentlemen, my compatriot was a peasant, a person of ignorance, yet with a desire of fulfilling his possibilities. He had been born in social chains and tied to most sordid life, beyond hope, in old Russia. To try to shake free he had gone to America. But it was that caldron of fire, the war, which freed him, which fused his life and the life of the Captain McLane, so different in opportunity, and burned from them all trivialities, and put them, stark-naked of advantages and of drawbacks artificial, side

## PRODUCTS

by side, as two lives merely. It made them—brothers. One gave and the other took as brothers without thought of false pride. They came from the furnace—men. Both. Which is democracy—a chance for a tree to grow, for a flame to burn, for a river to flow; a chance for a man to become a man and not rest a vegetable anchored to the earth as—Oh, God!—for many centuries the Russian mujiks have rested. It is that which I understand by democracy. Freedom of development for everything which wants to develop. It was the earthquake of war which broke chains, loosened dams, cleared the air for the young forests. It was war which made Russia a republic; which threw down the kingships, which joined common men and princes as comrades. God bless that liberating war! God grant that never in all centuries may this poor planet have another! God save democracy—humanity. Does the Senator yet believe that the great war retarded democracy? The Russian's brilliant, smoldering eyes swept about, inquiring.

There was a hush in the peaceful, firelit, lamplit room. And with that, as of one impulse, led by the Senator, the five men broke into handclapping. Tears stood in eyes, faces were twisted with emotion; each of these men had seen what the thing was—war; each knew what a price humanity had paid for freedom. Out of the stirring of emotion, out of the visions of trenches and charges and blood and agony and heroism and unselfishness and steadfastness, the fighting parson, he who had bent, under fire, many a day over dying men who waited his voice to help them across the border—the parson led the little company from the intense moment to commonplace.

"You haven't quite finished the story, General. The boy promised to do two things. He did the first; he gave the Judge 'something more than a dollar,' and the Judge took it—his life. But he said also he was going to marry—what did he call her? —Miss Angel. How about that?"

The Russian General, standing on the hearth rug, appeared to draw himself up suddenly with an access of dignity, and the Judge's boyish big laugh broke into the silence. "Tell them, Michael," said the Judge. "You've gone so far with the fairy story that they have a right to know the crowning glory of it. Tell them."

And suddenly the men sitting about noticed with one accord what, listening to the General's voice, they had not thought about—that the Russian was uncommonly tall—six feet four perhaps; that his face was carved in sweeping lines like a granite hillside, and that an old, long scar stretched from the vivid eyes to the mouth. The men stared, startled with a sudden simultaneous thought. The Judge, watching, smiled. Slowly the General put his hand into the breast pocket of his evening coat; slowly he drew out a case of dark leather, tooled wonderfully, set with stones. He opened the case and looked down; the strong face changed as if a breeze and sunshine passed over a mountain. He glanced up at the men waiting.

"I am no duke's brother," he said, smiling, suddenly radiant. "That is a mistake of the likeness of a name, which all the world makes. I am a born mujik of Russia. But you, sir," and he turned to the parson, "you wish an answer of 'Miss Angel,' as the big peasant boy called that lovely spirit, so far above him in that night, so far above him still, and yet, God be thanked, so close today! Yes? Then this is my answer." He held out the miniature set with jewels.

#### HOME MADE EASTER EGG DYES

Be sure to dye some Easter eggs for the children. Of course it is easy enough to use the dyes from the drug store but it is more fun to utilize the home resources and there are plenty of them. Onion skins when boiled will brown the eggs, stewed spinach or parsley will make them green, pink or red tissue paper will furnish the crimson, blueing will make various shades while the blueing with the spinach water will turn off yellow casts.

If you are planning to build a house sometime, start a scrap book now and in it put every building hint or suggestion that comes your way.

#### CHRIST IS RISEN

The eternal message of Easter is the triumph of the Spirit. Harry Lauder says that our boys in the trenches are "living outside their bodies." Stripped of all but the realities, they have come face to face with God—the Spirit is triumphant. When the great horde of Germans, flushed with victory, was turned back at the Marne by a comparatively small force of English and French, meagerly equipped and unorganized, it was a triumph of Spirit. We standing back of our fighting men, while we realize that we must bend every atom of physical energy to preparation for the conflict, must never lose sight of the greatest force of all, the power of Spirit. All our lives we have been taught that we must align ourselves on the side of righteousness against the powers of evil; now, in this greatest of all spiritual conflicts, where the forces of darkness are battling against the forces of decency, of honor and humanity, we must bring to bear our full powers. For us the chanting of the Easter hymns, the perfume of the Easter lilies, the sweet children's voices are part of a beautiful ceremony, but above all symbols of the best there is in us, the things we give ourselves to protect, the Christ risen in us.

#### RYE AND BARLEY FLOURS

Written for California Cultivator by Ruth Dougherty

Rye and barley flours have just been discovered by many of us. They are sold at the same price as wheat flour—which is not the case with some of the wheat substitutes, notably rice flour which is so delicious but has risen in price even as it has in popularity.

Rye and barley combine especially well with corn meal. Muffins made of half corn meal and half rye or half corn meal and half barley are particularly good.

If you are interested in shorthand methods of doing things try this: Light the oven; divide two tablespoons drippings in a dozen muffin rings; slip muffin pan in oven to melt shortening. Get out the mixing bowl, put flour sifter in it. Measure one cup corn meal, one cup rye flour, one tablespoon sugar, two heaping teaspoons baking powder into sifter. Now it's time to take the muffin pans from oven to let drippings cool. Sift ingredients into bowl; break in two eggs; add one and one-half cups milk (corn meal takes more liquid than does flour—ordinarily I use but one cup). Beat all together quickly with spoon; turn shortening from muffin pan into the mixture with a sliding motion that greases the pan. Beat quickly; put in muffin pans in quick oven. Muffins will be cooked through and crisp and brown in 15 to 20 minutes and are delicious. If ordinary shortening is used of course you will need to add a pinch of salt, but you will like them better made with drippings, especially if your grandfather came from south of Mason and Dixon's line. This liberal use of drippings makes it unnecessary to eat butter with the muffins. Corn meal and barley is just as good and a trifle more delicate.

Another combination that is fine is half rye and half rice flour.

#### WHEAT SAVING MORE NECESSARY

A telegraphic warning from Herbert C. Hoover that a more rigid conservation of wheat in American homes is "vitally necessary" to prevent a most "critical" shortage for exportation to the allies, has been followed by two new and drastic rules promulgated by the United States food administration for California as a measure to further reduce consumption of wheat products. Both rules are now effective throughout the state, to continue an indefinite period.

The first rule removes potatoes from the official list of wheat flour substitutes. No dealer is now permitted to sell potatoes as a substitute for wheat products. A pound of other cereal substitutes, which includes cornmeal, hominy grits, corn flour, barley flour, rolled oats, oatmeal, rice, rice flour, buckwheat flour, soya bean flour, potato and sweet potato flour and feterita flour and meals, must be sold with each pound of wheat flour. Sale of larger quantities must be in the same proportion.

RICE

By agreement between the growers and millers of rice and the food administration, prices for California rice have been fixed as follows: Paddy rice, \$4.10 per 100 pounds to the growers; cleaned rice, \$7.10 per 100 pounds from the mills to the trade, and \$8.00 per 100 from jobbers and wholesalers to the retailers.

HAY

Under date of March 23, Scott, Magner & Miller says:  
Receipts for the past week 1059 tons. Unless conditions change and cars are available for shipment not only will receipts become lighter but it will be a question whether it will be possible for holders in some sections to move their hay to market prior to the advent of the new crop. Trade is very dull and inactive in the Bay cities and dealers show very little inclination to purchase much hay at this time at the prices asked by holders. This no doubt is caused by the recent general rains which we have had of late and the prospects of good hay crops and feed in general. With the warm weather that we have had following the rain, grass of all kinds is growing very rapidly and before we know it the first cutting of alfalfa will probably commence on the river. Reports at present are to the effect that cutting will commence within a month. The natural result of this is that considerable alfalfa has been offered during the week at lower prices than have prevailed for some time.

Citrus Fruit Market

Los Angeles, March 27, 1918.

The orange market for the past week has been a record breaker, seedlings bringing almost as high prices as Navels at all auctions. As high as \$9.65 has been paid for 250 Navels. The chief factor in the big prices has been the restricted shipments owing to heavy rains in the orange districts holding back picking. This condition is now changed and shipments are going freely with ex-

pectation of lower prices. A few sales were noted of decayed fruit around \$2.00 but practically all oranges are now moving under refrigeration, thus lessening possibility of decay. A very few shipments are being made of Valencia's.  
With lemons bringing up to \$9.00 all available fruit is being rushed to the Eastern markets to get a share of the big prices. Practically no fruit is being stored for spring and summer market.

Shipments

Shipments of oranges from Southern California to date since November 1, 1917: 5540 cars; lemons, 1520; total, 7060. To same date last season: Oranges, 13,911; lemons, 2501; total, 16,412. From Central California to date: Oranges, 1901; lemons, 113; total, 2014. To same date last season: Oranges, 4047; lemons, 153; total, 4200. From Northern California to date: Oranges, 202; lemons, 843.

Philadelphia: 1 Nav. 6.60-6.90, 1 lem. 6.80-7.30.

MARKET NOTES

The senate has passed by vote of 49 to 18 the agricultural bill fixing \$2.50 base price on 1918 wheat. The bill provides that the guaranteed prices for the 1918 crop shall be based on No. 2 Northern wheat or its equivalent, instead of No. 1 as under the existing law. The price is not dependent on action of the president, but "is hereby made absolute and binding until May 1, 1919."  
Imperial County cantaloupe fields are showing vines two and three feet long and liberal bloom ready for an early crop.  
Thousands of acres of milo are already being planted in the Imperial Valley.  
The war department is buying liberally of Imperial Valley hay. Holtville alone has shipped over 100 cars, and one dealer at the north end of the valley has contract for 800 cars.  
Thousands of articles not needed in warfare and not food are being denied shipment from American ports. It is possible that coffee may be placed on this list.  
It is now announced to California tomato growers that the order making the \$15 price named by the food administration has been revoked.  
California potatoes are being moved in immense quantities, especially since the recent reduction in price.  
Oranges at Pacific Coast points are commanding around \$7.00 per box, and dealers are threatening reduction of orders at such prices. They maintain that \$5.00 should be the limit.

PARTIAL LIST OF FRUIT SHIPMENTS  
From post card reports to the bureau of markets, United States department of agriculture, Miss Hoey makes report of the following shipments from California for the week ending March 25: Apples, 8 cars; asparagus, 1; artichokes, 8; broccoli, 1; cabbage, 31; carrots, 1; cauliflower, 82; celery, 23; peas, 2; dried apples, 6; dried beans, 15; dried figs, 1; dried peaches, 14; dried peas, 1; dried prunes, 18; lettuce, 104; mixed vegetables, 110; mixed fruit, 4; mixed fruit and vegetables, 11; mixed dried fruit, 4; onions, 2; potatoes, 54; turnips, 1; rhubarb, 1; raisins, 37; Mexican tomatoes into state, 19.

## Mission and Manzanillo

# Olive Trees at Half Price

Because we wish to completely dispose of our Nursery Stock, we offer at this time to sell as specified below, three year old Olive Trees absolutely unexcelled in California, for pedigree, size and condition, at the following unprecedented prices:

Trees caliper ¾ to 1 in. in Diam. 25c each.  
Trees caliper 1 to 1¼ in. in Diam. 30c each.  
Trees caliper 1¼ to 1½ in. in Diam. 35c each.  
Trees caliper 1½ to 1¾ in. in Diam. 40c each.  
Trees caliper 1¾ to 2 in. in Diam. 45c each.

On trees less than ¾ inches in diameter we will make a special low figure.

TERMS: On lots of not less than 2,000 trees, 5 per cent off of above prices. On lots of not less than 5,000 trees, 10 per cent off of stated prices. All prices f.o.b. cars Ontario, California.

Important Notice: Orders filled only on basis of half Missions and half Manzanillos. No order handled for less than 500 trees.

**Los Angeles Olive Growers Association**  
522 Higgins Building, Los Angeles, Cal.

## Perforated Tree Protectors

Why use anything but a PERFORATED PROTECTOR, which allows free circulation of air and sunshine to gradually harden the tender bark. Practically a small LATH HOUSE ABOUT EACH TREE. Protects from Squirrels—Rabbits—Gophers—Hot Sun—Sand Storms — Barking in Cultivation, etc.  
We make a number of kinds. TELL US YOUR PEST, and we will tell you what kind to buy. Get our prices. We can save you money.

### COLLAPSIBLE PLANTING POTS

Why not raise your early Tomatoes, cabbage, chili and egg plant for home use or for market. Do you know that you can start Cucumbers, cantaloupes, melons of all kinds in these pots in flats until they have three and four leaves then plant pot and all, have melons two or three weeks earlier for market. Just the thing for Propagating Eucalyptus and Olive cuttings.  
Write for samples and prices of both Pots and Protectors. State which you are interested in.  
THE EXPAN CO., 935 E. Central Ave., Redlands, Cal.

## THE GREATEST DAIRY COW IN CALIFORNIA

is a title that may well be claimed by MISS VALLEY MEAD DE KOL WALKER, who has added to her many accomplishments the winning of the California Dairy Competition over all breeds, with an actual production of 819.42 pounds butter fat in 10 months, and giving her a total credit of 966.9 pounds butterfat with age handicap as she is only a junior three year old. Keep your eye on her son

### King Korndyke Pontiac 20th

our junior herd sire, for whom we paid \$6500 in the Guaranty Sale. You will want to buy one of his sons one of these days, and in the meantime visit our herd whenever convenient and see the great

cows and heifers with which he is being mated. Our senior herd sire, PRINCE RIVERSIDE WALKER, is by the same sire as Miss Valley Mead De Kol Walker, and is out of the same dam as Aaglie Acme of Riverside 2nd, 1331.77 pounds butter in one year, the world's official record. A young son of PRINCE RIVERSIDE WALKER will introduce this wonderful combination of breeding into your herd. Only a few on hand and they are priced so reasonably that they will not remain unsold very long.

Our Entire Herd is Tuberculin Tested

## Tulare Holstein Farm

W. J. Higdon, Owner TULARE, CAL. H. L. Redd, Herdsman

### "Whenever I Find Korndyke De Kol's Prince in a Pedigree My Respect for That Pedigree is Always Increased"

That statement was made publicly by Mr. A. A. Hartshorn, Hamilton, New York, formerly President of the Holstein-Friesian Association of America, during the last October Sale at Sacramento, which he attended.

Mr. Hartshorn is noted for his accomplishments as a Holstein breeder, and one of the greatest factors in his success has been the way in which he sticks close to the practice of selecting individuals and families that transmit uniformly high production.

### Prince Alcartra Korndyke

our senior herd sire, is a son of Korndyke Queen De Kol's Prince, and his dam is Tilly Alcartra, 40.78 pounds butter in seven days after making a total of 123,351.3 pounds milk and 4819.12 pounds butter in five consecutive years.

PRINCE ALCARTRA KORNDYKE is breeding on. His first five daughters to complete yearly tests as two year olds average 15,333 pounds milk and 675.92 pounds butter.

In a son of PRINCE ALCARTRA KORNDYKE out of one of our good cows you get the greatest certainty of the power to transmit high production and the type that should go with it. Let us price one of his sons to you now before prices advance as his daughters continue to make further high records.

The J. S. Gibson Co.  
Williams, Cal.

## Santa Anita Rancho Anoakia Breeding Farm Registered Holsteins

### Our Junior Herd Sire, Prince Walker Cornucopia

is now in active service and will be bred to a large number of high class cows and heifers during the coming year.

His sire is PRINCE GELSCHER WALKER, whose daughters have commanded the attention of the entire Holstein breeding world through their tremendous records.

His dam is ALBA SADIE CORNUCOPIA CREETIA, 34.14 pounds butter in seven days, and she is by a son of Sadie Vale Concordia, 30.64 pounds butter in seven days, who is the dam of Sadie Vale Concordia 4th, 41.06 pounds butter in seven days, and she in turn is the dam of the sensational sire King Korndyke Sadie Vale and Sadie Vale Concordia 4th Pietje, 38.43 pounds butter in seven days.

This combination of breeding we consider of exceptional promise and an outstanding offspring should result from the splendid females with which he is being mated.

At present we are sold down to a limited number of young bulls, sons of our senior sire MERCI LAD KORNDYKE BURKE, whose dam made 31,034.1 pounds milk and 1201.06 pounds butter in one year. They are priced moderately. Inquiries or orders by mail will receive prompt attention.

## Annual Meeting Orland Jersey Cattle Club

Written for California Cultivator By C. A. Briggs

The visitor in the "Land of Orland" always gets a new vision of great possibilities. All the residents are, compared with other sections of the state, "new comers," see things in bright colors, never wear gray on their hats or have "fog on the brain." They say as one, "We can do it," and then—do it. That should be the trade mark motto of the bright little city and the thriving surrounding country. They have decided to put the Jersey cow on the Orland map, more of 'em than there are in Jersey, and our little side bet is that they will realize this ambition. A year ago a few men and women organized the club. On this their first anniversary they filled a hall and crowded a banquet table loaded with good things prepared by the ladies of the club strictly a-la-Hoover. Everybody enjoyed it. Dr. Hand, the new president, made a delightful toastmaster. J. J. Flaherty of the First National Bank told of the

bank's liberal policy toward loaning money on registered Jersey cows, Chris Myre, manager of the Orland Cheese and Butter Company, in his remarks stated that they produced 713,000 pounds of butter during 1917, paying out for it the tidy sum of \$258,000. E. A. Kirk, secretary of the Glenn County fair which is held in Orland, told of the progress of his work and stated that 103 Jerseys were shown last year and predicted twice that number this year. The leading speaker of the evening was Guy H. Miller, of Modesto, acting as the representative of the American Jersey Cattle Club. He gave a most interesting and valuable talk on feeding rations and handling of Jersey cows on yearly tests.

The club officers elected for next year are Dr. H. W. Hand, president; W. C. Whitsett, vice president; Mrs. D. F. Nickell, secretary; A. J. Morey, treasurer; W. T. Hollinshead, member of the board of directors.

## The Three Individual Holstein Winners

As might be expected the three registered Holstein cows winning the three individual prizes in the California Dairy Competition are all remarkable cows.

First place went by a wide margin to the great heifer, Miss Valley Mead De Kol Walker, with an actual production of 819.42 pounds of butter fat in ten months, and with the credit she received for age, as she is only a junior three year old, she was credited in the competition with 966.92 pounds fat. The breeding and performance of this heifer are too well known to

and in the competition made 764.94 pounds butter fat in ten months. In estimating the record of this cow it must be taken into consideration that she was never before run on test, and it is confidently expected that she is capable of very much greater production. She was bought in the Guaranty Sale by Toyon Farm Association, San Jose, for \$2250.

The winner of third place, Abbie De Kol of East Bank 2nd, is one of the great Holstein cows of California, and a cow whose accomplishments have not received the acknowledgement due them up to the present time. She was bought as a calf by H. E. Cornwell, Modesto, was developed by him, and in his hands made official records of 26.50 pounds butter from 524 pounds milk in seven days. In the previous official year, 1916-1917, she made 14,171.8 pounds milk and 635.63 pounds butter in ten months on semi-official test as a junior four year old, and won first prize in that class in the prize list of the Holstein-Friesian Association of America, hers being the highest record of the year. She entered the California Dairy Competition in the hands of Mr. Cornwell but was sold in his sale last spring to A. M. Bibens, Modesto, in whose hands she completed her record, 656.61 pounds butter fat in ten months. This cow is unquestionably capable of much greater production both in short and long time work. She is a remarkably good individual and an exceptional breeding cow. Mr. Cornwell still owns a 14 months old son of hers that is a fine straight individual, and his son Homer Cornwell owns a splendid two year old daughter of hers that is just now fresh and one of the most promising heifers the writer has come across. Abbie dropped a beautiful heifer calf by Prince Hiske Walker after going into Mr. Bibens' herd and this heifer was recently sold to G. W. Shirk, Modesto, at a price that went a long way toward covering the \$725 which Mr. Bibens paid for the cow.

A Great Cow

Abbie De Kol of East Bank 2nd, winner of third prize in California Dairy Competition. Owned by A. M. Bibens, Modesto.

require repetition here, as she is widely known as the holder of two world's records and as the dam of the \$6500 bull, King Korndyke Pontiac 20th, bought by W. J. Higdon, Tulare, in the Guaranty Sale. It may perhaps not be generally known however, that this heifer made her great record under considerable handicap, for along in the middle of her test, in extremely hot weather, she was shipped a distance of nearly 500 miles, falling off very greatly in production as a result, although she finally got back into her normal stride.

The second place cow, Jennie Terzool Hicks 4th, is rated as one of the great producing cows of the state. At the beginning of her lactation period she made official records of 32.71 pounds butter from 600.30 pounds milk

## Sir Veeman Hengerveld Now Has 16 30-Pound Daughters

Sir Veeman Hengerveld has broken the tie that existed for second place among Holstein sires for daughters with official records of 30 or more pounds of butter in seven days, and now with 16 to his credit he is exceeded in number of 30 pound daughters only by King of the Pontiacs. The latest 30 pound daughter for Sir Veeman Hengerveld is S. V. H. Ida, who is still on test. In a letter to C. L. Hughes, sales manager of California Breeders' Sales and Pedigree Company, W. D. Robens, Poland, New York, who owns Sir Veeman Hengerveld and S. V. H. Ida, states that the latter has to her credit 32.47 pounds butter in seven days as a junior four

year old. This great heifer is full sister to Sir Veeman Korndyke Pontiac, who heads R. F. Guerin's herd of registered Holsteins at Visalia, and who will be sold in Mr. Guerin's sale on April 4.

### THE AMATEUR FARMER

"I hear you are thinking of buying a farm."

"That's my intention," said the city man with a complacent air.

"Well, don't forget the importance of silos."

"Trust me for that, sir. By the way—er—do these things consume much gasoline?"—Birmingham Age-Herald.

## Official Testing Under Way at Westlawn Farms

Observers of Holstein development in California have long been of the opinion that when official testing got under way at Westlawn Farms, owned by H. E. Vogel, Fresno, there would be new chapters written in the splendid history being made by the black and white breed in this state.

In his selections for foundation animals Mr. Vogel has become noted as an exceptionally good judge of individuals, which accounts for the very high average type of his herd, and his selection of blood lines has been no less noteworthy, which promises well for the future development of the herd.

It is not then entirely surprising to have news of a 30 pound cow as about the first gun in the official record advance at Westlawn. The honor falls to the senior four year old, Betsy Lamb-Prilly, who has completed official records of 647.4 pounds milk and 31.37 pounds butter in seven days, 2870.2 pounds milk and 121.43 pounds

butter in 30 days. She is a beautiful individual, as will be noted from her picture elsewhere in this issue, and comes of famous breeding. Her sire is a grandson of Beauty Pietertje Butter King, who is also the grandsire of Prince Gelsche Walker, and he is out of a granddaughter of Joe Gelsche De Kol Burke, the great son of the famous foundation cow Prilly. Her dam is a granddaughter of Admiral Walker Pietertje, whose 57 A. R. O. daughters have splendid short time and yearly records and whose blood is closely interwoven in the great producing fabric of the Holstein breed.

Another nice record recently completed at Westlawn was that of the senior three year old, Theta De Kol of Linwood, who has made 25.67 pounds butter from 523.1 pounds milk. She is sired by Dutchland Hengerveld Sir Gladi, grandson of the famous cow Changeling, and is out of a double granddaughter of Ignaro De Kol, the leading sire of the breed in respect to combined milk and butter records of his daughters on yearly test.

## The Use of Lambing Sheds

**W**HILE this has been a mild winter and lambing in general has been above normal, there is considerable interest in the use and practicality of a shed. The division of animal husbandry at the University Farm at Davis is receiving many requests for Circular 188 regarding lambing sheds.

No doubt many sections are not adapted to the use of sheds. On the other hand where the storms frequently occur and little natural protection is afforded, some shelter would be found very profitable. Sheepmen that have lambled out in the open for many years are reluctant about adopting new methods, but those that have used sheds during the last few years find their losses at lambing considerably reduced.

There are many types of shelter, and prevailing conditions largely determine the most practical shed for a given locality. The shed alone is not sufficient. The owner must attend to every detail to be successful.

The shed must furnish ample room for the number of ewes sheltered. Crowding ewes that are lambing or about to lamb is certain to result in loss. A shed or barn 80x80 will accommodate about 600 ewes. By allowing ample room the ewes that are lambing during the night will usually go quietly into a corner by themselves. The next morning when the gate is opened the ewes will slowly move out, and those having just lambled will oftentimes stay behind in the barn.

The barn or shed should be provided with a number of individual pens (3x3) for a ewe with twins or with a weak lamb, and the barn should be so constructed as to admit of further partitioning for ewes and lambs as required.

During the wet weather it is important to have the shed well bedded with straw or it will become very filthy. The sheep track in more or less mud, and when the fleeces are water soaked the bedding soon becomes wet.

In addition to the shed it is very helpful to be able to hold the ewes with young lambs in small numbers or each day's drop separate for a few days. The ideal arrangement, therefore, is to have a number of ten or 20 acre fields adjacent to the shed which may be used for this purpose although this is not always possible. After the ewes are turned out into the fields it is not necessary to bring them back to the barn at night. From these small fields the ewes are worked together into bands of 200. When the lambs are two or three weeks old they are docked and marked and usually the ewes put into bands of 600 until the lambs are weaned.

When barn room is limited the ewes are sometimes worked in relays, taking out the ones that are about to lamb by inspecting their bags and working them in a chute

and then separating them by means of a dodge gate. This is a precarious undertaking, however, and heavily pregnant ewes cannot be handled too carefully. When this method is followed it would be more practical to breed the bands so as to come in at intervals of three or four weeks.

Handling the ewes very quietly is most important, and the services of a good night man are almost invaluable. There are many details to look after and every ewe is somewhat "different," and the best of judgment is needed for successful lambing.

### "CAFETERIA" SYSTEM FOR HOGS

In general there are two systems of feeding hogs, hand feeding and by means of the self-feeder. The use of self-feeders for swine is comparatively recent. In the "cafeteria system" the various feeds are kept in separate feeders or in separate compartments of a larger feeder. In this system the "liberty hog" is allowed to balance his own ration.

No man has ever been able to give a sensible reason for growing cotton to pay for bacon and lard, instead of growing cheap forage crops, and especially legumes, to raise some hogs. No man has ever been able to give a plausible reason for attempting to grow hogs on pasture alone or on grain alone. A happy combination is the ideal one.

Hog raising can seldom be made profitable without good, permanent pastures and temporary grazing crops where the hogs can obtain the necessary coarse forage besides a large amount of the grain feed. Pasture grasses and forage crops, especially leguminous crops that will grow healthy, vigorous hogs of good quality, must ever remain the basic factor in economical pork production; however, grain must not, on any account, be omitted from the daily ration. A certain amount of grain feed is absolutely necessary to grow hogs with the greatest profit.

The Mississippi Delta station made three tests in which self-feeding was compared with hand feeding. "The self-feeder is desirable in that it saves five-sixths the time required by the old method of feeding two or more times a day in a trough." This is an item to be reckoned with since labor is getting scarcer and higher in price every day.

"It is desirable in that it insures better and cheaper gains." Farmer's Bulletin No. 906 "Self Feeders for Hogs," United States Department of Agriculture, Washington, D. C., gives working plans on construction of the various types which any farmer can use. — William E. Schneider, Swine Specialist, Arizona Agricultural Extension Service.

# REO

"THE GOLD STANDARD  
OF VALUES"

## All the Former Excellence Plus Many Refinements

THIS NEW REO LIGHT FOUR is, in all mechanical essentials, the same as its famous predecessor—Reo the Fifth, "The Incomparable Four."

THAT IS TO SAY, those principles of design and of construction which made that great Reo famous the world over for dependability and low upkeep, have all been retained.

WHEN YOU CONSIDER that that Reo Four remained standard in practically the same form for eight seasons (longer than any other automobile ever built save one);

IT MUST HAVE BEEN wonderfully right at every point; must have been. For during those years an host of rivals and imitators came and went.

AND ALWAYS REO maintained its supremacy.

SO WE FEEL that the best possible recommend for this latest Reo—this new Light Four—is to say that all those principles of design and that same quality have been retained.

REFINEMENTS have been made at many points however.

WE PREFER THE TERM "refinements" rather than improvements. For, truth to tell, no owner of a Reo Four could suggest an improvement in that great car.

REO ENGINEERS, at the same time the most experienced and the most progressive, are always seeking opportunities to refine details of Reos.

AND THEY FOUND WAYS to make parts of this chassis, always the most accessible ever built, still more accessible.

ALSO MORE POWER has been developed in the same motor by refinements of valve mechanism; better balance of reciprocating parts.

THE OILING SYSTEM has not been improved—no use trying to improve on what was already perfection.

ODDLY ENOUGH when we begin to talk about this new Reo Light Four, we feel an inclination to emphasize rather those features in which no changes have been made, than those where they have!

SUCH WAS THE QUALITY—such the dependability—such the low upkeep—such the satisfaction of 100,000 owners, that a better could be made only by refining details of the original model.

AND THIS ONE IS BETTER only because it is the latest, the most refined edition of that Reo Four.

YOUR REO DEALER will show and explain to you the points wherein these refinements have been effected—and he'll tell you the reason for each.

IN A WORD, for your convenience—in every case. For still greater accessibility. For still longer life. And for still lower cost of upkeep.

ASK HIM about these things.

WHEN YOU SEE THIS REO you will say the body lines, the finish, the upholstering are the finest Reo has ever turned out.

A LUXURIOUS EQUIPAGE; as handsome in appearance as it is excellent mechanically; yet at a price less than you had planned to pay for such a car.

DEMAND SEEMS unlimited. At present, almost hopelessly in excess of factory output.

SO ONLY THOSE who decide now and order at once can hope to obtain a Reo Light Four for spring delivery.

TODAY won't be a minute too soon.

## From Low Priced Bulky Feeds to High Priced Products

One of the Factors in Winning the War is the Production of Meats and Fats. To Continue, it Must be Profitable, and to be Profitable Under Present Feed Conditions it Must Take Advantage of Every Improved Method and of Proven Producing Beef Types

**T**HE most intelligent production of animals for slaughter involves a knowledge of the standard requirements of the meat market. Breeders, feeders or investigators who consider only the cost of production and the market value of the live animal, ignoring the demands of the meat trade, overlook one of the most important factors that affect the live stock market and

which should give suggestion to farmers in neighborhoods of small producers. This especially where the producers are people who think and realize the true commercial value of pure blood. Too many farmers have the idea that the pure bred is only for the pleasure of the rich, or at least to give opportunity to the lover of fancy stock, but, as noted in the first paragraph, market reports show otherwise.

A writer in The Journal of Agriculture

Secretary Kinzer, John Letham, the noted writer on Hereford topics, and some of the leading breeders will make the trip to look over Western Hereford interests.

Following is the program of the meeting of range cattlemen which will be held at the University Farm, Davis, on April 8 and 9. Following the Hereford sale on the 10th there will be a Shorthorn sale at San Francisco on April 11, and range cattlemen as well as Hereford breeders will come down from Davis to attend this event.

Monday, April 8

Address of Welcome, Dean H. E. Van Norman; Response, William Mullins; Aims and Purposes, C. E. Rachford, Forest Service, Professor Gordon H. True, L. A. Nares; Markets and Marketing, E. E. Niccoll, bureau of markets, W. J. Dorris, J. B. Curtin, H. A. Jastro and others; Shipping to Market, John M. Fulton of the Southern Pacific and others; Dean Thomas F. Hunt, informal talk; Ralph P. Merritt, food administrator for California.

Tuesday, April 9

Auto drive about the farm; Range Management, Dr. C. H. Shattuck, division of forestry, and others; Feeding for Market, Prof. C. M. Vestal and others; lunch; Livestock Demonstration, University of California; Value of Improved Breeds, Prof. F. W. Wilson, University of Nevada, and others; organization; inspection of sale stock.

THE HEREFORD SALE AT DAVIS

By D. O. Lively

**T**HE sale of Hereford cattle to be held at Davis on April 10, will be a milepost in Hereford history of California.

There will be 50 head of cattle offered for sale, made up of about an equal number of heifers and bulls.

The consignors to the sale are: Cazier & Sons, Wells, Nevada; H. H. Gable, Esparto; W. J. Bemmerly, Woodland; D. O. Lively, Mayfield; Dean Duke, Likely, and Simon Newman Company, Newman.

The Hereford blood lines represented in this sale are unusual. Bonnie Brae, Kansas Lad, Lord Wilton, Gar-

field, Majestic, and that sine qua non of Hereford excellence, Anxiety 4th, are reproduced in the animals that will be put up at the sale.

Dean Duke is consigning a Hereford bull to be sold for the benefit of the Red Cross. Every breeder of Herefords in the sale is putting his reputation back of the animals that are offered. There are bred heifers, a cow and calf, and a number of magnificent yearling heifers that should be quickly snapped up by men who desire to establish pure bred herds of Herefords.

It is an unusual thing for breeders of Herefords to sell females. There is such a demand for bulls to turn out on the range that the breeders find a difficulty in breeding them fast enough. The old order has changed. The cattle raiser of long ago was satisfied with a bull that cost from \$50 to \$100. Modern cattle raising has emphasized the necessity of good blood, and it is the common custom in the range country to pay from \$250 to \$500 a head for bulls that will be taken up by men who know the cattle business, to use as sires for the choice cows from which the range bulls will be bred and selected. These yearling bulls not over-fitted in any sense, not hurt by fat, are western raised, and will in a short time be ready for effective and useful service.

When the three year old steer was cut out of the premium list in the big Eastern live stock shows it was thought that the millenium had come as far as it applied to production of beef cattle at a profit. Now a step further has been taken and the two year old steer has been eliminated. This means that the progressive cattle men have found the most profit in marketing yearling and long yearling steers.

At Chicago last December, there were dozens of carloads of long yearlings that weighed from 1500 to 1200 pounds each. This was not special in any sense but it was the result of close business management and the realization that high priced bulls are the best investment that a cattle man can make.

Continued on Page 434

Count Glory

A great bull owned by W. M. Carruthers, type of some of the great stock which will be at the Shorthorn sale.

may thus fail to follow the most rational lines of improvement in breeding and feeding.

As to demands of the trade, the behavior of the market is best answer. Our readers will recall that California Favorite sold after the 1916 International at \$1.75 per pound. To be sure, that steer had just won grand championship at one of the world's greatest live stock shows. Likewise it is to be admitted that the price was made in part by its advertising value, but there was a foundation of real value in the meat purchased. California Favorite's ancestors were pure bred, and on both sides bred as meat producers.

Another champion at the same show was California Jock. He was no range steer picked up on the Texas plains, but a pure bred of the meat producing type. Now while the demand for beef in these times of war is not for the \$1.75 per pound class, it is for the greatest amount of beef for the least amount of feed. The pure bred have the qualities which enable the most economical production.

The owner of range cattle is appreciating this and is heading his herds with pure bred of best meat producing strain; the small farmer, in a measure, is learning the same lesson, and this will result in the turning of the cheaper, coarser fodders into high priced meat.

We call attention to these points at this time because of the great sales to be held next week. They afford opportunities for securing pure bred which will prove money makers. Lower in these columns we call attention to article on bull associations

Improvement cannot come through using an inferior sire; consequently, when purchasing a herd header, endeavor to secure one which you would expect to throw stock of superior quality to what you already have. Unless a constant effort is made towards improvement the quality of the herd will retrograde; there is no standing still. There are runts in pure bred herds. Only recently we saw a bunch of pedigreed heifers which had been stunted in their development, due to injudicious feeding and care. They were scarcely one-half the size that they should have been. According to the definition given these calves were scrubs. There would be little demand for them for breeding purposes or for beef. It is doubtful if they will ever catch up to the properly cared for heifers even with the required attention. Feed and labor are too expensive to tolerate inferior stock at the present time.

### HEREFORD, SHORTHORN, RANGE CATTLEMEN GET TOGETHER

There will be a great concentration of cattlemen interested in purebred Hereford cattle at Davis on April 8, 9 and 10. The purebred Hereford sale will take place on Wednesday, April 10, at 1 o'clock. At 10 o'clock a. m. on the same date, the Pacific Coast Hereford Cattle Breeders' Association will hold its first annual meeting for the election of officers and the transaction of general business. On Tuesday night, April 9, there will be a Hereford banquet at which addresses will be delivered by the prominent Eastern Hereford men who are coming out to attend the sale.

## Taking the Drudgery Out of the Nursery Business

Written for the California Cultivator by James Mills, Jr.

IN every business there is what is known as a time of "peak load." In the nursery game especially we find a time that calls upon all the resources a man can muster to keep things on the move. This is the time during which the stock is dug, graded, inspected and shipped to the buyers.

The digging is the hard part. Generally the work is done by means of a digger drawn by 14 to 20 horses, depending upon the nature of the ground and the size of the trees. This operation necessitates the laying out

wind. The differential gears were mounted, one on each spindle, and the main drive gear was mounted between these on the main axle of the machine. This arrangement made a differential which took care of the varying strains on the two 400 foot cables and so enabled the man handling the machine to run it straight. By means of a system of gearings this main drive gear was connected to the clutch pulley of the old Rumely. This latter was mounted on one side of the machine as shown in the cut, and was used to control the machine.

It Doesn't Look It but It Is a Tree Digger  
 See Mr. Mills' article.

of the nursery in such a manner that large spaces of waste ground are left at each end of the row for the long string of horses to turn in, or it requires the digging by hand of a large number of trees at each end of the row for the same purpose. In digging by hand a large number of trees are injured and the cost of digging is very much increased. Running the horse machine through the nursery is not without its drawbacks either as it is almost impossible to run a large number of horses through a nursery without doing considerable damage to the trees.

In trying to solve the digging problem the writer got some ideas from the Niles nursery and then evolved

When the machine was ready to operate it was hitched behind a Best tractor and was connected to it by means of a belt. This year bars had to be driven alongside of the machine to keep it from slipping when the strain was put on it, but this factor will be taken care of next year by using I beams for runners. These will sink into the ground and will hold the machine steady when it is pulling the digger.

The tree digger itself is pulled back to the end of the row, each time, by means of two horses. The cables are each pulled back by one horse. The machine then winds up on the cables and pulls a row at the rate of about 85 feet a minute. Six men and four horses handle the complete outfit.

Economical Tree Digging  
 Perfect root system saved on every tree.

the following method: Twelve by twelve beams were bolted together as shown in the cut. Then an old Rumely tractor was dismantled and the parts, after they had undergone a little shaping in the lathe, were put together somewhat as follows: The two wheel hubs were cut from the wheels and the hubs were built up to 18 inches in diameter. These were used as the drums on which the cable was to

By using this machine we were able to run the digger at a greater depth and at a steeper angle than when we were pulling the machine with horses. This enabled us to get out a complete and uninjured root system. Besides helping us to get out a perfect root system, the machine has cut down our digging expenses to a very great degree and it has made the tree digging operation a pleasure rather than a

drudge. As to the saving in the expense of digging the data below will speak for itself and will make any nurseryman think twice before he digs his trees this coming year by means of the old and antiquated

method. In 1915 the total cost of digging and grading was \$1365.19; total number of trees dug, 64,176; cost per tree, \$.0211. In 1916, total cost of digging and grading, \$887.01; total number of trees dug, 76,545; cost per tree, \$.01158.

## Insect Enemies of the Home Vegetable Garden

By F. H. Chittenden, Truck Crop Insect Investigations, U. S. D. A.

**F**ROM the standpoint of their food plants, injurious insects may be grouped roughly into two classes: First; those which are choice feeders and ordinarily attack only a single crop, or crops of a single class, although when they are extremely abundant they may resort to other crops or weeds. Examples are the asparagus beetles and asparagus miner and the large tomato worms, which confine their feeding to plants of a single family. Second, those known as general feeders—insects which are not particular as to their food plants. Some of these devour nearly every form of vegetation that grows in the garden. These include cut-worms and other caterpillars, several forms of leaf-beetles and flea-beetles, plant, thrips, blister beetles, and others. When abundant, some of these pests do great damage, sweeping over large areas and ruining entire crops before they can be stopped.

### Cutworms

Tomatoes, sweet potatoes, and other truck plants, particularly when started under glass, are likely to be injured by cutworms when transplanted. These appear in great numbers in the spring and early summer, and the injury is often complete before the gardener notices it. The chief injury is due to the severing of the stems of young plants at about the surface of the ground. One cutworm can destroy many plants in a single night by cutting off more than it can devour.

Control. The best remedy is what is called poisoned bait. For use in a small garden take one peck of dry bran, add four ounces of white arsenic or Paris green, and mix thoroughly with two gallons of water in which has been stirred a gallon of sorghum or other cheap molasses.

For a large garden, use one bushel of bran to one pound of the arsenical mixed with eight gallons of water containing half a gallon of molasses. This is enough for treating four or five acres of cultivated crops.

After the mash has stood for several hours, scatter it in lumps the size of a marble over the garden where the injury is beginning to appear and about the bases of the plants set out. Apply late in the day so as to place the poison about the plants before night, which is the time when cutworms are active. Apply a second or third time if necessary.

Arsenic and Paris green are deadly poisons. Handle them with great care. Keep young children, live stock, and chickens away from this bait.

In severe attacks by cutworms on low-growing plants, such as parsley, a leaf-arsenate spray will answer in place of the bait.

Clean cultural methods and crop rotations are advisable, as are also deep fall plowing and disking, to prevent recurrences of cutworm attacks. Experienced growers become expert in detecting cutworms and remove them by hand. This often can be done with profit on small patches.

### Grasshoppers

Grasshoppers, while more impor-

tant pests in fields of grain and forage, are often troublesome to vegetables.

Control. Poisoned baits especially adapted to grasshoppers are generally used, for which the best formula is as follows:

Twenty-five pounds bran, one pound white arsenic or Paris green, six oranges or lemons, two quarts cheap syrup or molasses, three or four gallons water. This should be scattered thinly over infested ground or on plants attacked.

Where it is possible to turn turkeys into gardens without injury to the plants, they will make short work of the grasshoppers. When the fields are plowed, disked, or harrowed, this also destroys the grasshopper eggs. See Farmers' Bulletin 691, "Grasshoppers and Their Control on Sugar Beets and Truck Crops."

### Plant Lice

Practically all vegetables, especially cucumbers, cabbages, and peas, suffer considerable damage from attacks by small, soft bodied insects commonly called lice or aphids, but better known as plant lice. These work for the most part on the lower side of the leaves, which become curled or otherwise destroyed by loss of their vital juices. They give off a sweet mixture called honeydew, which attracts ants, flies, and other insects. Plant lice increase with great rapidity by the female giving birth to living young. The different kinds vary in

color from light to dark green or nearly black, grayish, brown, yellow and red. They have comparatively long legs and have feelers attached to the head. Some forms have two pairs of transparent or clear wings. They feed by sucking juices of the plants through a beak. Familiar examples are the melon aphid, pea aphid and cabbage plant lice.

Control. If the plants are grown under glass, plant lice may be killed by fumigation with a nicotine preparation. The form suitable for this work is paper soaked in nicotine which when lighted causes a smudge. Sprinkling plants with fine tobacco dust is of some value, especially if applied early in the morning when the dew is on. Under large vegetable garden conditions standard 40 per cent nicotine sulphate gives almost

perfect results if properly diluted and applied. It may be used at the rate of one teaspoon of sulphate to one gallon of water with a one-inch cube of laundry soap.

### WAR CYCLOPEDIA

The committee on public information has issued "War Cyclopaedia, A Handbook for Ready Reference on the Great War." A paper covered book of 324 pages with one folder map of the war zone in Europe and Asia, which touches everything pertaining to the war from "Acts of Congress" to "Zimmerman Note" and even beyond, for it ends with appendix or outline of principal events of the war from 1914 to December 29, 1917. To secure the book enclose 25 cents in coin to Committee on Public Information, 10 Jackson Place, Washington, D. C.

## Citrus Station Dedicated

Impressive Services at Formal Opening of The Citrus and Sub-Tropical Experiment Station.

THE citrus experiment station is dedicated. A beautiful site, a beautiful building, a large and able faculty provides for California an institution unique and one to which scientists the world over are looking for the solution of many horticultural problems.

President Widtsoe of the University of Utah remarked in his address at the dedication; "This institution aids us all." One half the lands of the earth are under arid or semi-arid conditions, and as more people have died as a result of famine than because of

Wickson, former dean of the agricultural college, gave extended review of the Development of California Fruit Industries. The Trend of Discovery in Evolution and the Utilization of its Concepts was the subject of a paper by D. T. MacDougall of the Carnegie Institute.

The dedicatory services were at the station grounds in the afternoon of Wednesday, March 27.

As soon as Dr. Webber had introduced Dean Hunt as chairman of the meeting came an event not on the program and a surprise to all, the pre-

Dedication of the Citrus Experiment Station

On one of Riverside's gray-green hills where the Citrus Experiment Station is located gathered an audience of citrus growers and scientific people to dedicate the Citrus Experiment Station and Graduate School of Tropical Agriculture.

all wars there is a mission for institutions like this in showing how these arid lands shall be made fruitful."

The dedicatory services were impressive and in the presence of a large number of producers and scientific people of California and other states. President Wheeler of the University of California, Dean Hunt of the agricultural college, Dean Van Norman of the university farm school and many others of the University of California were present, as were representatives of Stanford, the University of Utah, the Carnegie Institute of Washington, D. C., of Massachusetts agricultural college, of the United States department of agriculture, of the state and county horticultural commissions, and withal a big showing of producers of the finest fruit on earth.

The exercises began in the morning at the Riverside polytechnic high school with F. O. Storey presiding.

Dean H. E. Van Norman gave a practical talk on Dairying in Relation to the Citrus Industry. It had good practical suggestions as to upkeep of citrus orchard fertility and will be liberally quoted from in the next issue of the Cultivator. Prof. E. J.

sensation by Prof. Wheelock, superintendent of Riverside's schools, but representing the chamber of commerce of Riverside, of two banners, one the Blue and Gold of the University of California and the other Old Glory. The Sherman Institute band played the Star Spangled Banner as four high school girls raised the two banners on their separate flagpoles. Addresses were made by Pres. Wheeler, Dr. Herbert J. Webber, and Dr. Jno. A. Widtsoe, president of the University of Utah. The Cantadores added to the pleasure of the occasion by several chorus songs, and the exercises of the afternoon closed with inspection of the buildings and band concert. The most pleasurable feature of the day was the reception in the evening at the home of Dr. and Mrs. Webber.

The Citrus Experiment Station and Graduate School of Tropical Agriculture at Riverside is a part of the college of agriculture of the University of California. The state legislature in 1913 provided for the establishment of such an institution in Southern California and appropriated \$60,000 for the purpose of the necessary land and water rights, \$100,000 for laboratory

## Kill Squirrels Gophers

The only exterminator that is 100 per cent efficient and guarantees results or money back, is

**KILMOL**  
SQUIRLEGOPHENE

It contains special chemicals. Kilmol fumes not only asphyxiate the squirrel or gopher, but eat away their lung tissues. Even should the animal reach fresh air, he can't survive. No other exterminator is as effective as Kilmol. That's why Kilmol costs a little more—but economy in labor warrants the advanced price. For best result use repared waste balls saturated with Kilmol.

New formula of U. S. Government Poisoned Barley is effective in dry weather. Kilmol and U. S. Government Poisoned Barley are used and endorsed by the biggest and most successful ranch owners.

Remember, results guaranteed or money refunded.  
Your local dealer carries Kilmol, Waste Balls and U. S. Gov't. Poisoned Barley.

Mfg. by Herbert F. Dugan, 1170 Sutter St., San Francisco

buildings, and \$25,000 for a director's residence, barns and minor buildings.

A large number of sites for the institution were offered and after a thorough consideration the regents of the university on December 23, 1914, voted to purchase the site at Riverside. The location embraces a tract of 475 acres of land, of which about 300 acres are tillable, the remainder being rough, hilly land, suitable only for range or forestry work.

It is located two and one-half miles from the center of the city of Riverside and is traversed by the paved Box Springs Boulevard, the principal interior road to San Diego.

The laboratory buildings are located in a commanding position at the base of a rocky peak, several hundred feet in height; while the residences and farm buildings form separate groups a short distance away. The architecture of the laboratory buildings in general is of the mission style so far as this type of architecture lends itself to laboratory construction. The buildings are constructed of cement,

Herbert J. Webber

Dean of the Riverside station, who before coming to California served with the United States department of agriculture in Florida citrus orchards.

brick and hollow tile, plastered on the exterior. The group of laboratory buildings comprises a main central building, 154 feet by 57 feet, and two wings (one only as yet erected), each 100 feet by 55 feet.

Regarding the staff in charge of the work of the station, Dr. Webber said: "The institution now employs 14 scientific investigators, six laboratory and field assistants, one librarian, four stenographers and 14 farm foremen, teamsters and laborers.

"The chemistry division is headed by Dr. W. P. Kelley, formerly chemist of the government Hawaiian experiment station at Honolulu.

"The division of plant pathology is headed by Dr. H. S. Reed, formerly pathologist of the Virginia Agricultural College.

"The division in charge of the study of plant disease is headed by Dr. J. T. Barrett, formerly pathologist of the Illinois experiment station.

"The leading professor of the division of entomology is Prof. H. J. Quayle, formerly assistant professor of entomology in the college of agriculture at Berkeley.

"The division of plant breeding is led by Dr. L. D. Batchelor, former professor of horticulture in the Utah College of Agriculture.

"The division of orchard management is in charge of Prof. R. S. Valle, formerly horticultural commissioner of Ventura County.

"Associated with these departments as investigators are Dr. H. S. Fawcett, Dr. O. F. Burger, C. O. Smith, E. E. Thomas and Dr. H. B. Frost."

Dr. Webber took charge as dean and director in January, 1913.

## Bean Culture

Written for California Cultivator By D. F. Reichard

### Moline Four-Row Bean Planter Saves Time Planting Any Kind of Seed

For the man who has large acreages to plant, not only of beans but any other seed as well, the Moline Four-Row Bean Planter is a great time saver. It does the work just as well as the ordinary two-row planter, and twice as fast.

Any kind, shape or variety of seed ranging in size from cane seed to lima beans can be planted in the best possible manner in the shortest time by the Moline Four-Row Bean Planter.

You have the choice of using either edge or flat drop plates. Each style has its advantages—both styles are regularly furnished.

Seeds of a rounded character—such as kaffir corn, milo maize, navy beans, cranberry beans, etc., are best handled by a round hole plate, while such seed as kidney beans, lima beans

and field corn the edge drop plate with cells properly fitted is better adapted.

A uniform planting depth is maintained because each furrow opener is held to the ground independently of the others by spring pressure. Rows from 24 to 36 inches apart can be planted with the Moline Four-Row Bean Planter.

It is well constructed throughout, seed cans and furrow openers being supported on a heavy, square and very stiff steel pipe.

Seed cans are easily tipped to change plates or empty them of seed.

Steel marker is easily and quickly adjusted.

The Moline Four-Row Bean Planter will save you time this year. See your Moline dealer now, or write us for further information.

### The "California Special" Plants Every Variety of Beans Including Horse Beans

Make sure of a good stand of beans on your valuable bean land, by using the thoroughly dependable "California Special" Bean Planter.

Each planter is equipped with a set of rotary droppers adjustable to plant any variety of beans from small white to large limas. This is the best and most dependable dropping device known for planting beans. The dropper rotates without friction through the hopper cupping the seed as delicately as though each were selected by hand. The seed passes from dropper to boot which runs at any depth set. Shoe runners will be

furnished where desired. Each boot is hinged with wooden peg. Open wheels run back of boot. These press inward and downward around the seed but do not pack the ground directly on top. The California Special is the last word in bean planting machinery. The frame is especially strong—is made low for orchard work if desired and is so evenly balanced and adjusted as to make it easy to handle. Made in 2, 4, 6 and 8 row sizes.

This planter will save the price of itself in not injuring the seed bean during the process of planting.

**Ventura Manufacturing & Implement Co.**  
Ventura, Cal.

Rotary dropping device insures uniform planting. It cannot injure any of the seed.

Catalogue and circulars sent on request. We make a complete line of bean and beet tools.

**T**

HE time for planting field or commercial beans will soon be at hand. An article in the Cultivator of March 16 told how to prepare the soil and

keep it in condition during the winter and spring till planting time, in the case of dry-farming as well as under surface irrigation conditions. With this latter system considerable acreage will be planted as a second crop. When irrigating for a crop after the first one has been harvested be sure to get every bit of the plot wet, as in maturing the first crop, which is usually grown on rainfall, the soil is almost depleted of its moisture. Plow thoroughly six or eight inches deep.

Before planting go over the whole field with a harrow to kill any weeds that may have started, which is cheaper than hoeing after the crop is up.

Commercial bean planting properly begins when cold nights are over and the soil has taken on enough warmth to germinate the seed. Plantings may be extended to as late as August 1 for quick maturing varieties on irrigated land in sections where frost does not come before the last of October.

#### Planting

Planting is done by drilling them two to three inches deep according to the variety of the beans planted and the condition of the soil. The larger beans are put at the greater depth. The closer the moisture is to the surface the shallower the beans should be planted. Cover the seed well.

The rows should be 30 to 36 inches apart according to the tools or machinery you are using. Should there be a rain after planting and before the beans are up go over the plot lengthwise of the rows with a harrow with the teeth sloped well backwards so as not to tear up the beans. This will break any crust that may have formed and leave a fine mulch on the surface.

#### Cultivation

Cultivation begins with the arrival of the second character leaf on the

young plants. Use small toothed cultivators the first time so as not to cover the small plants with dirt. Three or four cultivations at intervals of two weeks will carry the crop through under usual conditions.

Where it is necessary to irrigate furrow out between the rows by attaching a furrower to the cultivator when making the second cultivation. Irrigate and, as soon as the ground is dry enough to be worked, cultivate, leaving a furrow for future irrigations. Water should be applied often enough to keep the crop in continuous growth until the pods begin to ripen.

#### Harvesting

Harvesting begins when the leaves are falling freely but before the plants are dead. This is done with an implement made for the purpose, which straddles two rows, cutting the plants off with blades that run just under the surface of the ground and leave the two rows in a single windrow. The bean cutter is drawn by horses. Let the vines partially dry after cutting, then pile in small bunches to thoroughly cure before thrashing or stacking. It is preferable to thrash beans as they are drawn from the field, for the less they are handled the less loss there is from shelling.

#### Thrashing

Thrashing should be done by an experienced person who understands bean thrashing. A regular grain thrasher will do if properly rigged. Throw large canvases over the bottom of the wagons used to haul the beans to the thrasher to catch any beans that might shell out in hauling and handling.

If the beans grown are only a small lot they can be (1) flailed out on the barn floor or on a canvas, (2) they can be piled three or four feet high and tramped out by driving a team of horses attached to a disk cultivator over the pile until the beans are thrashed out. To separate the chaff, if one does not have a fanning mill, toss the thrashings into the air with a scoop shovel on a windy day. This should be done in an open space where buildings or trees will not break the wind.

#### Weevil

Weevil may be controlled to a certain extent by planting after June 1 in the inland sections where weevil are usually prevalent. Along the Coast weevil are found only occasionally. Beans that are subject to weevil attack should be thoroughly treated with carbon bisulphide as soon as possible after thrashing. Use containers as nearly air-tight as possible. Apply the carbon bisulphide at the highest point by pouring the amount desired into an open dish and placing it on the uppermost sack. For small quantities use one ounce carbon bisulphide to a ten gallon container; for larger quantities use one gallon to 10 by 10 by 10 feet space. Leave the beans in about two hours. Watch the beans closely after they are stored to see that weevil do not develop later. At the first signs treat them again, as a few warm days will hatch out enough weevil to ruin the whole crop. Treating with the carbon bisulphide has little or no effect on the germination unless indulged in too frequently and in unnecessarily heavy doses.

As to the varieties of beans to

## A Word to the Wise

Food Administration Makes  
Another Appeal  
for Conservation.  
Homemakers,  
Bakers, Grocers,  
All Given Opportunity to Save as  
War Measure

The United States food administration issues the following:

If we are to furnish the Allies with the necessary proportion of wheat to maintain their war bread from now until the next harvest, and this is a military necessity, we must reduce our monthly consumption to 21,000,000 bushels a month as against our normal consumption of about 42,000,000 bushels, or 50 per cent of our normal consumption. Reserving a margin for distribution to the Army and for special cases, leaves for general consumption approximately 1½ pounds of wheat products weekly per person. Many of our consumers are dependent upon bakers' bread. Such bread must be durable and therefore requires a larger proportion of wheat products than cereal breads baked in the household. Our Army and Navy require a full allowance. The well-to-do in our population can make greater sacrifices in the consumption of wheat products than can the poor. In addition, our population in the agricultural districts, where the other cereals are abundant, are more skilled in the preparation of breads from these other cereals than the crowded city and industrial populations.

With improved transportation conditions we now have available a surplus of potatoes. We also have in the spring months a surplus of milk, and we have ample corn and oats for human consumption. The drain on rye and barley as substitutes has already greatly exhausted the supply of these grains.

To effect the needed saving of wheat we are wholly dependent upon the voluntary assistance of the American people and we ask that the following rules shall be observed:

1. Householders to use not to exceed a total of 1½ pounds per week of wheat products per person. This means not more than 1¾ pounds of Victory bread containing the required percentage of substitutes and one-half pound of cooking flour, macaroni, crackers, pastry, pies, cakes, wheat breakfast cereals, all combined.

2. Public eating places and clubs to observe two wheatless days per week. Monday and Wednesday, as at present. In addition thereto, not to serve to any one guest at any one meal, an aggregate of breadstuffs, macaroni, crackers, pastry, pies, cakes, wheat breakfast cereals, containing a total of more than two ounces of wheat flour. No wheat products to be served unless specially ordered. Public eating establishments not to buy more than six pounds of wheat products for each 90 meals served, thus conforming with the limitations requested of the householders.

3. Retailers to sell not more than one-eighth of a barrel of flour to any town customer at any one time and not more than one-quarter of a barrel to any country customer at any one time, and in no case to sell wheat products without the sale of an equal weight of other cereals.

4. We ask the bakers and grocers to reduce the volume of Victory bread sold, by delivery of the three-quarters pound loaf where one pound was sold before, and corresponding proportions in other weights. We also ask bakers not to increase the amount of their wheat flour purchases beyond 70 per cent of the average monthly amount purchased in the four months prior to March 1.

5. Manufacturers using wheat products for non-food purposes should cease such use entirely.

6. There is no limit upon the use of other cereals, flours, and meals, corn, barley, buckwheat, potato flour, etc.

Many thousand families throughout the land are now using no wheat products whatever, except a very small amount for cooking purposes, and are doing so in perfect health and satisfaction. There is no reason why all of the American people who are able to cook in their own households cannot subsist perfectly well with the use of less wheat products than one and one-half pounds a week, and we specially ask the well-to-do households in the country to follow this additional program in order that we may provide the necessary marginal supplies for those parts of the community less able to adapt themselves to so large a proportion of substitutes.

In order that we shall be able to make the wheat exports that are absolutely demanded of us to maintain the civil population and soldiers of the Allies and our own Army, we propose to supplement the voluntary cooperation of the public by a further limitation of distribution and we shall place at once restrictions on distribution which will be adjusted from time to time to secure as nearly equitable distribution as possible. With the arrival of harvest we should be able to relax such restrictions; until then we ask for the necessary patience, sacrifice and cooperation of the distributing trades.

# Extra Tested

**To Cut Your Tire Costs**

Racine Country Road and Racine Multi-Mile Cord tires are known for the economy they bring.

Extra endurance—extra mileage—extra value for the money—result from many Racine Rubber Company *Extra Tests*. Each means saving for the user, not in price, but in better, longer service.

## RACINE Country Road and Multi-Mile Cord TIRES

These *Extra Tests* are thorough and exacting. For instance: all fabric is *Extra-Tested* for tensile strength in a specially designed machine which makes certain of the necessary strength to resist the pounding of the road—the rough bruises of country driving.

**Full Measure of Service**

comes with every tire bearing the Racine Rubber Company name.

Racine Country Road Tires—5000 Mile Guarantee—are specially built and *Extra-Tested* to meet the hardest demands of country road driving.

Racine Multi-Mile Cord Tires, the peak of cord tire quality—*Extra-Tested*.

Also *Extra-Tested* red and gray tubes.

For Your Own Protection Be Certain Every Racine Tire You Buy, Bears The Name

**RACINE RUBBER COMPANY**  
Racine, Wis.

## Test Special Belts

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscribers must have mentioned the Cultivator when writing the advertiser.

**THIS WEEK'S COVER**

The Santa Clara Valley is holding its Blossom Festival today and tomorrow. This has been for several years a regular feature. We attended one of those festivals and will always remember the impression made. If other festivals would induce other people to visit the hills above the Santa Clara Valley and look over the blossom covered orchards surely the fame of the valley would be extended, but, fortunately, Santa Clara has no copyright on the blossoms of our orchards, and many another valley has scenes of as great beauty though not so extensive as those which lie before one's eyes when standing upon the hills near Los Gatos, Saratoga or many other near-by points. Besides the beauty there is inspiration this year in the scene because of promise which the flowers are giving of more food for a hungry people.

"Trees bloom in the April weather,  
Petals drifting across the sky."

**SAVE FOR THE BONDS**

The fact that every bond of our liberty loan is backed by more than \$300,000,000,000 of national resources and, further, that in 1888 U. S. Bonds sold as high as 130 and in 1901 went to the top notch of 139.7 on the stock market is not needed to induce true Americans to invest in the third liberty loan, the drive for which begins this week on the first anniversary of America's entrance into the war.

We may make money by investing in liberty bonds, but the rigid economy which some people are practicing in order to be truly patriotic and aid in the successful prosecution of the war is inspired by entirely different motives. The United States will pay dollar for dollar and every penny of interest. She will win in this war,

and it will be because of the patriotic work of our people from the Pacific to the Atlantic.

**POTATOES**

Potato growers of California feel justified in asking a pointed question. Certainly a very difficult situation is confronting them. Why, with the present freight congestion, are hundreds of carloads of potatoes being shipped from far away points into sections which already have glutted potato markets? Los Angeles County farmers have the problem of disposing of thousands of tons of potatoes within the next few weeks or seeing them rot, yet car after car of potatoes from other sections of this state and from the Northwest are sold in our markets daily. Stockton and the Bay markets are receiving the same treatment. Perhaps this is wise. Of course it is easier for the market to supply those goods for which a demand has been created, but this is time of war, and local products which may not always afford all the consumer demands, from a food standpoint equal in every way the imported article.

Growers in all sections of the state have been appealed to to grow potatoes and to grow everything which will sustain life, and consumers have been appealed to to buy locally grown material so far as possible and save the strain on transportation. If the market and the people will not voluntarily comply with this request, should not the food administration or others in authority take steps to bring about correction of glutted markets and choked transportation?

**HONOR TO FRANCE**

The most heroic figure in all this world war is that of France. For nearly four years her men have fought like tigers, have remained absolutely steadfast, and today, facing partial starvation, still stand and are fighting as men of few other nations have fought. Of course there are the Belgians, the Servians, and men of other nations who have shown the same spirit, but from sheer brute weight these nations have been compelled to give way. The soldiers of England, of Canada and of Australia have proved wonderful fighters, but as a nation those peoples have not been tested as have the people of France.

The credit for this wonderful staying power of France has been most justly given to her women. As to the women of France and the work they are doing one writer has said:

"My words are not powerful enough to do even scanty justice to the most heroic figure in the modern world, and of ages past — the woman of France. Of the healthy men who are not engaged in the military service in France, practically all are engaged either in transportation or in the manufacture of munitions, leaving the agriculture absolutely to the women. Not only this, but they have stepped into the place of work animals; you can go into any section of France today and see women of magnificent, noble womanhood hitched to the plow and cultivating the soil. All of the agriculture rests upon their shoulders. The home, always an extremely efficient home, maintains a few old men, the wounded, and the tubercular. Uncomplaining, with high devotion, with an attitude that amounts almost to religious exaltation, the woman of France bears the burden."

The American soldier needs no inspiration from any other people. His

duty and his love for his flag are sufficient, but if example were needed France offers it.

**UPHOLDING THE FLAG**

We believe in honest and constructive criticism; we believe that no arm of the government should feel that it occupies a position so secure that it may not have its mistakes referred to in a truly patriotic way. This is a government of the people, and if that form of government is to continue, the people must be not only intelligent and observant of the manner of administering that government, but true to themselves and to our flag, and not take on the carping or fault finding attitude because of mistakes which have been made and which our government is trying to rectify.

There has been many a loss to our farming interests because of some of these mistakes, and some farmers have felt that injustice called for resentment. One of the best expressions as to the attitude we may well take at this time in this matter is given by the editor of the Breeders Gazette in a recent issue. He says:

"The Gazette does not often preach; but, men and brethren, this is a time when none can skulk nor hide, except in shame. It is a time to strangle all that is sordid and unworthy in word, deed or thought, and once for all declare ourselves. Maybe wheat should command a lot more money. We think it should. Maybe we lost money on those lambs or steers. Clearly the eat-less-meat campaign was carried too far, and well-meaning officials and citizens unintentionally wronged and hurt patriotic people who were loyally trying to respond to their country's call for meats and fats at financial risks to themselves. But what of it? There is just one way to figure: treat any loss or disappointment that may be incurred as a part-payment of the debt you owe the world in which you live. It is a part of the price of wanting to live on in a world fit to live in, and no price is too great to pay that prevents our country's flag from going down in defeat before Prussian cannon. That is The Gazette's idea of the standard that every loyal American has got to fly this spring, if he wants to be counted worthy of bearing the name."

**This Week's War News**

Gov. Stephens reviewed the troops at Camp Kearny last week.

All America is in line for the third liberty loan drive which begins today.

"Be loyal and do your best for America. If you won't help America, go to Germany where you belong."

Americans' wheat ration, six pounds per person per month. Card system soon in force. No hoarding permitted.

Everyone of the seized ships of Holland is now on the way, carrying American reinforcements and supplies.

Quebec has been the scene of serious riots during the week. Many have been killed. The cause of the riots is the activities of the anti-conscriptionists.

The Italian front reports no serious activity, but the Austrians are known to be massing troops, and it is anticipated that another drive will begin within a short time.

It was reported that an uprising of loyal Russians had retaken Odessa and driven out German troops. This lacks confirmation, and so far as

known little of interest has occurred in Russia.

The famine in Finland and in fact many other portions of Europe is becoming more acute.

Two members of the faculty of University of California have been dismissed by the regents after the filing information with the board by officers of the Navy.

Wisconsin has redeemed herself and elected a Loyalist United States senator. It appears that the Republican and Loyalist, I. L. Lenroot is elected, but both he and Joseph E. Davies, Democrat and Loyalist are far in the lead over Berger, the Socialist.

Submarining continues, each week witnessing the sinking of a score or more of ships. This week the great liner Celtic, a 20,000 ton ship, was hit and seriously injured, but managed to make harbor.

The Allies have agreed on one officer who shall direct the offensive of the entire western line. The French General Foch has been appointed, and the announcement was scarcely made when General Pershing made pledge of the services of the American boys at any point and in any way that General Foch should command.

How many Huns have been slaughtered in the terrible drive on the Allies will never be known, but it was certainly awful, and some estimate the number at as high as a half a million. The Allies have also suffered great losses, though to no such degree as have the attackers. The "wedge" was driven to within ten miles of Amiens where it was stopped and terrific drives by the French on the south and the English on the north were begun on the flanks of the enemy. It is reported that the Germans are now digging in in the hope of holding the ground won. Yankee troops have been thrown into the fray, but as to the portion of the line being held by them no announcement is made. It is anticipated that terrific counter attacks will be made during the next few days.

# Agricultural News Notes of the Pacific Coast

## Northern California

San Quentin prison jute mill has sold 3,000,000 grain bags.

It is estimated that there are 410 carloads of potatoes in Stockton warehouses.

The Butte County chamber of commerce is planning for a liberty garden contest.

Elorado County's farm bureau is demonstrating the construction of "farm bureau" silos.

The bureau of plant industry is aiding large land owners near Chico in experimental plantings of long staple cotton.

The Yolo County superior court has granted damages above \$9000 to a farms company for injury by seepage from a canal.

A late frost has done serious injury to the almond crop near Yuba City. Some growers estimate the loss at 80 per cent.

The Tehama County Cattlemen's Association is to stage an old time barbecue at the formal opening of the Kauffman causeway.

Next week, April 8-10, the cattlemen of California will meet at Davis for a conference on methods of economical beef production.

The Sacramento Valley Development Association is letting sub-contracts for 5000 acres of castor beans to be raised in the Sacramento Valley.

Sutter County grain producers are still encouraging the erection of grain elevators; three are being planned at Tudor, Marceuse and at Caplett Station.

The municipality of Chico, Butte County, now has title to a 2300 acre park in hills near the city. A deed to a portion of this land was lost and later discovered, to the great relief of the city administration.

Placer County's farm bureau meeting: Monday, April 8, Penryn; 10, Weymar and Colfax; 11, Forest Hill and Butcher Ranch; 12, Lincoln; 15, Gold Hill; 20, Long Valley; 22, Roseville; 23, Sheridan; 24, Colfax; 27, Mt. Vernon. A poultry specialist will attend most of these meetings.

The survey of the lands of the state land settlement colony near Chico is under way and will be completed sometime in April. Price list of the various tracts will be issued from Berkeley about April 20. Over 800 applications for these lands have been filed, only 100 of which can be granted.

## Central California

The pasture on the ranges is the best in years.

A farm bureau center at Ceres has been organized.

Pomona Grange of Tulare County recently met at Poplar.

The San Joaquin Valley Milk Producers' Association recently met at Fresno.

Merced County farm bureau is securing pledges from farmers to raise more pigs.

"A squirrel in time saves killing nine" is the slogan of the San Joaquin Valley squirrel army.

San Joaquin Valley sugar factories have contracted for 7000 acre plantings in Kern County.

Farmers of Stanislaus County held a big rabbit drive on St. Patrick's day; 2000 rabbits were bagged.

The state board of health has declared against the use of sewage in producing garden vegetables and berries.

A \$25,000 packing house under control of the California Peach Growers Inc. will be built at Turlock, Stanislaus County.

Stanislaus County Poultry Association is holding monthly meetings and discussing methods of producing more for less money.

Stanislaus County's squirrel campaign is to start April 29. All the school children of the county are to unite in the campaign.

The Grange Patrons of Husbandry at Aromas, Monterey County, is materially increasing its membership. Its campaign at present is in the selling of war stamps.

Grape growers of Stanislaus County recently met and resolved to resist the Drys in the campaign to put California in line on the national constitutional prohibition amendment.

Growers of cling peaches gathered recently at Hanford and considered cost of production and prices which will be fair to producer. Freestone growers are questioning as to advisability of uniting with cling producers in one large pool. The growers want better than \$25 per ton.

Kern County flocks, aggregating a quarter of a million sheep, will soon be yielding their wool clip which, it is feared because of pasture shortage early in the season, may not be as large as last year's clip. It is now anticipated this year's lambs will sell around \$10 per head.

## Southern California

Dates of the Riverside fair, October 8-12.

Brawley, Imperial County, recently shipped two cars of peas in one day.

Riverside has already shipped for this season about 500 cars of oranges.

Two large canneries at Hemet, Riverside County, are planning for great output.

One 12 acre seedling orange grove at Duarte has made a gross return of \$25,000.

Farmers near Salton Sea in Imperial County report wild geese migrating north.

A local center of the county farm bureau for Antelope Valley recently met at Lancaster.

Riverside County farm centers are giving special attention to the pork increasing campaign.

F. H. Scribner, assistant farm adviser of Los Angeles County, is preaching the gospel of more silos.

Farm Adviser Coit of Los Angeles County is discussing June drop at farm center meetings in the citrus districts.

The extremely short output of Navel oranges is in part compensated for by long prices which have prevailed through the season.

The canning company at Chino has been formally organized, and it is expected that an up-to-date cannery will be in operation for this season's fruit.

Agricultural classes in San Fernando high school, Los Angeles County, are observing tractor school week and doing the practical work of running tractors as part of the lessons.

Imperial County has within the membership of the county farm bureau a woman's organization which will have to do with the forming of canning clubs and the encouraging of any activity which increases home comforts and war efficiency.

Bee keepers of Riverside County are urging the organization of a permanent fire protection. The board of supervisors promise aid, and an effort will be made to appoint eight fire wardens to have charge of the various districts of the county.

An effort is being made by the Ventura County bean producers to secure better conservation of bean straw next threshing season. It has been the custom at threshing time to burn hundreds of tons of bean straw which is valuable for feed and fertilizer.

## The Coast and General

Tucson, Arizona, hopes to be a wheat terminal.

Salt River Valley, Arizona, farmers will plant largely to peanuts.

The reclamation service will open 110,000 acres to sheep pasture in Oregon.

The postoffice department has now made a ruling that live chicks may be sent by parcel post.

The war department has figured out that it will need at least 3,000,000 bushels of castor beans.

Canada plants about 14,000 acres to sugar beets with an average yield of around 8.4 tons per acre.

A great cotton gin and oil mill is to be built at Yuma, Arizona. The mill is to cost about \$50,000.

English walnut men of Yamhill, Oregon, are organizing to further planting and profitable marketing.

Producers of castor beans in Brazil are willing to ship large quantities to this country if the market can be guaranteed.

The Farmers Union warehouse at Palouse, Washington, is planning to increase its elevator capacity to 100,000 bushels.

Portland, Oregon and Spokane, Washington, are pulling for the 1920 convention of the American National Live Stock Association.

Owing to low prices on beans and slow movement New Mexico and other growers of pintos will not plant so extensively as last year.

The grinding of all grain in Italy is now under official control. No owner of a mill may grind his own grain without special permit ticket.

Hay producers of Idaho are being warned that fake war department buyers are securing control of large quantities of hay through misrepresentation.

The federal farm loan bank loaned over \$15,000,000 to farmers during the month of February. Nearly \$1,000,000 of this amount was loaned by the Berkeley institution.

The United States imports from China something over 100,000,000 pounds of tea annually, which is valued at nearly \$20,000,000. It reexports less than 1,000,000 pounds.

Tomato growers the Coast over are making appeal to the United States food administration for relief from the low price of \$15 per ton established by the administration. The growers are asking for \$18.

## The BEE, a Patriotic Worker

The collection of sweets from blossoms and ripened fruits is carried on by the industrious bee without complaining or wages, and why shouldn't he be given all the comforts and conveniences possible? The

### MILLER HIVES

are models of convenience and furnish an ideal comfortable home for the industrious bee. They are made of clear, straight grained Redwood or Cedar. Cedar hives prevent moth infesting the bees the same as Cedar chests prevent moth in clothes. The honey frames are made from fragrant white pine, accurate and smooth.

## This Month in the Ornamental Garden Northern California

Written for California Cultivator by A. R. Gould

WING to the extensive rains there is now much to do in holding the weeds in check, and the lawns need weekly attention.

### Sunflower

These are popular flowers, the new red type being a novelty and seen in quite a few gardens, but the most striking of the more modern types is miniature grandiflora. This grows to a height of two to three feet, branching freely and is covered with small yellow flowers with a dark centre. It makes a fine solid effect and is also useful as a cut flower. Stella is a similar form but a very pale yellow. Seeds of this miniature type should be sown now on a very warm border and later planted out to flower two and one-half feet apart each way.

### Lobelia and Ageratum

These are largely used for edging. Sow the seeds at once in boxes of fine sandy soil, placed in a warm situation, and as soon as the seedlings are large enough they may be transplanted to larger boxes three inches apart. Plants of these may often be purchased.

### Antirrhinums, or Snapdragons

These may now be secured in many different shades and are always popular. They have a bad habit of getting the rust, which is very hard to control, although many cures are recommended. However the disease is generally worst towards the end of the flowering season, so that it does not affect the display very much and young plants are so quickly and easily raised that a succession is not difficult to maintain. Seeds of the following varieties should be sown now in a warm seed border: Golden Morn, Amber Queen, Fiery Cross, Mauve Beauty, Fascination and The Fawn.

### Dahlias

It will be necessary to prepare the ground for these by trenching deeply with manure. Towards the end of the month the tubers may be planted. If you managed to save some seed or secure some from choice varieties it will be an easy matter to raise plants which will flower this year if you sow the seed in a box in a warm situation and later transplant in a box three inches apart. When they are 12 to 18 inches high they may be planted in the open ground.

### Asters

You should not delay in sowing the seed of these in a warm border. The following are very fine varieties: Comet Branching, lavender; Crego's Giant, rose pink, white and purple; Mammoth, white, lavender, purple and shell pink; Red Sensation.

### Nemesia and Linaria

These are little known annuals but very pretty and may be sown in a well prepared border where they are to flower. N. Strumosa and Blue Gem are both fine Nemesias, and Linaria Excelsior hybrids are very choice. They should later be thinned out to four inches apart.

### Pansy

Those which were in flower early will be now making an excellent display, but to keep them on at their best for several more months work in some quick acting fertilizer as a

top dressing. Collect all the seed possible.

### Perennials

The perennial border should ere this have been dug through and any replanting completed as soon as possible. All large clumps of hardy aster, Shasta daisy, etc., should have been divided and the border renovated.

### Castor Oil Plant

This is sometimes grown as an ornamental plant, both the green and red leaved variety, but now it appears to be also in great demand to provide oil for the Liberty motor for aeroplanes. Seeds if sown at once will provide plants for putting out towards the end of the month. Sow two or three seeds in small pots and place in a warm sunny position. Plant later from three to four feet apart each way.

### THE BRILLIANT FIRETHORNS

There are three species and several varieties of shrubs known as pyracanthas, but also called cotoneasters, or crataegus, being closely related to both. They are quite hardy in cold locations, half evergreen. The flowers are white and fragrant, borne in great profusion, followed by an equally abundant crop of red or orange-red

berries which remain on the plants throughout the winter, being ideal for Christmas decorations. They prefer sunny situations, thrive on rocky slopes and luxuriate in rich garden loam but are intolerant of wet feet. They are still rare in California but sure to gain rapidly in popularity as they are easily grown, require no care and are both attractive and useful to an unusual degree in a great variety of situations.

## This Month in the Vegetable Garden Southern California

Written for California Cultivator By D. F. Reichard

**N**ATURE has certainly favored us this season. Conditions are such that anyone who has a piece of ground and does not make a garden or grow some kind of a crop on it will feel very embarrassed at the end of the season. There was a long dry period in early winter to give all the opportunity to clean up the ground or to spread fertilizers. Rains have thoroughly soaked the ground. The temperature has been in general very mild so that the invitation to work the soil has been strong. Besides these natural incentives we have the human demands which call on us most earnestly, to which we should faithfully respond or be classed as slackers.

It is our patriotic duty as well as our privilege to make this April the biggest planting month ever. There has been time since the rains to have put the land in perfect condition. If this has not been done do so at once by spading or plowing ten to twelve inches deep and thoroughly harrowing or raking to break up all clods and to make a mulch as well as settle the soil. This is the first essential to a successful garden.

Prepare the ground where small seeds are to be planted especially well so that the earth particles will be small enough to snugly fit about the seeds and thereby hold the moisture near it. Moisture, air to a limited degree, and warmth are the essentials for proper germination. Moisture and air are available any time by proper cultivation of the land, while the warmth is best attained in the open or outside ground after the Equinox, which makes the last of March and all of April the best planting weeks of the year.

Often by seeding time the fine mulch has dried down an inch or more. This should be scraped aside and then the seeds are planted in the moist soil one to three inches deep according to their size, the larger seeds being planted to the greater depth. Cover the seed with the moist earth and settle it gently. The dry mulch can be put back as it will not retard the growth of the young plant and will still act as a mulch.

During April most everything can be planted with assurance of rapid healthy growth. Plant beans, corn, cucumbers, melons, okra and squash in variety. For succession, beets, carrots, Cannon Ball or Scott's Cross cabbage, chard, endive, Iceberg lettuce, bunching onion, parsley, parsnips, radishes, salsify, summer spinach and small quantities of turnips may be planted.

Set out plants of Earliana and Stone tomatoes, peppers in variety, egg plants, sweet potatoes, and celery plants. Every garden should have some of the herbs, chives and rosemary. This last item makes a most delicious jelly.

It is getting a little late for planting potatoes and also peas except in particularly well suited places.

Keep hard after the weeds as they make a strong attack at this time. The same can be said of insects and fungi which the warm mild weather develops to full strength. Keep supplies of tobacco extract, sulphur, lime

rosin wash or lime-sulphur and Bordeaux mixture and a good spray pump on hand for immediate use.

### Northern California

Written for California Cultivator By A. R. Gould

**W**E FIND this one of the busiest months of the year. This is the month when we can play safe with tomatoes, beans, peppers, melons, squash, corn, cucumbers and such like tender stuff. Many of our other earlier crops will be nearing maturity, especially peas. In many of the sections where they expect to make lots

of money they will have marketed some ere this. The pea crops both sides of the Bay this year were in fine condition. There were very extensive plantings between San Leandro and Niles on the hillsides where are picked most of the early peas. Some of the smaller seeds, such as lettuce, carrot, onion, etc., have been rather slow in germinating owing to the cold, but they appear to be moving now and will soon need all the care and cultivation we can give them. Throughout the month the weeds should be kept down as, apart from looking unsightly, they rob the soil, and the planted crops will suffer. Turnips, carrots and lettuce sown previously will require thinning and very frequent use of the hoe or cultivator.

The school garden leader might do worse than follow the notes closely in the Cultivator as they will prove of

great assistance, and we shall be only too glad to help out with any particular garden problem.

#### Potatoes

The early varieties will soon be showing through, and when they are two or three inches high they should be cultivated between the rows, and the soil should be drawn up towards the plant to form ridges. Planting may still be carried on this month of the main crop varieties.

#### Peas

Continue to cultivate between the rows of this crop and watch out for aphids or green fly. If troubled with this pest spray with Blackleaf 40, a nicotine solution. This is also an opportune moment for making a successional sowing of Little Marvel, as the late rains will no doubt come to our aid, and the variety mentioned is very prolific. You can keep peas in

# PAIGE

*The Most Beautiful Car in America*

## Time Is Money

How much time do you waste in "hitching up" when you drive to town in the buggy? How long does it take you to get there—and back? What is your time actually worth in dollars and cents?

If you answer these questions correctly, you are bound to arrive at two very startling conclusions. First, you can't afford to get along without a motor car. Second, you are paying for a car now—whether you own it or not.

Time, please remember, is money. A productive hour is worth just so many bushels of wheat, so many barrels of flour, so many loaves of

bread. A wasted hour is worth precisely nothing.

Because this is true, you can't afford to use your horses for a task that the motor car will perform ten times more efficiently.

Because this is true, you can't afford to lose the profits that would pay for a car—and show a handsome surplus to boot.

You actually need a car; there can be no question about that. But you also need a good car—a reliable car—a comfortable car.

In the opinion of ourselves and more than 50,000 satisfied owners, you need just such a car as the Paige.

PAIGE-DETROIT MOTOR CAR COMPANY, 242 McKINSTRY AVENUE, DETROIT

**profit by state hay shortage**

**\$40 alfalfa hay coming**

The feed situation in California is critical. Hay is so scarce and the price so high that stockmen cannot afford to buy it. The rains came too late to afford substantial relief. What will hay prices be this fall and during 1918?

Oat and barley hay are now \$36 to \$38 a ton. Alfalfa hay is now quoted at \$32 a ton baled in carload lots, and authorities claim it will soon go to \$40 and perhaps higher. Farmers who plant alfalfa now will harvest a crop of gold. Take no chances with inferior seed—plant Germain's Selected Alfalfa Seed—and if you want 2½ more tons to the acre—plant Germain's Hairy Peruvian Alfalfa.

#### HEREFORD SALE AT DAVIS

Continued from Page 423

The quality of the bulls that will be sold at Davis on April 10 will demonstrate just what can be expected of the right sort of blood.

#### THE SHORTHORN SALE

Written for California Cultivator

**E**LEVEN consignors are entering 32 head of cows and heifers and 34 bulls in the Shorthorn sale to be held in San Francisco on Thursday, April 11, 1918.

The largest consignment is that of W. M. Carruthers of Mayfield Farms. Among the animals is Mayflower, sired by a grandson of Whitehall Sultan; Mayflower's granddam being the Bruce-bred imported Marion. This heifer was first prize senior yearling at the San Francisco Land and Livestock Show last year. Another outstanding heifer is Barco Duchess, sired by Wallhurst Goods, and out of Duchess Hurst. This heifer was grand champion female at the 1916 state fair, as senior heifer calf.

The Ormondale Company, of Redwood City, is putting in three well bred young bulls, also nine beautifully smooth heifers.

Henry Elberg of Woodland has some choice young bulls entered, sired by Ring Leader, son of Ring Master, also a four year old cow, Wide-awake, and two cows sired by Gibson's Goods.

Another consignor is William Bond of Newark who is putting in two heifers and four bulls, all of True Dale breeding, being sired by his herd bull, Pacheco Lad 46th, out of cows some of which are strong in Cruickshank blood.

The Paicines Ranch is consigning four bulls bred on Mr. Macomber's Kentucky ranch, two sired by Fayette Marshall, the by King Cumberland, and out of a Cumberland cow; one by Pine Grove King, and the fourth by Fayette Aberdeen, out of a Cumberland cow.

Avondale, Blood shows up strongly in the entries of the Pacheco Cattle Company, which firm is entering three bulls and three heifers. The blood of King Edward, Choice Goods and Avondale represented therein is well worth attention.

T. S. Glide of Davis has a treat in store for the discriminating bull buyer, as instanced by his entry of Village Type, sired by the famous bull, Cumberland's Type, out of the Hannabred Village Myrtle, by a son of Villager. Three Knight Perfection bulls are also offered.

The Jack London ranch has put in this sale the cow Roan Lady, sired by Emperor's Pride, out of Red Lady by King Banff. Roan Lady has a calf at foot. London's Aloha, another entry, is a coming two year old heifer, sired by Roselawn Chief 81st.

Two cows, one heifer and a bull are the contribution of the Hopland Stock Farm, owned by A. W. Foster. All four are sired by the Choice Goods bull, Right Choice.

The Misses Alexander & Kellogg, of Grizzly Island are consigning the bull Shasta, a white bull sired by Glenside Royal and out of Glenside Fern. His granddam, Margaretta Clay, had a record of 10,143 pounds. Glenside Royal was grand champion milking Shorthorn bull at the Exposition in 1915 and at the state fair in 1916, and reserve champion at the state fair in 1917, while Glenside Fern was first in the three year old class at the state fair in 1916.

The University of California enters Belle of Wayside, with calf at foot sired by Sultan Mayflower; also California Belle, a yearling heifer, out of Belle of Wayside. The opportunity is afforded therefore of observing in one ring two of the get of Sultan Mayflower and the dam which produced them.

#### COOPERATIVE BULL ASSOCIATIONS

**T**HERE is a lack of definite purpose in the breeding of livestock on the part of the American farmer. The farmer who has only a few cows usually has them bred by the nearest available bull, often without regard to breed or breeding. The result is a promiscuous admixture of breeds and lack of improvement.

The cost of bull service also falls heavily on the commercial dairyman with a small herd as bulls must be changed every two or three years to avoid inbreeding. He therefore, as a rule, buys a bull calf from the nearest farmer who keeps purebred cows of the breed in which he is interested. Too often cost is the first consideration. Too seldom is any authentic production record of the bull's ancestors available. The result is lack of improvement. Though a great bull may occasionally be secured in this way he will in nearly every case have been disposed of before his heifers come in milk and his value has been determined. In this way many of the greatest bulls have been lost to the dairy industry. A cooperative bull association will remedy these difficulties.

A cooperative bull association is a farmers' organization whose purpose is the joint ownership, use and exchange of three or more high-class purebred bulls. The territory covered by an association is divided into three or more breeding blocks, and a bull is stationed in each block for the service of the 50 to 60 cows in the block. Every two years the bulls are interchanged. Thus at the initial cost, a bull for every 60 cows is provided for six or more years. The cost of bull service is thus greatly reduced, the very best bulls can be obtained, and the man with limited means and only a few cows is enabled to improve his herd. Bulls of outstanding merit are preserved for their entire period of usefulness. Associations of this kind teach cooperation, encourage careful selection of cows and calves, introduce better methods of feeding and management, intelligently fight infectious disease in cattle, and assist in the marketing of dairy stock and dairy products. Assistance in organization may be obtained by writing to Dairy Division, Bureau of Animal Industry, U. S. Department of Agriculture, Washington, D. C.

#### STATE DAIRY COMPETITION

Upon observation of the records made, many interesting facts were brought to light. For instance, the best grade cow produced 762 pounds of butterfat, contained in over 20,000 pounds of milk, during the ten months' test. More than 40 grade cows produced over 500 pounds of butterfat each in the ten months. The high production of these grades is probably traceable to the continued breeding of pure bred sires in the herds. If the dairy cow competition did not accomplish anything else than to bring to the dairy farmers the value of pure bred sires for improving milk production of grade cows, it will have more than justified the labor spent on it by those in charge.—W. J.

## Cause of Bitter Milk

I would like to give my experience with my young cow that gave bitter milk last winter. I thought we did not wash the bucket and pans clean enough, so we took extra pains in washing them, but that did not help out any. I knew that if we boiled the milk we could make good butter, but I was not satisfied with that. I wanted to know the cause of it. I did not stop my observation until I found out; and I found out the cause of it all. Because my cow wanted to stay outside and take the cold winter at nights I just let her stay out. Now that was one cause, and the other cause is salt. I knew well enough that my cow ought to have salt, but I just neglected it and she got poor and consequently we got bitter milk. Then I put her in the stable at night and

gave her plenty of salt. She then got fat and we got good sweet milk and good butter.

Now this winter I had the same trouble again on account of leaving my cows out at night and not giving them enough salt. My young cow started to give bitter milk and my old cow gave pink milk; the butter would be strong, the buttermilk had a red-dish cast to it and we could not use it. Then I thought, "Here I am feeding expensive hay and not giving my cows the proper care," so now they go into the stable every night, and we see that they get plenty of salt.

Now this is practical experience with me. I am not afraid of the waste basket, for I feel that the California Cultivator is a good friend to all of us farmers.—Mrs. E. C. Dailey, Kingsburg.

## Farrowing Time

Do not confine the sow in her farrowing pen more than 48 hours before farrowing time if it is possible to avoid doing so. Reduce the heavy feed to some extent, probably about half, for that length of time. The farrowing house or pen should be comfortably warm, well ventilated, and well lighted. Above all else it should be well bedded. Do not allow any circulation of air under the floor. Too many hog raisers make the mistake of bedding too lightly. Heavy bedding naturally makes the sow comfortable and warm—conditions necessary if she is to be quiet.

Under no circumstances should the sow have any feed whatever for 24 hours after farrowing. She must, however have plenty of water at frequent intervals. This water must not be icy cold—that drawn directly from the well is about the right temperature. Commence after 24 hours feeding lightly, increasing the feed gradually for probably a week or ten days, when she may be gotten onto full feed, conditioned on the size of the litter and the milking qualities of the sow.

### Look Over Pigs Before Each Feeding

A good herdsman, for the first week at least after farrowing, will look the pigs over carefully before each feeding. If any indications of scours ap-

pear, the sow's feed should be reduced immediately or possibly cut out entirely. A heavy feed of rich slop given when scours begin to show up possibly may kill the entire litter. A little extra care for these few days is absolutely necessary.

When the pigs are from four or five to ten days old, be on the lookout for thumps. The best looking fat little pig is the one to go first every time. An almost certain indication is a little roll of fat around the neck. While there is no known cure for thumps, the trouble is quite easily prevented. Plenty of exercise for the pigs is the answer. In cold stormy weather out-of-door exercise is impossible, but if a central farrowing house with an alleyway is used, get the little fat fellows into the alley and put in about ten or 15 minutes three or four times a day chasing them with a buggy whip until they are pretty well tired out. If this is impossible try putting one or two of the little pigs at a time in a large barrel or hogshead, placed by the farrowing pen. The pigs will hear the old sow making a fuss, and in running around the barrel hunting for a corner to climb out, generally will take the exercise necessary to ward off thumps. A considerable part of the battle is won if the litter gets past the first ten days or so with a good start.

## "This Little Pig Went to Market."

Written for California Cultivator By C. A. Briggs

THIS is a story of the possibilities in the hog breeding industry and shows what may be accomplished with a good animal in capable hands. It is not believed that similar results can be obtained by careless breeders with poor stock. Facts, figures and names of purchasers are at hand to prove every statement and show that "this little pig" went to market to good purpose. This is the story:

The sow, Ora Price, a Poland-China owned by W. A. Young and J. A. Clark of Lodi, was first sold by W. A. Young as a suckling pig for \$12.50. Later Mr. Young saw the pig and bought her back for \$25. He did this because he thought she was a sow of promise but that she was not being properly cared for. Under his care she has developed into a splendid breeder. Her first litter, in the fall, of nine pigs, four boars and five sows, sold as follows: three for \$30 each,

two for \$35 each, two for \$40 each. Two were kept by Mr. Young after he had refused an offer of \$50 each. Counting these last as sold to Mr. Young the first litter brought in a total of \$340. Her second litter in the spring was seven sows. Of these one, Lady A Model, sold for \$175; one, Model Price, for \$200 to a Stockton breeder who also offered \$500 for two others of the litter which were first and second in class under year, and one of which was the reserve champion at Sacramento last year. Three of the litter were sold at Sacramento as under six months pigs for a total of \$235. Counting the two which Mr. Young refused to sell for \$500 as sold to his own herd at that price, this litter of seven has brought a total of \$1110. The total income from the two litters in one year is \$1450 from a \$25 sow. Added to this, the Stockton breeder referred to has made a standing offer for her of \$200. This story shows that breeding and feed-

# Cutter's

Germ Free

## Blackleg Filtrate

and

## Blackleg Tissue Aggressin

**The New, Safe and Efficient Agents for Protecting Calves from Blackleg.**

Cutter's Blackleg Filtrate positively protects against Blackleg.

Cutter's Blackleg Aggressin, made directly from animal tissues, affords even greater protection and is recommended for Pure Breeds.

Neither the Filtrate nor the Aggressin can possibly produce Blackleg in even the most susceptible animals since both are germ free.

Both have given 100% protection wherever used.

Prices—	
10 dose pkge. Filtrate....	\$2.00
50 " " " " " " " "	8.00
100 " " " " " " " "	15.00
10 dose pkge. Tissue Ag-	
gressin .....	4.00

N. B.—Cutter's Filtrate (a "cultural product" aggressin) is full 5 c.c. to the dose, as we believe that smaller doses, whether concentrated or not, afford less protection.

Write for booklet telling what germ free vaccines are and wherein "cultural product" Aggressins differ from Cutter's Aggressin made from animal tissues.

While these new "germ free vaccines" have advantages that should be known to every stockraiser, we see no reason for a quick change to them by stockraisers who have had satisfactory results from the use of

## CUTTER'S BLACKLEG PILLS

ing both count, for W. A. Young is one of the best feeders in the state and Ora Price is a well bred sow.

### NEW ARRIVALS

Written for California Cultivator  
By C. A. Briggs

On March first Clayton N. Slocum of H. P. Slocum & Son of Willows arrived from the East with a carload of Duroc-Jersey hogs. They were purchased for their own and other herds of California breeders, are among the finest specimens ever brought into the state and were selected from the holdings of the best Eastern breeders in Iowa, Illinois, Nebraska and Missouri. Animals of best blood lines and finest individuality were secured from the herds of J. D. Waltemeyer & Sons of Melbourne, Iowa; Van Patten & Son, Sutton, Nebraska; Robert Leisy, Wisner, Nebraska; O. S. Larson, Logan, Iowa; McAndrews & Sons, Vail, Iowa; Lot Bros., Fairmont, Nebraska; J. Patterson, Red Oak, Iowa; E. Bates, Oakland, Iowa. For their own herd Mr. Slocum selected Uneeda King the Col., a fall boar of great quality. His sire, King the Col., is known to all lovers of the breed. Two years ago 35 sows of his breed were so good that they sold for an average of \$140. A year ago last fall the junior champion at the Omaha National Swine Show, Algo's Giant, was sired by a sow of King the Col. Col. Gano, another of his sons, was also a sire of many winners. The first prize senior yearling boar at the 1916 International was sired by a son of King the Col., so that the new arrival, Uneeda King the Col., out of King the Col., out of King of Cols., out of Prince of Cols., is the kind of hog we all want here. As an individual he is fine; he has great stretch, a high arched back, extra good bone and feet and will surely catch the judge's eye in the show ring. Best of all he will without doubt do much in the state's campaign for "more and better hogs." Besides this leader in boars Mr. Slocum has several sows of quality that add to the strength of his herd very materially.

### Book Review

#### SWINE MANAGEMENT

"Swine" by William Dietrich, published by Sanders Publishing Co., Chicago, \$1.50.

The discussions here given are the results of a number of years of specialized study in swine husbandry in connection with a thorough study of the principles of animal nutrition. Practical farm experience was supplemented by a detailed study of experimental data and a great deal of original investigation in the subject. An attempt is made to present the subject of swine breeding, feeding and management in such a form that it can be understood by the general farmer and swine breeder; the man who is producing hogs for the pork product as well as the man who is producing purebred swine for breeding purposes. The student also is kept in mind, and it is hoped that the elementary form in which this subject is presented will appeal to the needs of the classroom.

The book consists of 312 pages of hog information, which makes it a classic of swine literature. There are 23 chapters divided into three parts. The first, Swine Breeding, with nine chapters which treat fully selection, size, prolificacy, and quality, breeds, characteristics, judging, origin of breeds, their development, etc. The second part has to do with feeding, to which five chapters give fullest de-

## ABORTION IN CATTLE

PREVENTED AND CURED PERMANENTLY  
YOUR COWS MADE PROMPT. REGULAR BREEDERS BY

## STERILOID

### STOP LOSING CALVES

**TREATMENT:** If STERILOID is used at the first sign of abortion, the cow will go her full time and have a healthy calf. If your cows or heifers do not come in season, or fail to get with calf, use STERILOID. Cows get with calf after only one treatment. Write today for FREE BOOK. It explains the causes and symptoms of Abortion and tells how to cure Abortion, and make your cows regular, healthy breeders with STERILOID. Also contains letters from breeders who have used STERILOID successfully.

**GUARANTEE:** We will refund money in every case when STERILOID FAILS to make good. Price \$1.00. Mail postpaid. In plain wrapper.

scription. Part three takes the remainder of the book and has to do with management, and discusses the breeding season, farrowing, weaning, shelter, tuberculosis, and other diseases. It ends with a good strong chapter on marketing.

## THE SAN FRANCISCO SWINE BREEDERS' MEETING

Written for California Cultivator  
By R. P. Royce

BECAUSE of the growing dissatisfaction among pork producers in this state over the present outlook for the business, committees from the different swine associations met at the Palace Hotel, San Francisco, March 6, for the purpose of discussing plans making for more satisfactory conditions.

The meeting was enthusiastic throughout, and from the discussions it appeared that if the business of pork production is to be increased several factors now affecting the industry must be corrected. The more important of these factors are:

(a) Cheaper feed, (b) better markets, (c) more efficient methods of marketing, (d) better methods of feeding, (e) better hogs.

It is obvious that some of the above factors depend on conditions that are beyond control. For instance, the question of cheaper feed is dependent on many conditions that cannot be accurately forecasted. In this connection, however, it appears that already the meeting has accomplished some changes that will result in cheaper feed. It will be recalled that some time ago prices for wheat by-products were fixed on the basis of 38 per cent of the cost of the wheat. The by-products affected were bran, shorts, middlings, etc. It later developed that when inquiry was made in reference to the purchase of any of the above by-products, that the millers would state that none of these feeds were available, but offered various mixed proprietary feeds at prices considerably above the price of "straight" mill feeds. When these facts were brought before the meeting, a resolution was passed and forwarded to the food commissioner for California calling his attention to the facts and urging that an investigation be made as to why millers had plenty of proprietary feeds but no straight mill feeds. Announcement has just been made that millers will not be allowed to manufacture and sell in any one month an amount of proprietary wheat by-product feeds in excess of the average amount manufactured and sold in any three months of 1917. No greater profits will be allowed in the sale of the proprietary feeds than that taken on the sale of straight mill feeds.

It is becoming more and more apparent that greater quantities of the coarser grains will be used as wheat substitutes for human consumption, and it is possible that this wide use will operate to further restrict their use in pork production.

It appears that pork producers must depend, to a greater extent than ever, on dairy by-products, stubble, city, household, and orchard waste. There is a vast quantity of such waste that is not now being utilized, and the problem is to work out some satisfactory system for efficient utilization of such waste. In this connection it may be suggested that it will be largely an individual problem and that the nation's needs will prove a sufficient stimulant for every man to make use of what waste he can.

As regards better markets, it can hardly be expected that Pacific Coast prices will be permitted to reach a much higher level than Chicago or Missouri River markets. It is possible, however, that a level may be reached equal to Chicago prices plus the freight and efforts will be made to secure such a basis.

The question of more efficient methods of marketing is one that permits of considerable improvement, and efforts may be directed along several different lines. It is generally conceded that the local buyer presents the biggest problem to solve. The average local buyer who depends on handling the fat stuff from small producers has for years been exacting a piratical margin between terminal quotations and the price he pays, and the heavy tribute he has exacted has

been such that many small producers have become discouraged. Some means must be worked out that will eliminate these profiteers. They serve little or no useful function, and because the average country buyer has not played fair, a community should not hesitate to eliminate him.

One of the most practical plans for handling the problem of the small producer is a plan for cooperative marketing. Such a plan was first inaugurated in this state by the farm adviser of Kern County, and it was so successful that other counties have taken up the idea. Briefly, the plan amounts to this: cooperative shipping organizations are organized by the farm adviser through the farm bureau organization. At stated times the members assemble their hogs or cattle at a central point. The stock is then graded by a committee. Buyers representing a number of packers are advised beforehand as to the date, number and kind of stock to be sold and are invited to be present to bid on the offering. This plan has invariably resulted in the members securing a wide margin over the price offered by local buyers. The small expense is prorated among the consignors. So enthusiastic were those attending the meeting who were familiar with the plan that it was decided that every encouragement be given the organization of similar associations throughout the state. It is proposed to start an active campaign along this line, and every member present pledged his wholehearted support. Plans as to the most effective way of interesting farmers throughout the state were discussed, and it was decided that another meeting be held in San Francisco at the Palace Hotel April 12, at which time every effort be made to have representatives of every swine association and every farm bureau present, for the purpose of working out a satisfactory plan. An invitation is also extended every hog raiser in the state to be present at the annual meeting of California Swine Breeders' Association to be held at the University Farm early in May.

This plan of cooperative marketing has such splendid possibilities that it should go a long way towards correcting many of our market evils.

The question of stockyards for California markets was also discussed and the meeting went on record as favoring the establishment of yards. The feeling was freely expressed that it was only a question of time until the live stock producers of California have the advantage of stockyard selling, and that efforts should be directed toward the shortening of the time.

A phase of the marketing situation that has hitherto received little attention is the practice of weighing hogs, cattle and sheep "empty." On the Middle West and Eastern markets live stock are given a "fill" before weighing to the packer. This fill of water and feed very largely makes up for the shrinkage occasioned by shipping. So far, only a few California shippers have been given the advantage of a fill. It is stated that shippers in the Imperial Valley are paid on the basis of home weights, and a number of the smaller concerns are buying "full" hogs. While it is true that buyers on Eastern markets do not overlook the question of fill in making their bids, and buying accordingly, there is nothing to indicate that the majority of California packers recognize the lack of fill. Consequently when this method of

buying is considered, it is evident that California packers are really getting.

plant in different sections consult the chart published on March 16, always remembering that commercial Limas require coastal fogs to properly develop.

## Bean Growing Points

Pungent and Direct Answers to Bean Growing Questions by H. L. Musser

IT IS always easy to ask questions, and comparatively easy for a man posted on his subject to answer, provided the questions are asked with intelligence. One of the commonest questions which comes to the office of a farm paper is: "How can I raise beans or alfalfa or some other crop calling for wide knowledge." Such questions cannot be answered in any paper with limitations of space with any degree of helpfulness. We recently put a series of such questions as to beans up to H. L. Musser, one who has wide general knowledge of the production of all small farm and truck crops. Mr. Musser called attention to these limitations, but so far as he could in short space he has answered the following questions:

Should the ground be plowed in the fall? Yes. How deep? From six to eight inches and rolled with a disk harrow for sub-surface packing.

What condition should the field be left in for the winter; that is, smoothed down or rough? Smooth.

Manner of winter handling of soil: Clean culture. Go over with a spike-

The amount of seed required varies according to the different sized beans. Teparies and Small Whites take about 20 pounds; Blackeyes, Pinks, Large Whites, 30 pounds; large Limas and Horse beans, 40 to 50 pounds.

tooth harrow after each rain. A complete covering of rye, or any cover crop, would be beneficial, but to allow a plowed and harrowed field to lie uncultivated long enough after a rain to permit weeds to irregularly cover, the ground would cause it to become dry and crusted before that time; therefore, harrow after each rain.

Soils: Cultivation may be the same depth for all varieties; six inches the first time, but not more than two or three after that.

What soils are best adapted to Limas, Blackeyes, Pinks, Whites and Teparies? If soil has humus or is otherwise rich the nature of the soil makes little difference with beans. Beans and onions are not particular about the nature of the soil, as is cabbage and melons.

How far may Limas be grown in-

land? Is 20 miles from the coast the limit? With irrigation may the line be extended farther in? Is irrigation profitable? Irrigation is profitable. Limas may be grown farther inland on black soil. The heat of the sun refracted from light sandy soils is detrimental.

There are so many so-called varieties or strains of Limas; which is best? Some varieties snap or pop open in the field; the waste is great; is there any help for this? That is, in the matter of handling or in the matter of choosing varieties? Beans which snap readily should be handled early in the day while yet moist from the dew.

Can weevil be avoided by planting earlier or later? What is the best season? In treating seed is anything better than bisulphide of carbon? How much of this do you use per hundred cubic feet? Have you ever noticed injurious effects on the germination? It is claimed that the weevil attack only the early planting; June planting seems to escape. This is not absolute, as we have known weevil to appear in late plantings. Weevil does not attack the Lima bean. Carbon bisulphide is the only thing we know of which will effectually kill the larva of the weevil without injury to the seed germ. Apply one ounce to one cubic yard in air-tight containers and leave over night. Keep away from fire; it is more explosive than gasoline.

## Soy Beans on Farms in the Southwest

SOY beans are quite similar to cowpeas, though they differ in several distinctive features. The soy bean plant is upright, the stems hairy, the

leaves dense but different from the leaves of cowpeas. The pods of the soy bean are short, thick and hairy and the beans quite hard but rich in oil and protein.

Soy beans stand more cold weather than cowpeas, but should not be planted till frost danger is over. The area for growing soy beans in the North coincides with the corn belt. In the South both the cowpea and the soy bean may be grown on most of the thin sandy loam soils, but it is a fact well known that soy beans require richer land than peas.

According to reports Japan, China and Manchuria produce more soy beans than other countries of the world. In these oriental countries the beans are eaten and the oil is a very important article of commerce. Many varieties are grown in the far East, among them some especially desirable for oil.

Although this crop has not been very extensively grown in this country we have a number of varieties, most of them recently introduced. There are but a few very reliable varieties as most of the later introductions have been so far rather disappointing. The Mammoth Yellow is one of the best varieties; it grows tall, yields both hay and beans heavily under reasonable conditions, and it has been popular among farmers in this country.

Soy beans are not regarded as highly to plant as a companion crop with corn nor for a catch crop after oats or wheat as cowpeas. But as a hay crop or for seed when planted alone at the proper time heavier yields have been obtained on soy beans than cowpeas.

The crop is planted in drills or rows much like planting peas. Broadcast sowing has not generally given satisfaction in the South. In the corn belt broadcast sowing has been practiced with good results. The rows for this crop are usually three of 3½ feet apart and plants left from six to eight inches apart or ten to 12 inches, depending upon the variety and the soil. The seed may be planted with planters, as most of them have plates for soy beans.

Cultivation is done as early as possible to keep down weeds and give the plants a favorable start. The first cultivation may be given with a harrow or weeder or with the cultivator using sweeps. The plants are quite tender and should be cultivated carefully.

The worst enemies to soy beans are rabbits. They seem to have a special fondness for the young plants and where the animals are very numerous may play havoc with the plants.

In giving his experience in growing soy beans for Harry D. Wilson, commissioner of agriculture, S. E. Hostetter of Louisiana says:

"When ground is cleared of the vegetable crop we immediately flat-break, and thoroughly harrow and drag the fresh plowed ground in order to obtain a good mechanical condition of the soil, and then wait, if necessary, for the proper amount of moisture. Land that was cropped during the winter and spring months, and then broken in May, dries out very quickly. In our latitude we can plant the Mammoth Yellow soy bean any time from the first of June to the 15th of July (or earlier if you wish) and mature a good crop of seed before frost. We drill in rows three feet wide, one-half to three-quarters bushel per acre, covered not more than one inch deep, on a slightly raised bed. (This to afford drainage, in case of excessive rains before the beans are well up.) As soon as the plants appear we start cultivation with a 14-tooth harrow, and, if it is desirable to cultivate flat, no other implement is necessary. We lay by with a wide sweep run very shallow, this to afford drainage and give better support to the plant, on account of its heavy load of fruit and foliage.

"Soy beans grow in a bunch, or bush, 2½ to four feet high. To harvest for hay they may be cut with a mowing machine, when the beans have formed in the pod, and are about half grown. Then handle same as cowpeas for hay. To harvest for seed they should stand until the pods on

the upper half of the plant turn yellow, the lower half still being green, and may be cut to advantage with a self-rake reaper, if you wish to save the beans from shattering.

"We cut with a mowing machine and bunch with a rake, same as we do with cowpeas for hay. However, this wastes about five per cent of the seed, unless you follow with hogs. Rains do not injure the quality of soy beans while curing in the cock as much as cowpeas. The hay crop, as frequently advised by agricultural writers, can be used to advantage with this crop.

"When the beans are sufficiently cured we immediately draw them to the thrashing machine. We use a regular grain thresher, but reduce the speed of the cylinder to just one-half the speed used to thrash oats. The speed of the separator should not be changed.

"The yield of soy beans compares very favorably with corn. Where corn makes from 25 to 50 bushels per acre soy beans should make from 20 to 40 bushels of seed, and one to two tons of hay. However, 25 bushels of seed per acre is a very good crop.

"At the Tennessee experiment station an acre of corn fed two steers 54 days and made 203 pounds of beef.

"An acre of cowpeas fed two steers 54 days and made 327 pounds of beef.

"An acre of soy beans fed two steers 80 days and made 540 pounds of beef.

"Corn and soy beans fed in the right proportion will make a balanced ration for practically all farm stock. Every experiment station in the Southern states has spoken highly in favor of the soy bean."

#### DRY LAND PINTOS

By Robert H. Moulton in Farm and Ranch

**I**N view of the present world crisis in food supplies, the growing of beans as a field crop affords one important means of helping to meet the situation. They are one of the best substitutes for meat on account of their high protein content. Strangely enough, too, the exigencies of the war have brought into prominence a comparatively obscure type of bean—pintos, dry land grown. According to reliable figures, Colorado had 35,000 acres of pintos in 1916. In 1917 she harvested 175,000 acres, an increase of 500 per cent. New Mexico, long the home of the pinto bean, had 300,000 acres in 1917, an increase of about 600 per cent over the preceding year, while Western Kansas, Nebraska and Wyoming together cultivated some 25,000 acres of what was practically a new crop for these states.

Early threshing returns in the Southwest this season indicated a yield in the neighborhood of 40 pounds per acre, on dry land, or a total of approximately 200,000,000 pounds in the six states referred to. A careful survey of production along the Burlington line in this section shows that fully 3000 carloads will be shipped to market. That this enormous production will be utilized is certain, since the pinto has been officially recognized by the war and navy departments. In fact, it has been placed on an equal basis with the Navy and California Pink beans for army use. Only a few weeks ago the food commission placed an order for 720,000 pounds of Colorado pintos at 7½ cents per pound. This is a good start, but compared with other food products they are cheap at this figure.

In the past the pinto has been unjustly discriminated against. Its origin is obscure, and its name has been against it, the word pinto meaning "spotted." Because of its color and markings it has always sold on the market at a less price than white beans. Yet its type is as well fixed as the navy bean, and it breeds true to type. When baked the spots vanish

and the bean turns a beautiful brown, while in nutriment, flavor and palatableness it is without a superior. The trouble would seem to be that all kinds of nondescript beans—yellow, red, brown, black, pink—have been sold as pintos, and the majority of people do not know that this bean is an established variety of great merit. The true pinto is slightly larger than the navy bean, being about the same size and shape as the kidney bean, with a buff colored body splashed with dark brown flecks.

While a staple product of the Southwest, the pinto bean is practically unknown in the North and East, where the navy bean has been the popular favorite. Yet, according to the Colorado experiment station, in food value it is practically identical with the Navy, but being more tender in flesh it cooks more easily. Chemical analysis shows that in the total

calories or fuel value per pound the pinto exceeds other beans, having 1695 units, compared to 1625 for the Lima and 1605 for the Navy.

The pinto being rich in protein is an excellent substitute for meat. A comparison of nutritive values of common foods shows one pound of pintos at 12 cents to be equal to the following:

4.4 pounds raw potatoes at 3½	cents per pound.....	15.44c
1.63 pounds sirloin steak at 30	cents per pound.....	45.64c
2.01 pounds round steak at 23	cents per pound.....	46.23c
18.6 pounds eggs at 35 cents per	dozen.....	54.25c
5.2 pounds (5 pintos) milk at 5	cents per pint.....	26.00c

From a growing standpoint the pinto possesses many advantages. In the first place, it is an excellent sod crop, doing well on new land. It is a safe dry land crop, being a great drouth resister; experienced growers

say that if the pinto produces three leaves it will make beans. It is a splendid preliminary crop, the records showing that every acre planted to pintos last season was sown to winter wheat in the fall. Being staple the pinto is an excellent cash crop, and finally, bean straw makes an excellent protein feed for livestock.

At Akron, Colorado, the public schools were closed for two weeks during the harvesting season to allow the school children to help gather the bean crop. A price of 65 cents for pulling a row one-quarter of a mile long was determined upon, this price being based on the work done by men. When the school boys were turned into the fields they proved better help than the men, one 14 year old boy, Fred Schinkel, making \$72 in six days at the work.

Save Or Starve.

## The Task Before the Nation's Farmers

One billion bushels of wheat must be produced in this country this year.

An enormous increase in the yield of corn and oats is necessary.

Thousands of extra acres must be cultivated. Each individual farmer must produce about one-third more grain than last year.

The task before the nation's farmers is stupendous. Intensive methods of every kind must be employed. Machinery must take the place of muscle wherever possible.

In the face of this emergency the Cleveland Tractor becomes an absolute necessity. Its tremendous value to the farmer is emphasized more than ever.

The Cleveland Tractor not only conserves time and labor—it does far *cheaper* and *better* work. And by doing better work it makes possible the production of larger and better crops—enabling you to do your part for the government—and *make more money for yourself*.

The Cleveland Tractor shows the way. It plows 3½ miles an hour—8 to 10 acres a day. It travels on its own tracks like the great "tanks" of Europe. It will go practically anywhere—through ditches, gumbo, sand and gravel. It is steered by the power of its own engine—simply and easily, and will turn completely around in a twelve-foot circle.

It will not pack the soil, will not mire, will not slip or

flounder. It has 600 square inches of traction surface. The track is designed for long service. The sections are constructed to prevent filling or packing with mud, and protection is provided to prevent dirt and mud from falling into the track. The sections are joined with hardened steel pins which have their bearings in hardened steel bushings. The Cleveland weighs less than 3200 pounds. It can be housed in less space than is required for one horse.

The Cleveland develops 12 h. p. at the drawbar for hauling and gives 20 h. p. at the pulley belt—plenty for stationary work of all kinds.

But in spite of its unusual power, the Cleveland is small and can readily be used in orchards and under and among small fruit trees.

Rollin H. White, the famous motor truck engineer, designed the Cleveland Tractor. He has used only the best materials. Gears are protected by dust-proof, dirt-proof cases and are of the same high quality as those of the finest trucks.

Prepare *now* to produce the enormous crops which we must have—and incidentally make more money for yourself. Get ready *now* for the great tasks before you. Order your Cleveland Tractor *now*.

Write to us for complete information and the name of the nearest Cleveland dealer.
